## FOUNDER & DIRECTOR

**Founder**  
Dr. Prahлад Prasad Srivastava

**Prasad Psycho** was founded in 1973 by **Dr. Prahлад Prasad Srivastava**, the esteemed Founder and former Head of the Department of Psychology and Principal at D.A.V. College, Azamgarh. With a distinguished career spanning over four decades, Dr. Srivastava dedicated his life to advancing the field of psychology.

Driven by his vision to contribute meaningfully to psychological development, he established Prasad Psycho with the mission of delivering world-class psychological assessments and equipment. Over the past 40+ years, the organization has built a strong global presence, serving mental Health professionals, academic institutions, healthcare facilities, and organizations across various sectors.

**Director**  
Dr. Kranti Kumar Srivastava

### Dear Colleagues,

It is with great pride and pleasure that I introduce the **2025 Product Catalogue** of **Prasad Psycho Private Limited**—a comprehensive showcase of our trusted offerings and the latest innovations in psychological assessments and services.

Over the years, we have remained committed to supporting the evolving needs of professionals, institutions, and students in the field of psychology. This catalogue reflects not only the products our customers have come to rely on, but also introduces new tools and resources designed to meet emerging demands in mental health and behavioral sciences.

We are especially excited to announce the launch of our **digital platform, digiConnect**—a forward-thinking initiative that brings psychological assessments into the digital age, offering increased accessibility and efficiency for mental health professionals and their clients.

At Prasad Psycho, we continuously seek to expand our portfolio by collaborating with experts and innovators in the field. If you are developing an assessment tool or psychological resource that aligns with our vision, we encourage you to connect with us early in your development process. Our team is here to support and enhance your project's success.

I would also like to take this opportunity to express my sincere gratitude to our loyal customers and dedicated distributors. Your continued support has enabled us to reach new heights and serve a growing community of professionals worldwide.

We hope this catalogue serves as a valuable resource for your work. Should you have any specialized needs not addressed here, please feel free to reach out. We are always open to customizing solutions and growing together.

With warm regards and best wishes,

Sincerely,

A handwritten signature in blue ink, appearing to read "Kranti Srivastava".

**Dr. Kranti K. Srivastava**  
Director

# Certificate of Compliance

We hereby declare that the technical file of product complied with the requirement of directives Medical Devices Directive 93/42/EEC

## Applicants

Name : PRASAD PSYCHO PRIVATE LIMITED  
Address : B-97, SECTOR-67, NOIDA, GAUTAM BUDDHA NAGAR, UTTAR PRADESH- 201301, INDIA  
Product : MANUFACTURER, PUBLISHER AND DISTRIBUTOR OF LABORATORY APPARATUS (PSYCHOLOGICAL ASSESSMENTS, EQUIPMENT AND SERVICES) AND MEDICAL EQUIPMENTS

## Complies with the requirements applicable to it

The Certification body has performed an audit of the above product quality system covering the design, manufacture and final inspection of the certified product. The quality system has been assessed, approved and is subject to continuous surveillance according to the Medical Devices Directive 93/42/EEC

## This certificate is issued under the following conditions

- It applies only to the quality system maintained in the manufacture of above referenced models and it does not substitute the design or type-examination procedures, if requested.
- The certificate remains valid until the manufacturing conditions or the quality systems are changed.
- The certificate validity is conditioned by positive results or surveillance audits.
- After fulfilling the relevant EU legislation, the manufacturer shall affix to each product, of the above referenced models.
- The CE mark as shown above can be used, under the responsibility of the manufacturer, after completion of a EC Declaration of conformity and compliance with all relevant EEC Directives. The statement is based on a single evaluation of one sample of above mentioned product. It does not imply an assessment of the whole production.

## "Digital Solutions for Smarter Testing"

## About Us

Prasad Psycho digiConnect is an innovative platform that provides digital psychological assessments for mental health professionals and their clients. Our online platform is powered by Prasad Psycho Pvt. Ltd.

## Platform Features

### Individual and Group Assessment

Administer tests to an individual client or a group of persons- derive meaningful insights without any hassle.

### Seamless remote administration

Initiate assessments without the constraints of time and travel. Select from a wide range of assessments and assign it to your client- no constraints of time and place.

### Ensured Data Privacy

Secure data handling with safety check points to ensure your consent throughout the process.

### Pay as you go

Identify the problem, review our array of assessments, discuss with our experts and pay only for the assessments that fulfill your requirements.

### Automated Assessment Report

Writing an assessment report can be time-intensive process. With our platform, you get instant report developed.

## Developmental Assessment of Young Children- 2nd Ed. (DAYC-2)

Judith K. Voress and Taddy Maddox

The DAYC-2 is a popular test used to identify children birth through 5-11 with possible delays in the following domains: cognition, communication, social-emotional development, physical development, and adaptive behavior. Each of the five domains reflects an area mandated for assessment and intervention for young children in IDEA. The domains can be assessed independently, so examiners may test only the domains that interest them or test all five domains when a measure of general development is desired. The DAYC-2 format allows examiners to obtain information about a child's abilities through observation, interview of caregivers, and direct assessment. The DAYC-2 may be used in arena assessment so that each discipline can use the evaluation tool independently.

## PRODUCT OVERVIEW

Product Code: 17-1116-KT

## Gray Diagnostic Reading Tests- 2nd Ed. (GDRT-2)

Brian R. Bryant, J. Lee Wiederholt and Diane P. Bryant

The Gray Diagnostic Reading Tests-Second Edition (GDRT-2) has been revised and updated to reflect current research in reading. The GDRT-2, a revision of the Gray Oral Reading Tests-Diagnostic (GORT-D), along with the Gray Oral Reading Tests-Fourth Edition (GORT-4) and the Gray Silent Reading Tests (GSRT), form the Gray reading test battery. The GDRT-2 assesses students who have difficulty reading continuous print and who require an evaluation of specific abilities and weaknesses. Two parallel forms are provided to allow you to study a student's reading progress over time. Teachers and reading specialists will find this test useful and efficient in gauging reading skills progress. The GDRT-2 has four core subtests, each of which measures an important reading skill. The four subtests are: Letter/Word Identification, Phonetic Analysis, Reading Vocabulary, and Meaningful Reading. The three supplemental subtests, Listening Vocabulary, Rapid Naming, and Phonological Awareness, measure skills that many researchers and clinicians think have important roles in the diagnosis or teaching of developmental readers or children with dyslexia.

## PRODUCT OVERVIEW

## Test of Early Reading Ability - Fourth Edition (TERA-4)

D. Kim Reid, Wayne P. Hresko and Donald D. Hammill

The Test of Early Reading Ability-Fourth Edition (TERA-4) is a direct measure of reading ability in children ages 4-0 through 8-11. Rather than assessing children's "readiness" for reading, the TERA-4 assesses their mastery of early-developing reading skills. The test has three subtests: Alphabet (measures knowledge of the alphabet and its uses), Conventions (measures knowledge of the conventions of print), and Meaning (measures comprehension of print). A composite, called the General Reading Index, represents overall reading ability.

## PRODUCT OVERVIEW

Product Code: 17-1265-KT

₹: 36,190.00

Age Range: 7 - 0 to 17 - 11 yrs

Time Taken: 45 minutes

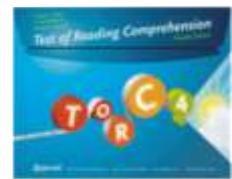

Administration: Individual

## Test of Reading Comprehension- 4th Ed. (TORC-4)

Virginia L. Brown, J. Lee Wiederholt and Donald D. Hammill

The Test of Reading Comprehension – Fourth Edition (TORC-4) is an innovative approach to Testing silent Reading Comprehension that can be used to (a) identify children and adolescents who score significantly below their peers and who therefore might need help in improving their Reading proficiency and Comprehension, (b) document student progress in remedial programs, and (c) serve as a research tool in studies investigating Reading problems in children and adolescents. It was normed on 1,942 students in 14 states. The Test has five subTests, all of which measure word identification and contextual meaning. Studies in the TORC-4 manual indicate that the Test has high reliability and strong validity, especially criterion-prediction validity.

## Test of Silent Word Reading Fluency–2nd Ed. (TOSWRF-2)

Nancy Mather, Donald D. Hammill, Elizabeth A. Allen and Rhia Roberts

The TOSWRF-2 is a companion to the Test of Silent Contextual Reading Fluency–Second Edition (TOSCRF-2). While the TOSWRF-2 measures a student's ability to recognize individual words accurately and efficiently, the TOSCRF-2 measures a student's essential contextual reading abilities (i.e., word identification, word meaning, word building, sentence structure, comprehension, and fluency).

## Feifer Assessment of Reading (FAR™)

Steven G. Feifer, Professional Manual by Steven G. Feifer, Ded and Rebecca Gerhardstein Nader, PhD

The FAR is a comprehensive assessment of reading and related processes. It is unique in that it helps you determine the examinee's specific subtype of dyslexia to inform decisions about appropriate interventions.

### Features and Benefits:

- Addresses four specific subtypes of dyslexia: dysphonetic dyslexia, surface dyslexia, mixed dyslexia, and reading comprehension deficits.
- Comprises 15 individual subtests measuring various aspects of vocabulary, phonological awareness, decoding skills, rapid automatic naming, orthographical processing, morphological processing, word memory, reading fluency (word and story; silent and oral), and comprehension skills.
- Enables you to conduct an item-level skills and error analysis of the examinee's scores on specific subtests and to take a more in-depth look at his or her reading-related behaviors.
- Can be used for an array of purposes, including general screening of dyslexia, progress monitoring of discrete skills for school systems operating in an RTI paradigm, diagnosis of a learning disability as part of a comprehensive psychological evaluation, and design of a deficit- or skill-specific intervention.
- A separate screening form is designed to identify children at risk for developmental dyslexia and measure the underlying processes of reading.

### PRODUCT OVERVIEW

## Dyslexia Early Screening Test–Second Edition (DEST-2)

Rod Nicolson, Angela Fawcett

The Dyslexia Early Screening Test— Second Edition (DEST-2) battery contains screening tests of attainment and ability. It evaluates a range of skills and profiles strengths and weaknesses of the child. The findings will assist in developing the appropriate treatment plan.

### The DEST-2 consists of 12 subtests:

Rapid naming	Bead threading	Phonological discrimination	Postural stability
Rhyme/Alliteration	Forward digit span	Digit naming	Letter naming
Sound order	Shape copying	Corsi frog	Vocabulary

## Dyslexia Screening Test – Junior, India Edition (DST-JINDIA)

Dr Angela Fawcett and Professor Rod Nicolson

"DST-JINDIA is a powerful screener, developed for use with school children in India in order to identify those who are at the risk of dyslexia. The DST-J replaces the best-selling DST and reflects changes in theory and practice since the initial publication with additional subtests, validation studies and case histories.

The India norms will not only facilitate in providing a more precise measure of literacy skills but will provide increased opportunities to a greater number of children to be screened at an early age for the risk of Dyslexia.

The Dyslexia Screening Test series are scientific tests used globally in educational settings to help identify children with Dyslexia. Early identification of this condition will result in timely and effective intervention that will help the child cope with this learning disability better and prepare the child for better academic and professional outcomes."

**Woodcock-Johnson® WJ IV Cognitive Battery, Tests of Cognitive Abilities****Dr. Richard W. Woodcock, Dr. Kevin S. McGrew, and Dr. Nancy Mather**

Supporting a new era of CHC theory, the WJ IV Tests of Cognitive Abilities contain the greatest breadth of cognitive abilities of any standardized body of tests. New tests and clusters have been designed to place emphasis on the most useful measures for identifying individuals' patterns of strengths and weaknesses through seven different broad CHC abilities.

The WJ IV Tests of Cognitive Abilities also offer a new Gf-Gc Composite for comparison with other cognitive abilities, oral language, and achievement.

## PRODUCT OVERVIEW

**Woodcock-Johnson IV Tests of Early Cognitive and Academic Development (ECAD®)****Dr. Fredrick Schrank, Dr. Kevin McGrew & Dr. Nancy Mather**

Woodcock-Johnson® IV tests, ECAD provides a dynamic way for examiners to assess emerging cognitive abilities and academic skills in young children and children with cognitive delays using contemporary, theory-based measures.

ECAD measures general intellectual ability, early academic skills, and oral expression in all children aged 2:6 through 7:11 and children with cognitive developmental delays through age 9:11.

The 10 ECAD tests—4 unique and 6 early forms of WJ IV materials—are all included in one easel. Tests adapted from existing WJ IV content are Sentence Repetition, Sound Blending, Rapid Picture Naming, Picture Vocabulary, Letter-Word Identification, and Writing. Assessment clusters for ECAD can be completed individually or in any combination. Plus, some tests provide information applicable to multiple clusters, offering examiners even more options for test customization.

## PRODUCT OVERVIEW

Product Code: 17-2121-KT

₹: 81,510.00

Age Range: 8-0 to 18-11 yrs

Time Taken: 30 minutes - 2 hours

**Comprehensive Mathematical Abilities Tests - Second Edition (CMAT-2)****Wayne P. Hresko, Paul L. Schlieve, Shelley R. Herron, Colleen Swain & Rita J. Sherbenou**

The Comprehensive Mathematical Abilities Test—Second Edition (CMAT-2) is a highly reliable and valid measure that was designed to assess a broad spectrum of mathematical abilities in the areas of calculation, reasoning, and application.

**CMAT-2 Subtests**

The CMAT-2 has six Core Subtests (Addition; Subtraction; Multiplication; Division; Problem Solving; and Charts, Tables, and Graphs) and six Supplemental Subtests (Algebra; Geometry; Rational Numbers; Time; Money; and Measurement). For most testing purposes, examiners will only need to give the core subtests, which can be administered in about 45 minutes. The Supplemental Subtests are used in those relatively few instances where information about higher-level mathematics ability is needed.

**New Features of the CMAT-2**

- Diagnostic accuracy analyses, which are considered the most rigorous techniques for establishing a test's validity, are included. These analyses involve the computation of sensitivity and specificity indexes and receiver operating characteristic/area under the curve (ROC/AUC) statistics.
- All users now have access to the all-new CMAT-2 Online Scoring and Report System. This system is a quick, efficient tool for (a) entering test session data; (b) converting subtest item scores or total raw scores into scaled scores; (c) generating composite index scores, percentile ranks, and upper and lower confidence intervals; (d) comparing CMAT-2 scores to identify significant intraindividual differences; and (e) obtaining a score summary or narrative report. Use of the software ensures accurate application of basals and ceilings and calculation of scores.

## Test of Word Reading Efficiency- 2nd Ed. (TOWRE-2)

Joseph Torgesen, Richard Wagner and Carol Rashotte

The TOWRE-2 measures an individual's ability to pronounce printed words (i.e., sight word efficiency) and phonemically regular nonwords (i.e., phonemic decoding efficiency) accurately and fluently. Because it can be administered very quickly, the test provides an efficient means of monitoring the growth of these two types of word reading skills, which are critical in the development of overall reading ability. Because both subtests include new word lists, four alternate forms of each subtest are now available, making the test more useful for monitoring progress and evaluating the impact of instructional interventions. The Sight Word Efficiency (SWE) subtest assesses the number of real words that an individual can accurately identify within 45 seconds. Similarly, the Phonemic Decoding Efficiency (PDE) subtest measures the number of pronounceable nonwords that an individual can accurately decode within 45 seconds. The four forms of each subtest are of equivalent difficulty, and any of the forms of each subtest may be given depending on the purposes of the assessment. The manual has been extensively revised and provides new information about the validity and reliability of the TOWRE-2.

## Bruininks Motor Ability Test (BMAT)

Brett D. Bruininks, PhD, Robert H. Bruininks, PhD

The Bruininks Motor Ability Test (BMAT)—an individually administered, standardized test of gross and fine motor skills for adults. It's an adaptation of the trusted Bruininks-Oseretsky Test of Motor Proficiency, Second Edition (BOT™-2), widely used for ages 4 through 21. The BMAT is ideal for professionals in occupational and physical therapies, nursing, human performance, and physical rehabilitation to determine if clients' motor function issues need to be addressed before they can live independently. The BMAT also helps you set treatment goals and monitor progress. What's more, you can repeat administrations over the course of treatment and adjust goals as needed.

#### Subtests include:

Fine Motor Integration  
Balance and Mobility

Manual Dexterity  
Strength and Flexibility

Coordination

### PRODUCT OVERVIEW

## Bruininks-Oseretsky Test of Motor Proficiency Second Edition (BOT-2)

Brett D. Bruininks, PhD, Robert H. Bruininks, PhD

The BOT-3 measures a broad array of fine and gross motor skills. Eight core subtests and one supplementary subtest allow for in-depth assessment of motor abilities and identification of areas of relative strength. With the BOT-3, you can assess the motor development and proficiency of individuals from school age to early adulthood, ranging from those who are typically developing to those with mild to moderate motor challenges. Support diagnosis of motor impairments, inform further evaluation, goal-setting, and interventions. Develop and evaluate motor training programs.

## DTVP-3: Developmental Test of Visual Perception- 3rd Ed.

Donald D. Hammill, Nils A. Pearson and Judith K. Voress

The DTVP-3 is the most recent revision of Marianne Frostig's popular Developmental Test of Visual Perception. Of all the tests of visual perception and visual-motor integration, the five DTVP-3 subtests are combined to form three composites: Motor-reduced Visual Perception, Visual-Motor Integration, and General Visual Perception (combination of motor-reduced and motor-enhanced subtests). Subtests were assigned to a particular composite on the basis of the amount of motor ability required by their formats.

## Full Range Test of Visual Motor Integration (FRTVMI)

Donald D. Hammill, Nils A. Pearson, Judith K. Voress and Cecil R. Reynolds

For use by psychologists, educational diagnosticians, learning disability specialists, OTs and PTs, as well as teachers and counselors, the Full Range Test of Visual-Motor Integration (FRTVMI) is a highly reliable, valid measure of visual-motor integration skills that not only covers the full range of school ages but, unlike most other tests of VMI, includes norms appropriate for special education students in the 19-21 year age range. Its norms include adults as well as children and adolescents (i.e., a full range of individuals from 5 years through 74 years can now be assessed with a common test.)

The FRTVMI assesses the ability to accurately relate visual stimuli to motor responses. The purposes of giving the test include: (1) documenting the presence and degree of visual-motor problems in individuals, (2) identifying candidates for referral, (3) verifying the effectiveness of intervention programs, and (4) serving as a research tool. The test requires the person being tested to copy a series of increasingly complicated designs.

## Young Children's Achievement Test (YCAT)-2

Wayne P. Hresko, Pamela K. Peak, Shelley R. Herron and Deanna L. Bridges

Research has shown that the best predictor of later academic success is early academic ability and that direct, early intervention prevents or ameliorates potential academic problems. The YCAT is a quick, reliable, and valid instrument that helps determine early academic abilities. It is designed for use with preschool, kindergarten, and 1st-grade children ages 4-7.11 years. Primary uses are to identify children who are developing normally or significantly below their peers in academic achievement, to document educational progress, and for research. Yields an overall Early Achievement standard score. Includes five subtests that may be administered independently of each other, providing flexible scheduling for testing sessions: General Information, Mathematics, Reading, Writing, Spoken Language. Standard scores, percentiles, and age equivalents are provided for both the subtests and the composite. For the 4- and 5-year-old child, the YCAT is an accurate representation of a child who has received no (or minimal) formal instruction; for the older child, the YCAT represents how the child has benefited from formal academic instruction in school. Normed on 1,224 children from 32 states and the District of Columbia. High reliability and validity.

## BAYLEY-4 Complete Kit

Nancy Bayley, PhD Glen P. Aylward, PhD.

Bayley Scales of Infant and Toddler Development™, Fourth Edition (Bayley™-4) assesses infant and toddler development across five scales: Cognitive, Language, Motor, Social-Emotional, and Adaptive Behavior. Assessment of the Cognitive, Language, and Motor domains is accomplished by administering structured items to the child, and engaging the caregiver to support responses where appropriate. The Social-Emotional and Adaptive Behavior scales are administered via caregiver questionnaire which allows them to share their own observations of the child's abilities

## Bayley-4 Screening Test Kit

Nancy Bayley, PhD Glen P. Aylward, PhD.

The Bayley-4 screening test can quickly examine all facets of a young child's development. The updated Bayley-4 Screening Test features:

Cognitive, language, and motor domains  
Child-friendly, playful activities  
Cost-effective

Fast and easy administration  
Cut scores according to age

## Diagnostic Achievement Battery–4th Ed: Complete Kit (DAB-4)

Phyllis Newcomer

The DAB-4 is a revision of one of the most popular individual achievement tests available. Its 8 subtests identify students' strengths and weaknesses across important areas of school achievement. A supplemental manual shows how to probe student responses to obtain information about students' thinking processes and problem-solving strategies. Subtests of the DAB-4, Listening Comprehension, Synonyms, Alphabet/Phonics/Word Identification, Reading Comprehension, Punctuation/Capitalization, Spelling, Mathematics Reasoning, Mathematics Calculation.

Time Taken: 10–25 minutes for ages 6–7 and 30–40 minutes for ages 8 and up

Administration: Individual

Language: English, Hindi, Marathi, Kannada and Tamil

## Youth's Inventory-4 (YI-4)

Kenneth D. Gadow and Joyce Sprafkin

The Youth's Inventory-4 (YI-4) is a self-report rating scale that helps to evaluate DSM-IV emotional and behavioral disorders in youths. Responses to the YI-4 can provide valuable insight into the youth's perceptions of his or her problems. The YI-4 contains 120 items that correspond to those in the Adolescent Symptom Inventory-4 and includes the symptoms of 18 disorders. The YI-4 can be scored to derive Symptom Count scores (diagnostic model) or Symptom Severity scores (normative data model). Scoring is quick and easy with user-friendly score sheets. The norm sample (N=573) consists of youths between 12 and 18 years old who attend public middle and secondary schools. T scores and raw scores are presented on Symptom Severity Profile score sheets.

## Test of Visual-Perceptual Skills (Non-motor), TVPS-4

Nancy A. Martin

The TVPS-3 assesses the following visual perceptual skills: Visual Discrimination, Visual Memory, Visual-Spatial Relationships, Form Constancy, Visual Sequential Memory, Visual Figure-Ground, and Visual-Closure. It is designed to be used by psychologists, occupational therapists, education diagnosticians, developmental optometrists, learning specialists, and other assessment professionals. The TVPS-3 utilizes black and white designs as stimuli for all of the perceptual tasks. Within each area, the items are arranged in a developmental progression. The items are presented in a multiple-choice format; item responses are made vocally or by pointing. This format is ideal for children who may have impairments in speech; hearing; or motor, neurological, or cognitive functioning. The TVPS-3 contains 16 plates for each perceptual area; each area is normed separately so that the clinician may reliably differentiate the various visual perceptual processes. The plates are spiral bound with fold-out easels to make presentation easy. The Manual includes a completed and scored protocol for instructional purposes. Analysis of the subtest score patterns provides functional comparisons that enable the clinician to make a comprehensive diagnosis of a child's perceptual abilities separate from motor skills. The TVPS-3 also provides new, nationally stratified norms based on data from more than 2,000 children and adolescents.

## Roberts-2 (KIT)

Glen E. Roberts

In evaluating children, it makes sense to look at more than academic ability and achievement. Social understanding, problem-solving skills, adaptability, sources of support, emotional adjustment, developmental issues--all of these things affect children's functioning at school, at home, and in the community. This revision of the popular Roberts Apperception Test for Children helps you understand the whole child. The Roberts-2 provides useful descriptive information, telling you how well the child reads social cues, recognizes and solves interpersonal problems, copes with difficulties, makes use of social and emotional resources, and much more. The test focuses on the child's social understanding as expressed in free narrative, reflecting both developmental and clinical concerns. It asks the child or adolescent to tell a story in response to each of 16 Test Pictures (available in three parallel sets--one showing White children, one featuring Black children, and one depicting Hispanic children). The child's stories are recorded and then scored--according to objective criteria--for the presence or absence of specific characteristics. The sample is representative in terms of gender, ethnicity, and parental education. The Roberts-2 Manual offers extensive examples of children's stories, along with scoring instructions. It provides evidence of the test's validity, based on comparisons between the standardization sample and a clinically referred sample of 467 children and adolescents.

## Feifer Assessment of Mathematics (FAM) Comprehensive Kit

Steven G. Feifer, DEd; Professional Manual by Steven G. Feifer, DEd, and Heddy Kovach Clark, PhD

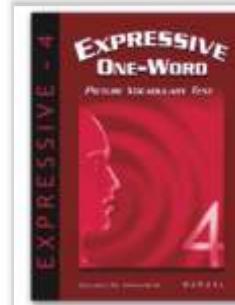

The FAM is a comprehensive assessment of mathematics designed to examine the underlying neurodevelopmental processes that support the acquisition of proficient math skills. It not only helps determine if an examinee has a math learning disability (MLD) but also identifies the specific subtype of dyscalculia, which better informs decisions about appropriate interventions.

## Expressive One-Word Picture Vocabulary Test- 4 (EOWPVT- 4)

Nancy A. Martin and Rick Brownell

The EOWPVT-4 is an individually administered, norm-referenced assessment of how well individuals can name (in English) objects, actions, or concepts presented in full-color pictures. The EOWPVT-4 features additional items for younger children, as well as items applicable to older adults. It also now features norms for elderly adults (80+ years). The test consists of 190 items presented in a developmental sequence (based on the 2010 normative sample) that reflects the concepts with which people currently have experience through home, school, or media. The expanded norms allow for the use of the test with adults in various diagnostic, rehabilitation, and therapeutic settings. The EOWPVT-4 has been co-normed with the ROWPVT-4 to provide a comprehensive assessment of expressive and receptive vocabulary. The EOWPVT-4 is untimed and can be administered in about 20 minutes. Scoring is easy and straightforward, generally taking less than 5 minutes. Raw scores are reported as standard scores, percentile ranks, and, if necessary, age equivalents.

## Woodcock-Johnson® IV Tests of Achievement Kit

Richard W. Woodcock, Kevin S. McGrew and Nancy Mather

The WJ IV Tests of Achievement are ideal for accurately screening, diagnosing, and monitoring progress in reading, writing, and mathematics achievement areas.

The Achievement battery is available in three forms (A, B, C) with parallel content, providing the means to monitor progress two to three times per year once a proficiency level is established and interventions are implemented with a student. The parallel forms also provide flexibility to examiners who wish to alternate the three forms to reduce examinees' familiarity with test content.

## Clark-Beck Obsessive-Compulsive Inventory (CBOCI)

David Clark, Aaron T. Beck

Clark-Beck Obsessive-Compulsive Inventory (CBOCI) is a reliable measure of Obsessive-Compulsive Disorder. It is an efficient and accurate screener designed to identify obsessive and compulsive symptoms in individuals ages 17 and older. The 25-item CBOCI was developed to provide you with an efficient, yet comprehensive and precise, self-report screening instrument for OCD. It can be completed in just 10 to 20 minutes and includes 11 items that assess obsessive behaviors and 14 items that assess compulsive behaviors. Once the presence of symptoms has been established, you can follow up with a more intensive diagnostic interview.

## Children's Measure of Obsessive-Compulsive Symptoms (CMOCS)

Cecil R. Reynolds and Ronald B. Livingston

Obsessive-Compulsive Disorder (OCD) is relatively common in children and teens, and its impact on daily functioning can be severe. Yet until now it has been difficult to assess--those who suffer from OCD tend to hide their symptoms; comorbid conditions often obscure its presence; and existing OCD instruments have been limited by inadequate normative and psychometric data. A Self-Report Measure That's Brief, Easy to Use, and Well Normed. The new Children's Measure of Obsessive-Compulsive Symptoms (CMOCS) assesses and quantifies the subjective experience of children and teens who have obsessions and/or compulsions at either a clinical or subclinical level.

## Academic Achievement Battery™ (AAB™) comprehensive Form

Melissa A. Messer, MHS

The AAB is a complete achievement assessment, offering both a comprehensive battery and a screening version for use with individuals throughout the life span.

### Features and benefits:

Developed using academic standards set by the National Council of Teachers of Mathematics, the National Council of Teachers of English, Common Core, and Reading First. Administration and scoring are straightforward and easy—and both comprehensive and screening versions have a Fast Guide to help you get started. Unlike similar measures, the AAB requires no certification or intensive preparation—simply open your AAB kit and review the materials, and you will be ready to begin assessment. Provides age- and grade-based (Fall and Spring) norms. Scoring is available through PARiConnect; stimuli are available digitally. Comprehensive Form Can be administered in about 90 minutes and scored in 15 minutes. The Academic Achievement Battery Composite, a total score, provides an overview of the individual's overall performance on the various aspects of achievement measured by the AAB. A skills analysis enables you to investigate the individual's strengths and weaknesses and offers a wealth of data with which to make interpretations and recommendations. Provides composite-to-composite and subtest-to-subtest discrepancy scores and reliable change scores

## Psycho educational Profile- 3rd Ed. (PEP-3)

Eric Schopler, Margaret D. Lansing, Robert J. Reichler and Lee M. Marcus

The function domains for the PEP-3 have been revised to reflect current research and clinical concerns, especially in the area of social and communication functions. The test yields 3 composite scores (Communication, Motor, and Maladaptive Behaviors) and features 10 Performance Subtests: Cognitive Verbal/Preverbal, Expressive Language, Receptive Language, Fine Motor, Gross Motor, Visual-Motor Imitation, Affective Expression, Social Reciprocity, Characteristic Motor Behaviors and Characteristic Verbal Behaviors. The PEP-3 now includes a Caregiver Report that asks the parent or caregiver to estimate the child's developmental level compared with typical children. The report consists of three subtests: Problem Behaviors, Personal Self-Care, and Adaptive Behavior. This form has been shown to help orient teachers to a student's developmental inconsistencies and provides professionals with information needed for thorough and complete planning. In addition, the PEP-3 is helpful in identifying special learning strengths and teachable skills.

## The Carolina Curriculum for Infants and Toddlers with Special Needs (CCITSN), Third Edition

Nancy M. Johnson-Martin

The Carolina Curriculum for Infants and Toddlers with Special Needs, Third Edition is one of the two volumes of the The Carolina Curriculum, an assessment and intervention program designed for use with young children from birth to five years who have mild to severe disabilities. Developed for use with children from birth to 36 months, the CCITSN is an easy-to-use, criterion-referenced system that clearly links assessment with intervention and lets professionals work closely with the child's teachers, family members, and other service providers. Already trusted by thousands of early childhood professionals from coast to coast, this proven system is even easier to use with the revisions and updates in this third edition.

## The Carolina Curriculum for Preschoolers with Special Needs (CCPSN), Second Edition

Nancy M. Johnson-Martin

The Carolina Curriculum for Preschoolers with Special Needs, Second Edition is one of the two volumes of the The Carolina Curriculum, an assessment and intervention program designed for use with young children from birth to five years who have mild to severe disabilities. Developed for use with children from 24 to 60 months, the CCPSN is an easy-to-use, criterion-referenced system that clearly links assessment with intervention and lets professionals work closely with the child's teachers, family members, and other service providers. Already trusted by thousands of early childhood professionals from coast to coast, this proven system is even easier to use with the revisions and updates in this third edition.

## Child Symptom Inventory (CSI-4): Deluxe Kit

Kenneth D. Gadow and Joyce Sprafkin

The CSI-4 Norms Kit describes an alternative scoring procedure for rating symptom severity that is based on normative data. The Child Symptom Inventory-4 (CSI-4) is a behavior rating scale that screens for DSM-IV emotional and behavioral disorders in children. The CSI-4: Parent Checklist contains 97 items that screen for 15 emotional and behavioral disorders, and the CSI-4: Teacher Checklist contains 77 items that screen for 13 emotional and behavioral disorders. The CSI-4 can be scored to derive Symptom Count scores (diagnostic model) or Symptom Severity scores (normative data model). Scoring is quick and easy with user-friendly score sheets.

## Marshalla Oral Sensorimotor Test (MOST)

Pam Marshalla

The Marshalla Oral Sensorimotor Test (MOST) is a comprehensive and quick assessment designed to put a numerical value on oral movement, oral-tactile sensitivity, facial and oral tone, as well as basic respiration, phonation, and resonance skills. The MOST is the first exam to allow speech-language pathologists an opportunity to place a numerical value on the oral exam. It identifies jaw, lip, and tongue movement problems. It is optimal for children with concomitant feeding difficulties, neurological deficits, developmental disorders, and sensory processing disorders.

## Pediatric Behavior Rating Scale™ (PBRSTM)

Richard M. Marshall and Berney J. Wilkinson

The PBRST is a standardized, norm-referenced parent and teacher rating scale that assists in the identification of symptoms associated with early onset bipolar disorder. The instrument also aids in identifying comorbid disorders as well as in differentiating disorders that have similar symptoms and behavioral characteristics. Rather than rendering a clinical diagnosis, the PBRST focuses on symptom identification and profile analysis. It uses a multi-informant approach. Assists in identifying comorbid disorders and differentiating disorders that have similar symptoms and behavioral characteristics. The PBRST has numerous applications in clinical, educational, and research settings.

## Arizona Articulation and Phonology Scale Fourth Revised (Arizona-4)

Janet B. Fudala • Sheri Stegall

The Arizona Articulation and Phonology Scale—Fourth Edition measures speech intelligibility, articulatory impairment, and phonological impairment in one quick, easy to use assessment. The fourth edition of this widely used assessment retains the strengths of its predecessors and adds features that enhance its effectiveness in identifying individuals who have speech sound disorders. New norms, refined measurement properties, and the addition of connected-speech and phonology tests help clinicians identify individuals who may benefit from speech sound services. Supplemental qualitative tasks facilitate deeper interpretation of the scores and help clinicians develop treatment plans that are targeted to the individuals needs.

## Social Communication Questionnaire (SCQ)

Michael Rutter, Anthony Bailey and Catherine Lord

The Social Communication Questionnaire is available in two forms--Lifetime and Current--each composed of just 40 yes-or-no questions. Both forms can be given directly to the parent, who can answer the questions without supervision. The Lifetime Form focuses on the child's entire developmental history, providing a Total Score that's interpreted in relation to specific cutoff points. This score identifies individuals who may have autism and should be referred for a more complete evaluation--with the Autism Diagnostic Interview-Revised (ADI-R) or the Autism Diagnostic Observation Schedule (ADOS), for example. SCQ content parallels that of the ADI-R, and the agreement between SCQ and ADI-R scores is high and substantially unaffected by age, gender, language level and performance IQ.

## Autism Screening Instrument for Educational Planning- 3rd Ed. (ASIEP-3)

David A. Krug, Joel R. Arick and Patricia J. Almond

The Autism Screening Instrument for Educational Planning—Third Edition (asiep-3) is a valid and reliable measure of autism and related behaviors. It was designed to identify individuals with autism; assist in planning appropriate educational programs for those individuals; monitor performance and progress; and research autism. Necessary data is collected from five main standardized components: Autism Behavior Checklist, Sample of Vocal Behavior, Interaction Assessment, Educational Assessment and Prognosis of Learning Rate.

## PDD Behavior Inventory™ (PDDBI™) Comprehensive Kit

Ira L. Cohen and Vicki Sudhalter

Unlike existing assessments for autism/PDD, the PDD Behavior Inventory was developed to assess both problem behaviors as well as appropriate social, language, and learning/memory skills. It was also designed to provide age-standardized scores for both parent and teacher ratings. The PDD Behavior Inventory can be utilized across a variety of settings. For example, it can be used as a clinical tool for assisting in diagnosis and treatment recommendations and for assessing change over time. In addition, the PDD Behavior Inventory can be useful in educational settings (e.g., placement decisions, intervention planning, evaluating outcomes) and research applications (e.g., dependent measure for treatment intervention).

## Jordan Left-Right Reversal Test - 3 (Jordan-3)

Brian T. Jordan, PhD

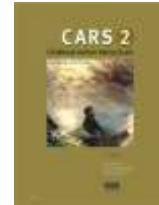

The Jordan Left-Right Reversal Test-3rd Edition (2011) helps clinicians identify students who have difficulty with reversals, and what types of reversals are problematic: objects, letters, numbers, words, or letter sequences. The JLRRT-3 now has two parts consisting of five subtests, in developmental sequence. Although the test is for individuals 5 years to 19 years, children 5 years to 8 years take Part 1 only. The first and last subtests are new, line drawings and letter sequences, respectively. The remaining three subtests are letters and numbers, words, and words in sentences. A Remedial Checklist provides suggested remediation activities. The JLRRT-3 can be administered to individuals or small groups. Norm-referenced, two scores are derived: Correct Responses (reversals correctly identified) and Errors (nonreversed items that were incorrectly identified as reversals, plus reversals that were not identified). Both scores are converted to percentile ranks and interpreted using cutoff scores based on score frequencies in the normative sample. Age equivalents are also provided.

## Childhood Autism Rating Scale- 2nd Ed. (CARS 2)

Eric Schopler, Robert J. Reichler and Barbara Rochen Renner

CARS Second Edition expands the test's clinical value, making it more responsive to individuals on the "high-functioning" end of the autism spectrum--those with average or higher IQ scores, better verbal skills, and more subtle social and behavioral deficits. While retaining the simplicity, brevity, and clarity of the original test, the CARS2 adds forms and features that help you integrate diagnostic information, determine functional capabilities, provide feedback to parents, and design targeted intervention. The CARS2 includes three forms: Standard Version Rating Booklet (CARS2-ST), Equivalent to the original CARS; for use with individuals with communication difficulties or below-average estimated IQ's, High-Functioning Version Rating Booklet (CARS2-HF), An alternative for assessing verbally fluent individuals, 6 years of age and older, with IQ scores above 80.

## Screening and Diagnostic Test of Dyslexia -J

Dr. Zeenat Khan & S. B. Dandegaonkar

This test is meant for screening and diagnosing the most probable cases of dyslexia among the school going children of age group of 9-12 yrs. this dyslexia test is divided in two main parts, screening and diagnostic test of dyslexia. In the first part the students are screened by using the rapid picture recall test, memory, malin's intellegence test, phonetics test, vocabulary test. In the second part the specific test of dyslexia is used to diagnose the problem of dyslexia. The following subtest are used like motor coordination skill test, reading test, wrirting test, spelling test, polysyllable test, month forward /backward, left/right test, b/d problem test, digit forward backward test, homonym test, mathematical table recalling test, mathematical operation test. There are total 16 subtests.

## Gilliam Asperger's Disorder Scale (GADS)

James E. Gilliam

The Gilliam Asperger Disorder Scale is a norm referenced test designed to evaluate children with unique behavioral problems who may have Asperger's Disorder. Based on the most current and relevant definitions and diagnostic criteria of Asperger's Disorder, the GADS is useful for contributing valuable information toward the identification of children who have this disorder. Easily completed by a parent and professional who knows the child, the GADS provides documentation about the essential behavior characteristics of Asperger's Disorder necessary for diagnosis. It can be used with confidence in the assessment process, documenting behavioral progress, targeting goals for IEPs, and for research purposes. The validity of the GADS was demonstrated by (a) confirming that the items of the test are directly related to the definitions of Asperger's Disorder; (b) the subscales are strongly related to each other and the overall diagnosis of Asperger's Disorder; and (c) the GADS scores discriminate persons with Asperger's Disorder from persons with autism and other behavioral disorders.

## Test of General Reasoning Ability™ (TOGRA™)

Cecil R. Reynolds, PhD

The TOGRA is a speeded measure of reasoning ability and problem-solving skills designed for individual or group administration.

**Features and benefits:** As a result of extensive expert review and statistical analysis, the TOGRA's racial, gender, and religious bias is minimal—ideal for any measure used for selection purposes. Offers a wider variety of item content and greater test score stability than competing measures. Yields a General Reasoning Index (GRI), a highly reliable score that reflects overall measurement of the general factor of reasoning and problem-solving skill. Consists of items that assess verbal, nonverbal, and quantitative reasoning and problem-solving skills through tasks that are inductive as well as deductive in nature. Requires only 16 minutes for administration and 2-3 minutes for scoring. Administration and scoring are available through PARiConnect.

**Test structure:** Two equivalent alternate forms (Blue and Green) enable you to retest and monitor progress without worrying about practice effects. Can be administered to groups or individuals using a computer or traditional paper and pencil. This flexibility makes the TOGRA a viable option for use in human resource and related industrial settings, schools, juvenile and adult justice systems, and clinical settings.

## Evaluating Acquired Skills in Communication- 3rd Ed. (EASIC-3)

Anita Marcott

Evaluating Acquired Skills in Communication—Third Edition (EASIC-3) is a five-level inventory developed for use with children who are developmentally disabled, have autism, or have moderate to severe cognitive and language disorders. It provides assessment items in the areas of prelinguistic skills, semantics, syntax, morphology, and pragmatics. Examiners can use this systematic tool to:

- evaluate students' communication skills,
- record their performance,
- translate assessment data into appropriate goals and objectives for IEPs.

## Aston Index

Dr. Margaret Newton and Michael Thomson

Comprehensive, tried and tested battery of assessments for screening and diagnosing language difficulties. It contains sixteen tests, which enable you to measure an individual pupil's general underlying ability and attainment with reference to the child's mental age. It also examines the pupil's strengths and weaknesses in visual and auditory discrimination, motor co-ordination, written language, reading and spelling.

## Developmental Profile- Fourth Edition (DP-4)

Gerald D. Alpern

This fully revised third edition of the Developmental Profile strengthens and updates an instrument already considered the best of its kind. Like previous versions, the DP-3 evaluates children's functioning in five key areas. However, this edition adds norm-based standard scores, an expanded age range, updated item content, clearer interpretive guidelines, a nationally representative standardization sample, new empirical studies demonstrating its reliability and validity, and unlimited computer scoring and interpretation. The DP-3 provides a General Development score as well as the following scale scores: Physical, Adaptive Behavior, Social-Emotional and Communication.

## Draw-A-person Intellectual Ability Test for Children Adolescents and Adults (DAP:IQ)

Cecil R. Reynolds and Julia A. Hickman

The Draw-A-Person Intellectual Ability Test for Children, Adolescents, and Adults (DAP:IQ) provides a common set of scoring criteria to estimate intellectual ability from a human figure drawing. Until now, measurement of cognitive ability by scoring drawings of human figures focused mainly on children and adolescents. The DAP:IQ applies this form of evaluation to adults as well, allowing for a more direct, continuous measurement of a common construct across the age range. The DAP:IQ improves the practice of evaluating human figure drawings (HFDs) as a measurement of cognitive ability by scoring elements representative of universal features of the human figure. The collection of a HFD is easily standardized with a set of simple, easily understood instructions, and requires a very short period of time.

## Pediatric Developmental Screening Test (PDST)

Amita Puri and Dwarka Pershad

It aims to assess development of children in the four areas – Gross Motor, Fine Motor, Language and Personal-Social. It is a precise test to screen out developmental delays. It is suitable for children up to the maximum developmental age of 36 months. It was standardized on 821 normal healthy children.

## Behavioural Checklist for Screening the Learning Disabled (BCSLD)

Smriti Swarup and Dharmishta H. Mehta

It is a screening tool which advocates use of other diagnostic tools for the assessment and determination of learning disability in the child. The checklists consist of 30 items, positive and negative, to be filled in by the teacher. It covers eight areas, each representing a deficit in a particular ability, and gives us insight into the mental make-up, attempting to explain the reason for the child's under-achievement. It has been standardized on 1000 children from ages 8-11 years. 300 teachers also constituted the sample.

**Motor-Free Visual Perception Test- 4th Ed. (MVPT-4)****Ronald P. Colarusso and Donald D. Hammill**

The MVPT-3 can be used for screening as well as diagnostic and research purposes by teachers, psychologists, educational specialists, rehabilitation therapists, and others who need a quick, highly reliable, and valid measure of overall visual-perceptual processing ability in children and adults. The MVPT-3 measures skills without copying tasks. It contains many new, more difficult items at the upper end for older children and adults. Tasks include matching, figureground, closure, visual memory, and form discrimination.

**Beery-Buktenica Developmental Test of Visual-Motor Integration, Sixth Edition, The (BEERY™ VMI) Starter Kit****Keith E. Beery, PhD, Norman A. Buktenica, Natasha A. Beery**

The Beery VMI, now in its sixth edition, offers a convenient and economical way to screen for visual-motor deficits that can lead to learning, neuropsychological, and behavior problems. Help parents better understand their child's current level of development using age norm information. The manual also presents teaching suggestions. Identify individuals who may be encountering difficulties in visual-motor integration. Use with individuals of diverse environmental, educational, and linguistic backgrounds as a culture-free, non-verbal assessment. Supplemental Visual Perception and Motor Coordination tests use the same stimulus forms as the Short Format and Full Format tests.

**Phonological Assessment Battery: 2nd Edition Primary (PhAB 2)****Norah Frederickson, Uta Frith and Rea Reason**

PhAB2 Primary offers a comprehensive battery of tests that help assess phonological awareness in children aged 5-11 years. An essential toolkit for SENCOs, specialist teachers and educational psychologists, it helps identify the phonological difficulties some children encounter in learning to read. In turn, this allows appropriate intervention to be provided to help improve underlying literacy skills.

This latest edition has been newly standardised, and in addition to the original subtests, PhAB2 Primary also includes four new subtests that reflect the latest research in phonological awareness.

**Mullen Scales of Early Learning****Eileen M. Mullen**

Mullen Scales of Early Learning is a developmentally integrated system that assesses language, motor, and perceptual abilities, measures cognitive ability and motor development quickly and reliably.

**Benefits:**

Five scales provide a complete picture of cognitive and motor ability

Pinpoints strengths and weaknesses

Ideal for assessing school readiness

## Diagnostic Test of Learning Disability (DTLD)

Smriti Swarup and Dharmishta H. Mehta

The test diagnoses learning disability in ten areas—from Auditory/Visual Perception to Cognitive areas. It consists of 10 sub-tests. It is to be individually administered on the age group 8-11 years old. A deficit in any of the area or areas or a combination of any, would lead to a learning problem. The test was standardized on a sample of 1050 children with the age range of 8-11 years. Eye-hand Coordination, Figure Ground Perception, Figure Constancy, Position-in-Space, Spatial Relations, Auditory Perception, Memory, Cognitive Abilities, Receptive Language, Expressive Language.

## Griffiths Scales of Child Development, Third Edition

Elizabeth Green, Louise Stroud, Susan Bloomfield, Johan Cronje, Cheryl Foxcroft

Griffiths III is the product of a thorough re-standardisation of the Griffiths Mental Development Scales (GMDS) – described as the 'gold standard' in child development testing. It is a comprehensive, child-friendly developmental measure for continuous use from birth to 6 years (72 months).

Griffiths III provides an overall measure of a child's development, as well as an individual profile of strengths and needs across five areas:

- Foundations of Learning
- Eye and Hand Coordination
- Gross Motor
- Language and Communication
- Personal—Social—Emotional

## Birth - Three Assessment and Intervention System- 2nd Ed. (BTAIS-2) Combo

Jerome J. Ammer and Tina Bangs

The Birth to Three Assessment and Intervention System—Second Edition (BTAIS-2) is now completely revised and updated to provide examiners with an integrated, threecomponent system for screening, assessing, and intervening with children. First, the Screening Test of Developmental Abilities (STDA) can be used to quickly identify young children who may have developmental delays. This norm-referenced instrument contains 85 items for identifying problems in the following areas: Language Comprehension, Language Expression, Nonverbal Thinking, Social/Personal Development, and Motor Development. Second, those children identified as delayed can be tested with the Comprehensive Test of Developmental Abilities (CTDA), a criterion-referenced measure built to identify each child's specific strengths and weaknesses, and to guide the preparation of instructional plans. This measure was built to assess children in the following areas: Language Comprehension, Language Expression, Nonverbal Thinking, Social/Personal Development and Motor Development

## Diagnostic Test of Reading Disorder (DTRD)

Smriti Swarup and Dharmishta H. Mehta

Perceptual and cognitive deficits, assumed to be the underlying causes for the reading, writing problems, in the learning disabled provided the base for the development of the Diagnostic Test of Reading Disorders. The test identifies and diagnoses the process deficits that cause disorders in both fluency and accuracy of reading. It is an individually administered instrument. Each child has to be administered both Level I and Level II tests. It was standardized on a sample of 1100 school going boys and girls in the age range of 8-11 years. It is a non-timed test.

**Autism Diagnostic Observation Schedule, Second Edition: ADOS-2****Catherine Lord, Michael Rutter, Pamela C. DiLavore, Susan Risi, Katherine Gotham, Rhiannon J. Luyster, Whitney Guthrie and Somer L. Bishop**

This revision improves an instrument already viewed as "the gold standard" for observational assessment of autism spectrum disorder (ASD). With updated protocols, revised algorithms, a new Comparison Score, and a Toddler Module, the ADOS-2 provides a highly accurate picture of current symptoms, unaffected by language. It can be used to evaluate almost anyone suspected of having ASD--from 1-year-olds with no speech to adults who are verbally fluent. Like its predecessor, the ADOS-2 is a semi-structured, standardized assessment of communication, social interaction, play, and restricted and repetitive behaviors. It presents various activities that elicit behaviors directly related to a diagnosis of ASD. By observing and coding these behaviors, you can obtain information that informs diagnosis, treatment planning, and educational placement. The individual being evaluated is given only one module, selected on the basis of his or her expressive language level and chronological age. Following guidance provided in the manual, you choose the module that's appropriate for the individual you're evaluating. Toddler Module--for children between 12 and 30 months of age who do not consistently use phrase speech Module 1--for children 31 months and older who do not consistently use phrase speech Module 2--for children of any age who use phrase speech but are not verbally fluent Module 3--for verbally fluent children and young adolescents Module 4--for verbally fluent older adolescents and adults

## Goal-Oriented Assessment of Lifeskills™ (GOAL™)

Lucy Jane Miller, PhD, OTR, Thomas Oakland, PhD

The Goal-Oriented Assessment of Lifeskills (GOAL) is an innovative new evaluation of functional motor abilities needed for daily living. Designed for children 7 to 17, the GOAL consists of seven Activities, fun and motivating tasks based on real occupations of a child's daily life. Each Activity is linked to Intervention Targets that help you turn assessment results into a specific, goal-oriented treatment plan. This standardized, psychometrically precise instrument offers an ecologically valid description of a child's competencies and opportunities for growth in both fine and gross motor domains.

### PRODUCT OVERVIEW

Product Code: 27-0076-KT

₹: 62,590.00

Age Range: 7 - 17 yrs

Time Taken: 45-60 minutes

Administration: Individual

Language: English

The GOAL can help determine eligibility for special services and inform planning of occupational and/or physical therapy and adaptive physical education. It's useful in a variety of settings, including schools, clinics, hospitals, and private practice. Although intended primarily for occupational therapists, it can be used by other professionals, including psychologists, physical therapists, and other childhood intervention specialists.

## Behavior Assessment System for Children, Third Edition (BASC-3)

### HANDSCORE STARTER KIT (PRINT)

Cecil R. Reynolds, PhD, Randy W. Kamphaus, PhD

Help children thrive in their school and home environments with effective behavior assessment. The Behavior Assessment System for Children (BASC) holds an exceptional track record for providing a complete picture of a child's behavior. School and clinical psychologists have depended on BASC for more than 20 years. Now, renowned authors Drs. Cecil Reynolds and Randy Kamphaus present their latest edition of this excellent measure—BASC-3.

### PRODUCT OVERVIEW

₹: Price on Request

Age Range: 2:0 - 21:11 (TRS and PRS); 6:0 through college age (SRP)

Time Taken: 10-15 minutes

Administration: Individual

Language: English

BASC-3 provides the most comprehensive set of rating scales. These scales measure areas important for both IDEA and DSM-5 classifications. Best of all, you receive the most extensive view of adaptive and maladaptive behavior.

## Adaptive Behavior Assessment System- 3rd Ed. (ABAS-III)

Patti Harrison and Thomas Oakland

Widely used to evaluate people with intellectual and developmental disabilities, the ABAS-II assesses adaptive behavior in individuals from birth to 89 years of age. This convenient behavior rating scale measures daily living skills—what people actually do, or can do, without the assistance of others. It is particularly useful in evaluating individuals with pervasive developmental disorders, mental retardation, neuropsychological problems, dementias, learning disabilities, biological risk factors, and sensory or physical impairments.

The ABAS-II is compatible with state and federal special education classification systems, it covers the 10 adaptive skills specified in the DSM-IV-TR, and it generates scores that are consistent with the AAIDD definition of intellectual disability. Multiple Raters, Different Perspectives. The ABAS-II includes five rating forms, each for a specific age range and respondent:

Parent/Primary Caregiver Form (Ages 0 - 5)

Parent Form (Ages 5 - 21)

Teacher/Daycare Provider Form (Ages 2 - 5)

Teacher Form (Ages 5 - 21)

Adult Form (Ages 16 - 89)

These forms can be completed by parents, family members, teachers, daycare staff, supervisors, counselors, or others who are familiar with the daily activities of the individual being evaluated. In addition, the Adult Form can function as a self-rating. (If raters have poor reading skills, you may read the items to them.)

Administration: Behavior rating scale typically completed by parent, caregiver, and/or teacher; self-rating option for adults.

## Infant-Toddler Developmental Assessment–Second Edition (IDA-2) Complete Kit with Manipulatives and Carrying Case

**Sally Provence \* Joanna Erikson \* Susan Vater \* Saro Palmeri \* Kyle Pruett \* Jennifer Rosinia**

The Infant-Toddler Developmental Assessment–Second Edition (IDA-2) is a comprehensive, multidisciplinary, family-centered six-phase process designed to identify children birth to 3 years of age who are developmentally at risk. The IDA-2 includes the Provence Birth-to-Three Developmental Profile, a criterion-referenced measure of development in eight areas:

- (1) gross motor, (2) fine motor, (3) relationship to inanimate objects,
- (4) language/communication, (5) self-help, (6) relationship to persons, (7) emotions and feeling states, and (8) coping behavior.

## Monteiro Interview Guidelines for Diagnosing the Autism Spectrum, Second Edition (MIGDAS-2)

**Marilyn J. Monteiro**

The Monteiro Interview Guidelines for Diagnosing the Autism Spectrum, Second Edition is a sensory-based process for gathering and organizing the qualitative information needed to diagnose autism in children, adolescents, and adults. The process includes guidelines for gathering information from parents/caregivers and teachers, and for conducting a sensory-based interview with the individual being evaluated. The end result is a comprehensive behavioral profile that describes the individual's distinct way of relating to the world, supplementing assessment scores and informing diagnosis and treatment planning. The MIGDAS-2 process is designed to facilitate writing a narrative evaluation report and providing diagnostic feedback using language that is easily understood by parents and others involved in the individual's care.

## The Scenotest (Paediatric Recognition) (SCENO)

**G. Von Staabs**

The Scenotest has been widely used test to assess emotional problems in children. It is a projective instrument employed for diagnostic and therapeutic purposes to gain insight into matters that the patient may consciously be withholding, or may not be able to express, due to emotional or physical abuse, or for other complex reasons. The standardized material of this test procedure is composed of flexible human figures, bendable in all joints, and a carefully chosen set of accessories: animals, trees, symbolic figures and items from everyday life. The Scenotest arouses the natural desire to play, reveals unconscious thoughts in a nonstressful way, and the many figures offer patients the opportunity to relive their own experiences.

## Autism Diagnostic Interview - Revised (ADI-R)

**Michael Rutter, Ann LeCouteur and Catherine Lord**

Used in research for decades, this comprehensive interview provides a thorough assessment of individuals suspected of having autism or other autism spectrum disorders. The ADI-R has proven highly useful for formal diagnosis as well as treatment and educational planning. To administer the ADI-R, an experienced clinical interviewer questions a parent or caretaker who is familiar with the developmental history and current behavior of the individual being evaluated. It evaluates 3 functional domains and is composed of 93 items, the ADI-R focuses on three functional domains Language/Communication, Reciprocal Social Interactions and Restricted, Repetitive, and Stereotyped Behaviors and Interests.

## Social Responsiveness Scale, 2nd Ed. (SRS-2)

John N. Constantino

The second edition of this highly regarded autism assessment offers the convenience of a screener and the power of a diagnostic tool. Completed in just 15 to 20 minutes, the SRS-2 identifies social impairment associated with autism spectrum disorders (ASDs) and quantifies its severity. It's sensitive enough to detect even subtle symptoms, yet specific enough to differentiate clinical groups, both within the autism spectrum and between ASD and other disorders. And, with an expanded age range, the SRS-2 can be used to monitor symptoms throughout the lifespan.

## Emotional Literacy: Assessment and Intervention

Southampton Psychology Service. Editor Adrian Faupel

Emotional Literacy: Assessment and Intervention identifies the status of pupils' emotional literacy and provides follow-up activities for intervention where necessary. The assessment covers elements of emotional literacy including self-awareness, emotional resilience, motivation and handling of emotions and relationships. Now accompanied by an interactive CD-ROM with full audio support and switch accessibility. This means that the Checklists can now be accessed by all those who may find paper-based assessments problematic, as well as supporting those with additional educational needs. The production of simple, clear printable score profiles will prove invaluable for the busy teacher.

## Receptive One-Word Picture Vocabulary Test- 4 (ROWPVT- 4)

Nancy A. Martin and Rick Brownell

The ROWPVT-4 is an individually administered, norm-referenced assessment of how well individuals can match a word that is heard (in English) to objects, actions, or concepts presented in full-color pictures (in a multiple-choice format). The ROWPVT-4 features additional items for younger children as well as for older adults, and it now features norms for elderly adults (80+ years). The ROWPVT-4 has been co-normed with the EOWPVT-4 to provide a comprehensive assessment of expressive and receptive vocabulary. Scoring is easy and straightforward, generally taking less than 5 minutes. Raw scores are reported as standard scores, percentile ranks, and, if necessary, age equivalents.

## Student Behavior Survey (SBS)

David Lachar, Sabine A. Wingenfeld, Rex B. Kline and Christian P. Gruber

Teachers offer a unique perspective on children. While clinicians and parents can provide useful insights, teachers are in the best position to evaluate children's functioning in relation to peers and within the school environment. And this perspective is essential in diagnosing disruptive behavior syndromes, student adjustment, and academic achievement. The Student Behavior Survey (SBS), from the author of the Personality Inventory for Children, Second Edition (PIC-2) and the Personality Inventory for Youth (PIY), joins these other highly regarded instruments to give you a comprehensive evaluation of student adjustment from the teacher's point of view.

## Sensory Processing Measure, Second Edition (SPM-2)

Infant/Toddler Print Kit

L. Diane Parham and Cheryl Ecker

The SPM-2 is an upgrade and expansion of the Sensory Processing Measure family of products, widely acclaimed as the best of its kind. A behavior rating scale, the SPM-2 offers new forms – including driving forms – and a broadened age range, so no one gets left behind. The new SPM-2 is firmly grounded in Ayres Sensory Integration® theory. T-scores provide norm-referenced indexes of the integrative functions of praxis and social participation, as well as the following sensory systems: Visual, Auditory, Tactile, Olfactory, and Gustatory (new). Proprioceptive, Vestibular. The SPM-2 items provide descriptive clinical information on processing vulnerabilities within each sensory system, including under- and over-reactivity, sensory-seeking behavior, and difficulties with perception. The forms at each age level are designed for maximum flexibility in choosing and comparing among environments and raters, such as multiple caregivers.

## Symbolic Play Test

Marianne Lowe and Anthony J. Costello

This popular standardised assessment enables professionals to observe children as they play with miniature toys in a variety of situations. This observation provides an objective indication of a child's early concept formation and symbolisation - abilities that precede and develop alongside receptive and expressive language. The test also makes use of attractive materials, which are presented to children in a set order, enabling the user to observe if the child relates them appropriately. An engaging and appropriate assessment for young children. Assessment style utilises the natural practice of play.

## Ages & Stages Questionnaires®: Social-Emotional, Second Edition (ASQ:SE-2™)

Jane Squires Ph.D., Diane Bricker Ph.D.,

With the typical ups and downs of young children's emotions and behavior, delays or problems can be easily missed. And today, as more children are increasingly exposed to risk factors such as poverty or toxic stress, the likelihood of depression, anxiety, and anti-social behavior increases. There is tremendous opportunity during the first few years of a child's life to identify and address potential social-emotional concerns. This is at the heart of ASQ:SE-2. It is modeled after the acclaimed ASQ-3™ and is tailored to identify and exclusively screen social and emotional behaviors. ASQ:SE-2 is an easy-to-use tool with all the advantages of ASQ-3—it's cost-effective, parent-completed, photocopiable, and culturally sensitive. With questionnaire results, professionals can quickly recognize young children at risk for social or emotional difficulties, identify behaviors of concern to caregivers, and identify any need for further assessment.

## Illinois Test of Psycholinguistic Abilities- 3rd Ed. (ITPA-3)

Donald D. Hammill, Nancy Mather and Rhia Roberts

The ITPA-3 is an effective measure of children's spoken and written language. All of the subtests measure some aspect of language, including oral language, writing, reading, and spelling. The content in this edition is consistent with Charles Osgood's original communication model and also with the adaptations of that model made by Samuel Kirk, James McCarthy, and Winifred Kirk. Chief among the assumptions underlying this model are: Language is an important part of a child's development, the essential components of language are measurable, these language components can be improved through instruction, and instruction in language is relevant to success in basic school subjects, particularly reading and writing.

## Temperament and Atypical Behavior Scale (TABS) Complete Set

Stephen J. Bagnato Ed.D., NCSP, John T. Neisworth,  
John Salvia D.Ed., Frances M. Hunt

Temperament and Atypical Behavior Scale (TABS) is a screening and assessment tool that aids professionals in detecting critical temperament and self-regulation issues that can indicate a child's risk for future behavioral challenges or developmental delay.

It examine Atypical self-regulatory behavior in areas such as

- temperament
- attention
- attachment
- social behavior
- play
- vocal and oral behavior
- senses and movement
- self-stimulation and self-injury
- neurobehavioral state

## School Motivation and Learning Strategies Inventory (SMALSI) : Comprehensive Kit

Kathy Chatham Stroud and Cecil R. Reynolds

With School Motivation and Learning Strategies Inventory (SMALSI), the skills related to academic success early in a student's school career can be measured. This allows you to address any weaknesses proactively rather than waiting for repeated academic failures to determine that a student needs help.

Designed for both special and general education students, this self-report inventory assesses 10 primary constructs associated with academic motivation, learning strategies, and study habits 7 focusing on student strengths and 3 focusing on student liabilities: Study Strategies, Note-Taking/Listening Skills, Reading/Comprehension Strategies, Writing/Research Skills, Test-Taking Strategies, Organizational Techniques, Time Management, Liabilities, Low Academic Motivation, Test Anxiety, Concentration/Attention Difficulties. Scores from these scales provide enough information to identify problems that interfere with academic development.

An Inconsistent Responding index is also included as a validity measure. The SMALSI is available in two forms the Child Form (147 items) and the Teen Form (170 items). Both forms are written at a third-grade reading level. Both use a 4-point response scale, ranging from "Never" to "Almost Always." Scored by hand, Mail-In Answer Sheet, or computer, the SMALSI provides multiple scores, rather than one overall score. The unlimited-use scoring CD (W-398U-3) offers you an efficient and cost-effective way to screen large school populations. The SMALSI audio CD allows poor readers, who are often at risk for academic failure, to complete the SMALSI by listening to test items and then responding.

## Comprehensive Test of Phonological Processing 2nd Ed. (CTOPP-2)

Richard Wagner, Joseph Torgesen and Carol Rashotte

The Comprehensive Test of Phonological Processing (CTOPP) assesses phonological awareness, phonological memory and rapid naming. Persons with deficits in one or more of these kinds of phonological processing abilities may have more difficulty learning to read than those who do not. The CTOPP was developed to aid in the identification of individuals from kindergarten through college who may profit from instructional activities to enhance their phonological skills. Because the test battery spans such a wide range of ages, and the abilities it taps are so varied across the ages, it was necessary to develop two versions of the test. The first version, developed for individuals ages 5 and 6, contains seven core sub-tests and one supplemental test. The second version, for individuals ages 7 through 24, contains six core subtests and eight supplemental tests.

## Middle Infant Screening Test (MIST)

Cliona Kelly

MIST extremely useful to identify children who are finding the basic literacy concepts challenging at the mid way point of the senior infants year... Forward Together provides us with a very useful tool to work with parents to help their children improve their literacy skills.

The Middle Infant Screening Test (MIST) and Forward Together Programme focus on reading, writing and listening skills and together provide a comprehensive screening, diagnostic and recovery package for younger children.

MIST identifies early literacy difficulties and the Forward Together Programme provides a recovery programme for those children identified as likely to benefit. Lasting from eight to 12 weeks, the programme can bring pupils' skill levels in reading and writing up to that of their classmates, raising confidence and self-esteem. Each pupil works through the Forward Together Activity Sheets either at home with the help of a parent, or in school with Learning Support staff.

## Gray Silent Reading Tests (GSRT)

J. Lee Wiederholt and Ginger Blalock

The Gray Silent Reading Tests (GSRT) will help you quickly and efficiently measure an individual's silent reading comprehension ability. The GSRT is a new, exciting addition to the Gray reading test battery. This test consists of two parallel forms each containing 13 developmentally sequenced reading passages with five multiple-choice questions. It can be given individually or to groups. Each form, of the test yields raw scores, grade equivalents, age equivalents, percentiles, and a Silent Reading Quotient. The GSRT was normed on 1,400 individuals in 31 states. Characteristics of the normative sample have been stratified and approximate those provided in the 1997 Statistical Abstract of the United States with regard to gender, geographic region, ethnicity, race, urban/rural residence, and disability.

## Revised Children's Manifest Anxiety Scale- 2nd Ed. (RCMAS-2)

Cecil R. Reynolds and Bert O. Richmond

One child in nine experiences an anxiety disorder. But because anxious children tend to be quiet, compliant, and eager to please, their problems sometimes go unnoticed. The new RCMAS-2 quickly brings into focus the often invisible worry, stress, and fear that can lead to academic difficulties, social withdrawal, substance abuse, and other problems. An Updated Second Edition widely used by school psychologists, clinicians, and researchers, the Revised Children's Manifest Anxiety Scale is now available in an updated Second Edition. The new RCMAS-2 retains all the features that made previous versions of the test so popular--brevity, a simple yes/no response format, an elementary reading level, and content-based item clusters that help pinpoint children's problems and focus intervention. At the same time, it adds a convenient Short Form, updated and ethnically diverse norms, and new items that reflect changes in the way children now experience anxiety.

**GORT-5: Gray Oral Reading Tests- 5th Ed: Complete Kit****J. Lee Wiederholt and Brian R. Bryant**

The Gray Oral Reading Tests, now in its fifth edition, is one of the most widely used measures of oral reading fluency and comprehension in the United States. The GORT-5 has two equivalent forms, Form A and Form B. Each form contains 16 developmentally sequenced reading passages with five comprehension questions each. An optional miscue analysis system allows reading specialists to analyze reading errors and tailor interventions to specific students' needs. The GORT-5 may be used for: Identifying students with reading difficulties, Diagnosing reading disabilities, Determining strengths and weaknesses, Evaluating students' progress in reading and Conducting research.

**Detroit Tests of Learning Abilities- Fifth Edition (DTLA-5)****Donald D. Hammill**

The Detroit Tests of Learning Abilities—Fifth Edition (DTLA-5) is the oldest and most venerable of the tests of specific cognitive abilities. The figure below illustrates the DTLA-5 test structure. The test includes 12 subtests: Humanities/Social Studies, Science/Mathematics, Word Opposites, Word Associations, Geometric Matrices, Geometric Sequences, Sentence Imitation, Word Span, Design Reproduction, Reversed Letters, Trail Making, and Rapid Naming. The results of the subtests can be combined to form 9 composites. Six of these composites represent different cognitive subdomains (Acquired Knowledge, Verbal Comprehension, Nonverbal Problem Solving, Verbal Memory, Nonverbal Memory, and Processing Speed); two of these composites represent larger, important cognitive domains (Reasoning Ability and Processing Ability). One global composite is formed by combining the results of all 12 of the DTLA-5 subtests and represents general cognitive ability. Examiners can administer the subtests from one or both of the DTLA-5 domains, depending on the purpose of the evaluation.

**Dyscalculia Guidance Book****Brian Butterworth and Dorian Yeo & Cecil R. Reynolds and Ronald B. Livingston**

Dyscalculia Screener is a unique, computer-based assessment that indicates dyscalculic tendencies by measuring pupils' response times as well as the accuracy of their answers.

Dyscalculia Screener:

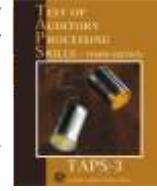

- Provides automatic standardised scores
- Gives instant feedback in an individual pupil profile
- Is motivating and accessible for pupils
- Designed by the UK's leading authority on dyscalculia - Professor Brian Butterworth

## Test of Auditory Processing Skills- 3rd Ed. (TAPS-4)

Nancy A. Martin and Rick Brownell

This useful battery can help you diagnose auditory processing difficulties, imperceptions of auditory modality, language problems, and/or learning disabilities in both children and teens. Used by psychologists, speech pathologists, language specialists, learning specialists, diagnosticians, and other testing professionals, it measures what children and teens do with what they hear. The TAPS-3 includes the following subtests: Word Discrimination, Phonological Segmentation, Phonological Blending, Numbers Forward, Numbers Reversed, Word Memory, Sentence Memory, Auditory Comprehension, Auditory Reasoning.

## Lindamood Auditory Conceptualization Test- 3rd Ed. (LAC-3)

Patricia C. Lindamood and Phyllis Lindamood

The LAC-3 is an individually administered, norm-referenced assessment that measures an individual's ability to perceive and conceptualize speech sounds using a visual medium. Because of the importance of these auditory skills to reading, the results are helpful for speech-language pathologists, special educators, and reading specialists. The LAC-3 also measures the cognitive ability to distinguish and manipulate sounds, which success in reading and spelling requires. This third edition of the LAC has been improved considerably. Three new categories of items that relate to multisyllabic processing have been added. The availability of standard scores for the LAC-3 total score is a desirable new feature.

## Sensory Integration and Praxis Test (SIPT)

A. Jean Ayres

The Sensory Integration and Praxis Tests (SIPT) measure the sensory integration processes that underlie learning and behavior. By showing you how children organize and respond to sensory input, SIPT helps pinpoint specific organic problems associated with learning disabilities, emotional disorders, and minimal brain dysfunction. The SIPT measures visual, tactile, and kinesthetic perception as well as motor performance. It is composed of the following 17 brief tests: Space Visualization, Figure-Ground Perception, Standing/Walking Balance, Design Copying, Postural Praxis, Bilateral Motor Coordination, Praxis on Verbal Command, Constructional Praxis, Postrotary Nystagmus, Motor Accuracy, Sequencing Praxis, Oral Praxis, Manual Form Perception, Kinesthesia, Finger Identification, Graphesthesia, Localization of Tactile Stimuli. The entire battery can be given in 2 hours.

## Symbol Imagery (SI) Test Kit

Nanci Bell

The new Symbol Imagery (SI) Test is a standardized, norm-referenced test designed to measure a student's symbol imagery for sounds and letters within words.

Symbol imagery is the ability to create mental imagery for the sounds and letters within words. It develops both phonological and orthographic processing, and it is essential to the development of word attack, word recognition, spelling and accurate, fluent contextual reading. It is ideal for progress monitoring.

The SI Test results show large to very large correlations with measures of:

Phonemic awareness	Word attack	Word recognition
Spelling	Paragraph-reading fluency & comprehension

## British Picture Vocabulary Scale- 3rd Ed.

Lloyd M Dunn, Douglas M Dunn, Ben Styles and Julie Sewell

BPVS3 assesses students' receptive (hearing) vocabulary: for each question the teacher says a word and the student responds by selecting the picture (from four options) that best illustrates the word's meaning. The questions broadly sample words that represent a range of content areas such as actions, animals, toys and emotions and parts of speech such as nouns, verbs or attributes, across all levels of difficulty. Benefits: Full colour illustrations, Enlarged format that makes illustrations stand out, Vivid colours and black outlines make illustrations suitable for students who may be colour blind, Test format helps to reduce tension during the test session – teacher can observe as well as assess, Ideal for practitioners in mainstream and special education settings, Screens for verbal development, Helps in the detection of language impairment.

## Fluharty Preschool Speech and Language Screening Test- 2nd Ed. (FLUHARTY-2)

Nancy Buono Fluharty

The Fluharty Preschool Speech and Language Screening Test-Second Edition (Fluharty-2) contains five subtests: Articulation, Repeating Sentences, Responding to Directives and Answering Questions, and Describing Actions and Sequencing Events. Scores reflect performance in articulation, receptive language, expressive language, and composite language. The Fluharty-2 provides rapid identification of those Preschool children for whom a complete Speech and language evaluation is recommended. The Fluharty-2 is a complete revision, normed on 705 children in 21 states. Sample populations represent the geographical distribution of the United States in 1998 and projected figures for 2000.

## Comprehensive Assessment of Spoken Language - 2nd Ed (CASL - 2)

Elizabeth Carrow-Woolfolk

The Comprehensive Assessment of Spoken Language, Second Edition is the most up-to-date measure of oral language skills available. It offers the flexibility of 14 stand-alone tests in one comprehensive yet specific battery. Preserving the strengths of the original and highly regarded test, the second edition introduces new and enhanced features to increase validity, functionality, and ease of use.

## Kaufman Speech Praxis Treatment Kit – Basic Level (KSPTK)

**Nancy Kaufman**

A proven method for teaching young children how to produce and combine the oral motor movements necessary to speak functionally, and intelligibly. The KSPTK are a systematic Treatment program that trains children to simplify word pronunciation patterns, making it easier for them to communicate. Utilization of these Kits also allow the clinician to introduce more complex phoneme patterns as the child's ability improves, thus maintaining the child's ability to speak at his maximum Level. The KSPTK can be used with anyone who is having difficulty with articulatory skills in general, with the exception of children with oral-motor weakness or dysarthria. Both Kits explain in a systematic way how to simplify verbal expression making it easier for children to communicate. Utilization of these Kits also allows the clinician to introduce more complex phoneme patterns as the child's ability improves, thus keeping the child's ability to speak at his or her maximum Level.

## Kaufman Speech Praxis Test for Children (KSPT)

**Nancy Kaufman**

The kspt identifies the level of breakdown in a child's ability to speak so that treatment can be established and improvement tracked. Easy to administer and score, the test helps you measure a child's imitative responses to the clinician, locates where the child's speech system is breaking down, and points to a systematic course of treatment. Results of the kspt are useful beyond establishing an initial diagnosis. Gains in motor-speech proficiency can be measured and quantified in several ways. Individual sections of the test can be used to establish treatment goals and measure progress. kspt results also can be used to generate Individualized Education Programs (IEPs).

## Assessment of Language-Related Functional Activities (ALFA)

**Kathleen A. Baines, Ann W. Martin and Heidi McMartin Heeringa**

Use this test to assess Language-Related Functional Activities. The ALFA consists of 10 subtests, each of which assess a different Functional activity: Telling Time, Counting Money, Addressing an Envelope, Solving Daily Math Problems, Writing a Check/Balancing a Checkbook, Understanding Medicine Labels, Using a Calendar, Reading Instructions, Using the Telephone, and Writing a Phone Message. The patient actually performs each Functional activity, and you record an objective, quantitative score. The ALFA helps you meet the daily, front-line need to quickly and conveniently assess patients' Functional Language-Related Activities. The ALFA's subtests require use of all language modalities: auditory comprehension, verbal expression, reading and writing, as well as cognitive and motor skills.

## KLST-3: Kindergarten Language Screening Test, 3rd Ed.

**Sharon Gauthier and Charles Madison**

The Kindergarten Language Screening Test-Third Edition (KLST-3) is a 47-item, standardized, norm-referenced screening test that measures the spoken language ability of children. The screener format allows users to quickly identify children who need further evaluation and instruction and to reliably measure their progress during the year.

#### New Features of the KLST-3

New items were added to better assess language skills (e.g., semantics, syntax, and morphology).

The spontaneous speech item was replaced with morphological completion items to measure children's understanding of pronouns, plurals, subject-verb agreement, and past tense verbs. Criteria for correct and incorrect responses were clarified to improve the test's ability to identify children who need a more in-depth language assessment.

All users now have access to the all-new KLST-3 Online Scoring and Report System. This system includes access to an electronic version of the Examiner Record Form and provides a quick, efficient tool for (a) entering test session data; (b) converting total raw scores into index scores; (c) generating age equivalents, percentile ranks, and upper and lower confidence intervals; and (d) obtaining a score summary report. Inclusion of the software eliminates the need to include normative tables in the Examiner's Manual and ensures accurate calculation of scores.

## Language Activity Resource Kit- 2nd Ed. (LARK-2)

Richard A. Dressler

The second edition of the Language Activity Resource Kit includes an updated collection of objects, photographs, illustrations, and print material for use in Language therapy with adults who have moderate to severe Language disorders. The materials are useful in therapy addressing right hemisphere dysfunction and in speech production tasks aimed at improving intelligibility. The LARK objects are associated with specific actions, making them helpful in treating patients with aphasia and other Language deficiencies resulting from brain trauma or neurological disorders.

## Oral and Written Language Scales, 2nd Ed. (OWLS-II)

Elizabeth Carrow-Woolfolk

The OWLS-II adds a Reading Comprehension scale, updated norms, new items, a parallel form, improved scoring guidelines, and full-color stimulus materials. Moreover, a helpful new handbook, Foundations of Language Assessment, explains the theory on which the OWLS-II is based, making it easier to understand the test and interpret results. The OWLS-II evaluates four language processes on four separate scales: Listening Comprehension, Oral Expression, Reading Comprehension, and Written Expression. Each scale assesses four linguistic structures: lexical/semantics, syntax, pragmatics, and supralinguistics. Because it assesses the same linguistic structures across four distinct language processes, the OWLS-II provides a detailed, coherent, and integrated assessment. Although the four scales can be used separately, using them together produces a comprehensive score profile that pinpoints language delays, identifies strengths and weaknesses in all areas, and guides intervention.

## Preschool Language Assessment Instrument- 2nd Ed. (PLAI-2)

Marion Blank, Susan A. Rose and Laura J. Berlin

The Preschool Language Assessment Instrument-Second Edition (PLAI-2) is a revision of a classic test, which assesses children's abilities to meet the demand of classroom discourse. Normed on a sample of 463 children residing in 16 states, PLAI-2 tells you how effectively a child integrates cognitive, linguistic and pragmatic components to deal with the full range of adult-child exchange. Teachers, speech-Language clinicians, and those in special education will appreciate the ease-of-use and multi-faceted information this test provides.

## TACL-4: Test for Auditory Comprehension of Language–Fourth Edition

Elizabeth Carrow-Woolfolk

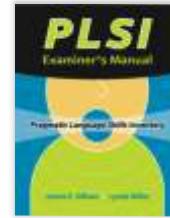

The Test for Auditory Comprehension of Language–Fourth Edition (TACL-4) is the latest revision of this popular, individually administered test. It is a reliable and valid measure of a child's receptive spoken vocabulary, grammar, and syntax. The test measures children's ability to understand three language forms: Vocabulary, Grammatical Morphemes & Elaborated Phrases and Sentences.

## Pragmatic Language Skills Inventory (PLSI)

James E. Gilliam and Lynda Miller

The Pragmatic Language Skills Inventory (PLSI) is an easy-to-use, norm-referenced rating scale designed to assess children's Pragmatic Language abilities. Cut-off scores are provided for determining whether the student exhibits characteristics of a Pragmatic Language disorder and should be referred for a more comprehensive Language assessment. Guidelines are provided to assist the examiner in interpreting the results. Reliability and validity ratings are exceptionally strong and support the use of the PLSI as a diagnostic instrument. Teachers, early interventionists, and other professionals will find this test useful and thorough. Identify students who have a disorder, document progress in ability, collect data for research, and target Pragmatic Language goals all with this succinct test, user-friendly test.

## Receptive-Expressive Emergent Language Test – Third Edition (REEL-4)

Kenneth R. Bzoch

The Receptive-Expressive Emergent Language Test – Third Edition (REEL-3) is designed to help you identify infants and toddlers who have language impairments or who have other disabilities that affect language development. It is especially useful as an assessment and planning instrument in Early Childhood Intervention programs mandated under P.L. 99-457. The REEL-3 has two core subtests, Receptive Language and Expressive Language, and a supplementary subtest, Inventory of Vocabulary Words. Results are obtained from a care-giver interview.

The REEL-3 is based on a contemporary linguistic model. It includes current studies relating to normative base, reliability, and validity. The normative sample includes 1,112 infants and toddlers from around the nation. The demographic characteristics of the sample were matched to those of the United States according to the 2000 census. The normative sample was stratified on the basis of age, gender, race, ethnic group membership, and geographic location. Standard scores, percentile ranks, and age equivalents are provided.

## TECEL: Test of Early Communication and Emerging Language (TECEL)

Mary Blake Huer and Lynda Miller

The Test of Early Communication and Emerging Language (TECEL) assesses the earliest communication behaviors and emerging language abilities. It is well-constructed, reliable, practical, research-based, and theoretically sound. The TECEL is a revision and standardization of Mary Blake Huer's Nonspeech Test, a well-regarded assessment used with both typically developing young children and with older individuals with moderate-to-severe language delays. The TECEL can be used by: Speech Language Pathologists, Early Intervention and Early Childhood Professionals, Special Educators, Psychologists, Diagnosticians, Assistive Technology and AAC Specialists, and related professionals.

## Test of Childhood Stuttering (TOCS)

Ronald B. Gillam • Kenneth J. Logan • Nils A. Pearson

The Test of Childhood Stuttering (TOCS) provides clinicians and researchers with a sound method for assessing speech fluency skills and stuttering-related behaviors in children 4 through 12 years of age. Its main purposes are to (1) identify children who stutter, (2) determine the severity of a child's stuttering, and (3) document changes in a child's fluency functioning over time. It can also be used as a tool in research on childhood stuttering.

## Test of Pragmatic Language–Second Edition (TOPL-2)

Diana Phelps-Terasaki and Trisha Phelps-Gunn

This new edition of the popular Test of Pragmatic Language (TOPL) addresses issues including social skills and conflict resolution, providing essential information for school psychologists, counselors, clinical psychologists and special education specialists. These team members can now use the TOPL-2 as part of the evaluation and program planning. The TOPL-2 identifies individuals with pragmatic language deficits, determines individual strengths and weaknesses, and documents progress over time. It focuses on a student's ability to monitor and appraise the effectiveness of the response, to resolve the social problem situation.

## PRODUCT OVERVIEW

## The New Reynell Developmental Language Scales (NRDLS)

Susan Edwards, Carolyn Letts and Indra Sinka

Reynell Developmental Language Scales III (RDLSIII) reflects current views on language development and is a norm-based practical tool for everyday clinical use. It includes two scales - the Comprehension and the Expressive Scales. The scales contain 62 items and focus on the structural aspect of language and how they contribute to its acquisition and use, and examine disorders that can occur in either area. The Comprehension Scale is organised into 10 sections :Single Words, Relating Two Named Objects, Agents and Actions, Casual Constituents, Attributes, Non Phrases, Locomotive Relations, Verbs and Thematic Role Assignment, Vocabulary and Complex Grammar, Inferencing.

## PRODUCT OVERVIEW

## TOLD-I:5: Test of Language Development–Intermediate: Fifth Edition, Complete Kit

Donald D. Hammill+Phyllis L. Newcomer

The TOLD-I:5 assesses spoken language in intermediate-age students. It is well constructed, reliable, practical, research based, and theoretically sound. Professionals can use the TOLD-I:5 to (a) identify students who are significantly below their peers in oral language proficiency, (b) determine their specific strengths and weaknesses in oral language skills, (c) document their progress in remedial programs, and (d) measure oral language in research studies.

## PRODUCT OVERVIEW

Product Code: 22-3083-KT

₹: 1,54,675.00

Age Range: 2 to 90 years

Time Taken: 5 to 10 minutes

Administration: Individual

Language: English

## Woodcock-Johnson IV Oral Language Kit

Richard Woodcock, Nancy Mather and Frederick A. Schrank

The WJ IV Tests of Oral Language can be used to determine and describe an individual's strengths and weaknesses with regard to expressive language, and provides language-related insight into observed learning problems. The 12-test battery includes nine English tests and three Spanish tests, all of which are included in a single test easel. The WJ IV is intended for use with examinees ages 2 through 90. Most examiners will need 5 to 10 minutes per test administered within a battery.

## PRODUCT OVERVIEW

Product Code: 17-5064-KT

₹: 18,370.00

Age Range: 2 - 10 years

Time Taken: 15 - 20 minutes

Administration: Individual

## Stuttering Severity Instrument – Fourth Edition

Glyndon D. Riley

Stuttering Severity Instrument–Fourth Edition (SSI-4) is a reliable and valid norm-referenced stuttering assessment that can be used for both clinical and research purposes. It measures stuttering severity in both children and adults in the four areas of speech behavior: frequency duration physical concomitants naturalness of the individual's speech.

Frequency is expressed in percent syllables stuttered and converted to scale scores of 2-18. Duration is timed to the nearest one tenth of a second and converted to scale scores of 2-18. The four types of Physical Concomitants are and converted to scale scores of 0-20. The SSI-4 can also be used in conjunction with the Stuttering Prediction Instruments for Young Children (SPI).

## Test of Early Written Language- 3rd Ed. (TEWL-3)

Wayne P. Hresko, Shelley R. Herron, Pamela K. Peak and Deanna L. Hicks

The tewl-3 is a revision of the widely used Test of Early Written Language—Second Edition. It includes two forms, each with a Basic Writing and a Contextual Writing subtest. The tewl-3 provides standard score indexes ( $M = 100$ ,  $SD = 15$ ) for age and grade percentiles, and age and grade equivalents. The selection of items and the development of the subtests are grounded in the available research literature and other evidence of developing literacy ability, including curriculum guides and classroom activities. Item types were selected only if recognized experts in the field have related them to developing literacy abilities. The TEWL-3 Subtests are: Basic Writing, Contextual Writing and Overall Writing.

### PRODUCT OVERVIEW

Product Code: 17-2922-KT

₹: 37,730.00

Age Range: 4-0 through 11-11 years

Time Taken: 30 - 50 minutes

Administration: Individual

Language: English

## Test of Written Language- 4th Ed. (TOWL-4)

Donald D. Hammill and Stephen C. Larsen

The fourth Edition of Test of Written Language (TOWL-4) is a norm-referenced, comprehensive diagnostic Test of Written expression. It is used to (a) identify students who write poorly and, therefore, need special help, (b) determine students' particular strengths and weaknesses in various writing abilities, (c) document students' progress in special writing programs, and (d) measure writing in research. The Test was normed on 2,505 individuals from 18 states whose demographic characteristics approximate those of the U.S. population in 2005. The sample was stratified by age.

### PRODUCT OVERVIEW

Product Code: 17-1269-KT

## TEXL: Test of Expressive Language Complete Kit

Elizabeth Carrow-Woolfolk \* Elizabeth A. Allen

The new Test of Expressive Language (TEXL) is a highly reliable and valid measure of a child's expressive spoken language ability. The test measures a child's ability to produce the following categories of English language forms:

Vocabulary: Word classes such as nouns, verbs, adjectives, and adverbs, and of words that represent basic percepts and concepts.

Grammatical Morphemes: Function words (e.g., prepositions, pronouns, determiners) and inflections (e.g., bound morphemes such as noun number and case, verb number and tense, noun–verb agreement, and derivational suffixes).

Elaborated Phrases and Sentences: Syntactically based word relations and elaborated phrase and sentence constructions, including the modalities of single and combined constructions (interrogative sentences, negative sentences, active and passive voice, direct and indirect object), embedded sentences, and partially and completely conjoined sentences.

### PRODUCT OVERVIEW

Product Code: 17-0477-KT

₹: 47,960.00

Age Range: 3-0 through 12-11

Time Taken: 20 to 30 minutes

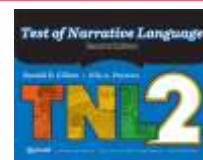

Administration: Individual

Language: English

## Test of Narrative Language - 2 Edition

Ronald B. Gillam • Nils A. Pearson

The Test of Narrative Language- Second Edition (TNL-2) is a norm-referenced test that measures children's narrative language abilities (i.e., children's ability to understand and tell stories). Narration is an important aspect of spoken language, not usually measured by oral-language tests, that provides a critical foundation for literacy.

The TNL-2 enables clinicians to assess important aspects of narrative language without having to transcribe children's stories. This saves hours of transcription time, and provides a valid and reliable metric of narrative language development. The TNL-2 is a natural complement to other standardized tests that use contrived formats to assess components of oral language, and it is especially useful for diagnosing language-based learning disabilities.

### PRODUCT OVERVIEW

## Test of Childhood Stuttering (TOCS)

Ronald B. Gillam • Kenneth J. Logan • Nils A. Pearson

The Test of Childhood Stuttering (TOCS) provides clinicians and researchers with a sound method for assessing speech fluency skills and stuttering-related behaviors in children 4 through 12 years of age. Its main purposes are to (1) identify children who stutter, (2) determine the severity of a child's stuttering, and (3) document changes in a child's fluency functioning over time. It can also be used as a tool in research on childhood stuttering.

# Computerized Neurocognitive Assessment

## CANTAB Connect Research

CANTAB Connect Research is the world's most validated, precise and reliable research software providing sensitive digital measures of cognitive function for all areas of brain research. Delivering leading neuroscience through our secure cloud platform, CANTAB Connect Research is an efficient and easy-to-use system providing insights into behaviours, underlying brain circuits and neurochemical systems and measurement of digital cognitive biomarkers.

### Benefits of Using CANTAB Connect Research

#### The original computerised cognitive assessments

CANTAB cognitive assessment technology has been designed for use on digital devices to focus task outcome measures on specific brain circuits and neurochemistry. The tests have been continually refined to increase specificity and sensitivity whilst maintaining scientific validity.

#### Fast, easy and efficient

With CANTAB, studies and assessments are quick and easy to set up, administer and report on - saving costs, reducing data errors and increasing the quality of study results. Automated computerised test delivery ensures every participant is assessed consistently, removing the possibility of any rater variance and allows non-specialist study staff to administer tests.

#### Highest quality data

Participants are guided through assessment with voiceover instructions, available in over 35 languages, making CANTAB simple to administer and complete. Study data is automatically quality checked at source and results are instantly calculated and scored, ensuring clean data and preventing human error.

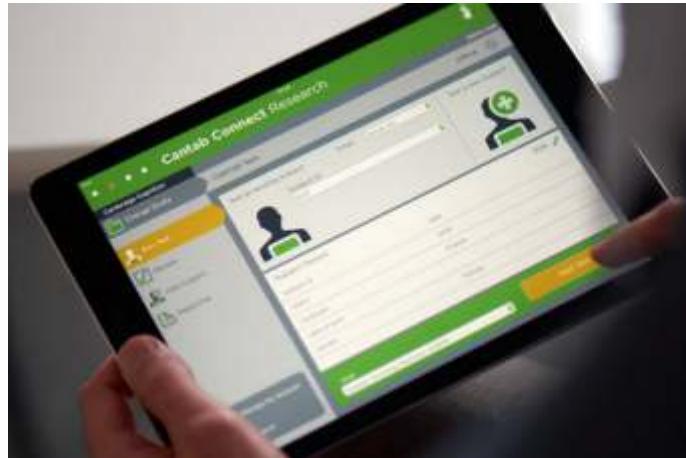

#### Translational neuroscience

CANTAB tests have translational utility meaning that data can be compared directly to preclinical findings and have been adapted and used in conjunction functional neuroimaging to identify brain circuitry and neurochemical systems

involved in task performance.

#### The world's most sensitive cognitive tests

CANTAB is sensitive to pharmacological and environmental effects in both healthy individuals and patient populations. The tests use non-verbal visual stimuli for use across all languages and adaptive modes allow investigators to change the difficulty of the tests dependent on user age and ability for use in healthy volunteers, impaired patients and children.

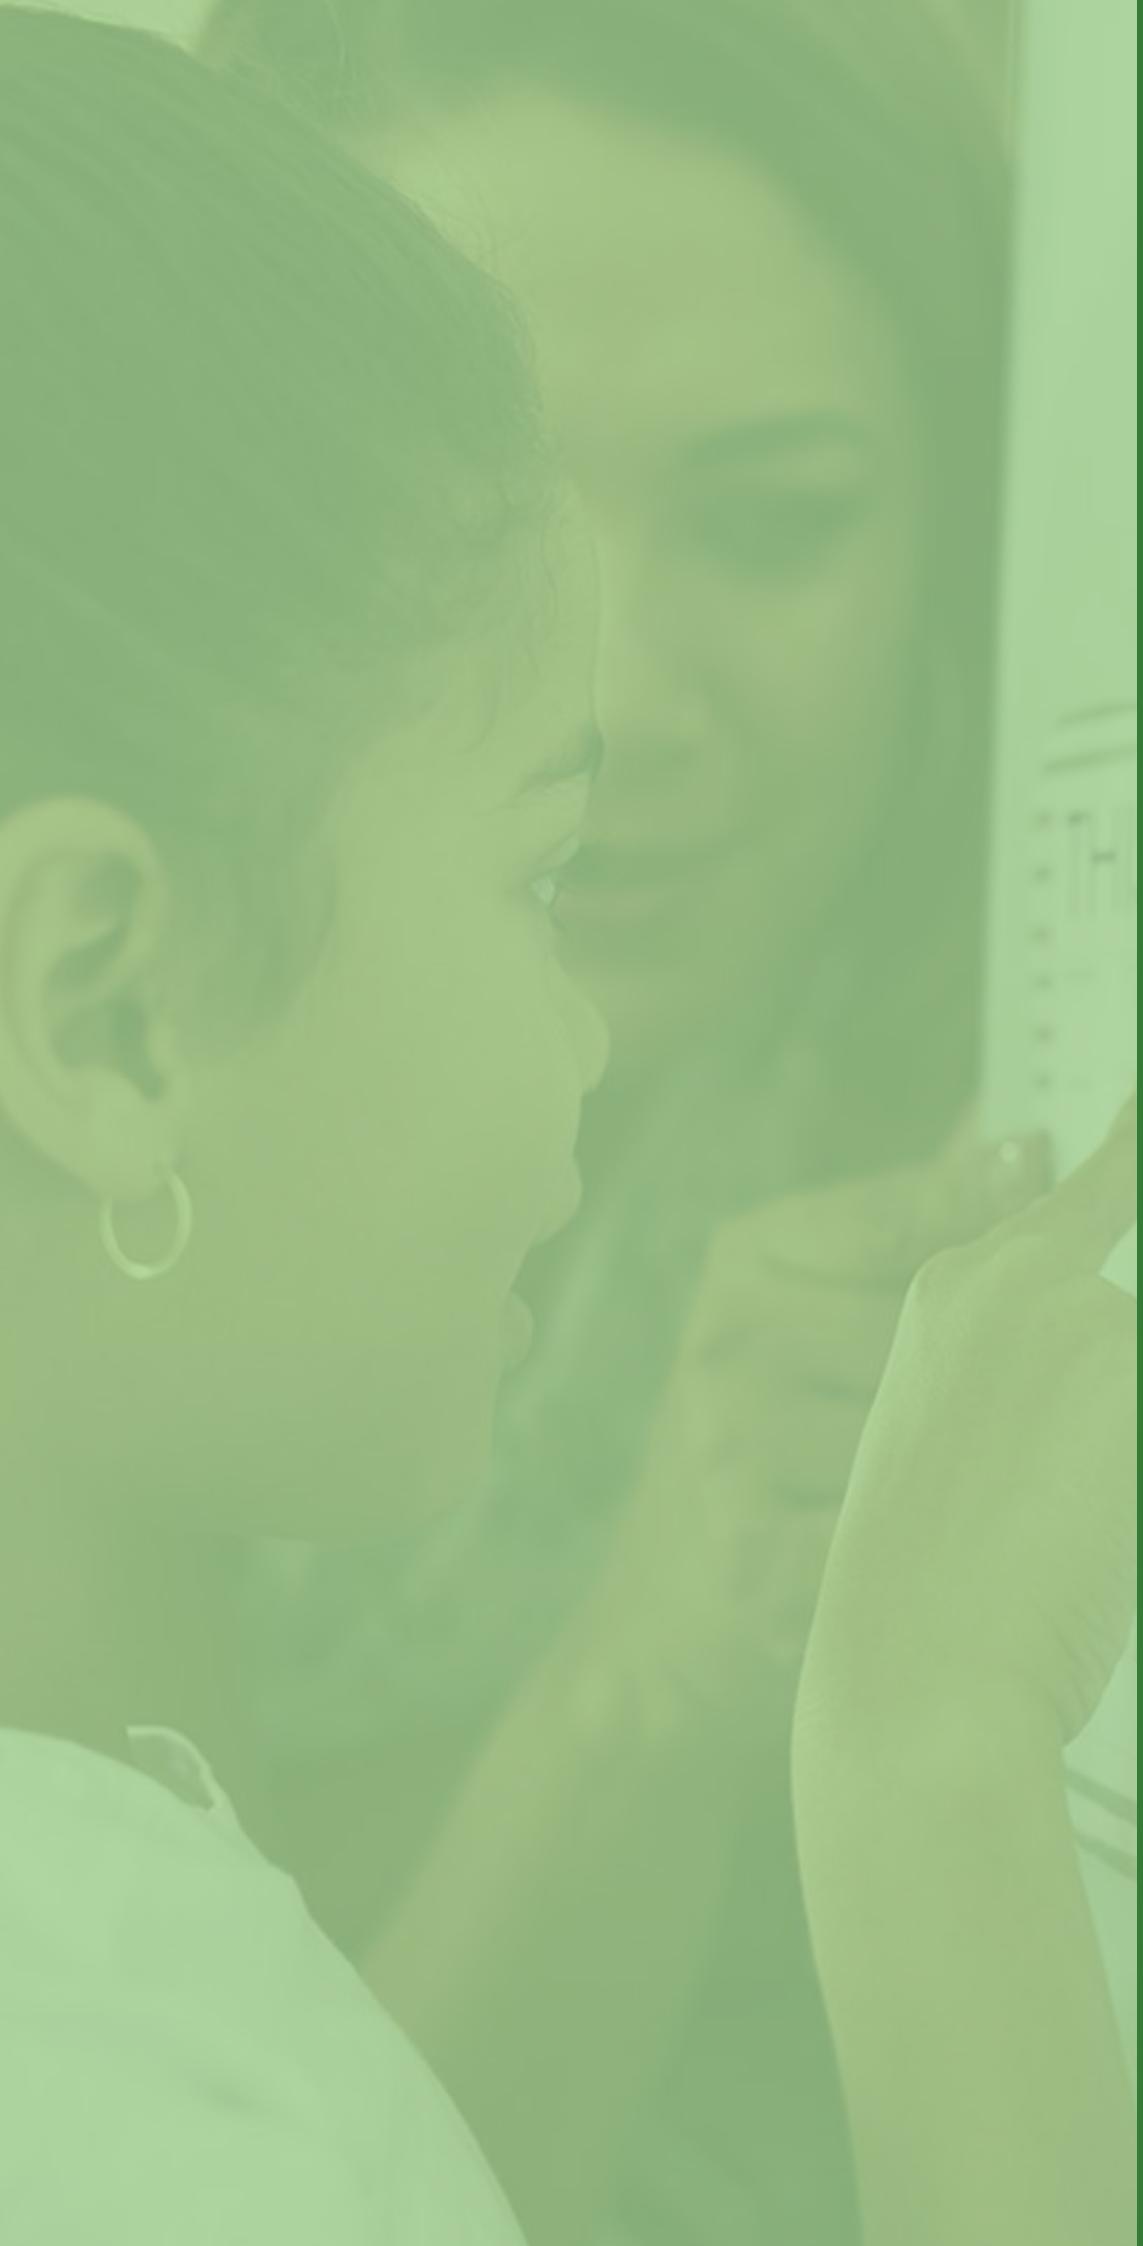

### Features of CANTAB Connect Research

- The world's most validated cognitive tests
- All cognitive domains digitally assessed
- Innovative cloud-based platform for connected research
- Secure data encryption and storage
- Automated test administration
- Real-time access to high-quality data
- Intuitive touchscreen interface
- Suitable for healthy and patient populations
- Over 30 languages supported
- Web-based testing available

### Key Domains Assessed:

- ✓ Attention
- ✓ Memory
- ✓ Executive Function
- ✓ Emotion & Social Cognition
- ✓ Psychomotor Speed

A close-up, slightly blurred photograph of a woman with dark, curly hair. She is looking down at a laptop screen, which is visible in the background. The lighting is soft, creating a professional yet intimate feel.

## ADHD School Observation Code (ADHD-SOC)

**Kenneth D. Gadow, Joyce Sprafkin and Edith E. Nolan**

ADHD School Observation Code (ADHD SOC) to assess the behavioral symptoms of AD/HD, oppositional defiant disorder, and conduct problems in structured (classroom), semi-structured (lunchroom), and unstructured (playground) settings. Research shows that direct observations of child behaviors are important when making differential diagnoses, planning special education services, formulating treatment plans, and monitoring response to intervention.

## ADHD Symptom Checklist-4 (ADHD-SC4)

**Kenneth D. Gadow and Joyce Sprafkin**

The ADHD Symptom Checklist-4 (ADHD-SC4) is a 50-item rating scale for evaluating response to treatment in children and adolescents with AD/HD (ages 3 to 18 years). The same version can be completed by parents and teachers. The ADHD-SC4 comprises four subscales: DSM-5 symptoms of AD/HD; DSM-5 symptoms of oppositional defiant disorder (ODD); the Peer Conflict Scale, which measures interpersonal peer aggression; and the Stimulant Side Effects Checklist (to monitor medication). The ADHD-SC4 can be scored to derive symptom count cutoff scores (diagnostic model) or symptom severity scores (T scores based on a dimensional model). Scoring is quick and easy with user-friendly score sheets.

## Child & Adolescent Symptom Inventory-5 (CASI-5)

**Kenneth D. Gadow and Joyce Sprafkin**

The Child & Adolescent Symptom Inventory-5 (CASI-5) is a behavior rating scale for evaluating the symptoms of DSM-5 emotional and behavioral disorders among children and adolescents between 5 and 18 years old who are attending elementary, middle, or secondary school. The CASI-5 is a combination of the Child Symptom Inventory (CSI) and the Adolescent Symptom Inventory (ASI) and was developed for clinicians and researchers who worked with both children and adolescents and who preferred one symptom inventory for the entire age range. There are both parent- and teacher-completed versions. The CASI-5: Parent Checklist contains 173 items for over two dozen emotional and behavioral disorders, and the CASI-5: Teacher Checklist contains 125 items. For each disorder there is an Impairment question (i.e., the degree to which symptoms interfere with the youth's social or academic functioning). The CASI-5 can be read to the parent by a qualified clinician thus serving as a structured clinical interview.

## Life Stressors and Social Resources Inventory (LISRES-Adult / Youth)

**Rudolf H. Moos**

The LISRES provides a unified framework to measure ongoing life stressors and social resources and their changes over time. This inventory identifies the level of current stressors and their sources as well as the available social resources. Two separate versions of the LISRES are available, the LISRES-A and the LISRES-Y. Each version has its own Manual, coauthored by Bernice S. Moos, that describes the development of the instrument and provides normative data, as well as complete instructions for administration, scoring, and interpretation. The Manuals also discuss validity and research applications. The LISRES-A may be used with healthy adults, psychiatric, substance abuse, or medical patients. It covers eight major areas of life experience: Physical Health, Spouse/Partner, Finances, Work, Home/Neighborhood, Children, Friends & Social Activities, and Extended Family.

## BRIEF®-P Behavior Rating Inventory of Executive Function®—Preschool Version

**Gerard A. Gioia, PhD, Kimberly Andrews Espy**

The BRIEF-P is the first standardized rating scale designed to specifically measure the range of executive function in preschool-aged children.

### Features and benefits:

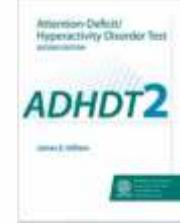

Measures multiple aspects of executive functioning; scales include Inhibit, Shift, Emotional Control, Working Memory, and Plan/Organize. Useful in assessing preschool-aged children with such medical, acquired neurological, and developmental conditions as prematurity, emerging learning disabilities and attention disorders, language disorders, traumatic brain injuries, lead exposure, and pervasive developmental disorders/autism.

## Attention-Deficit/Hyperactivity Disorder Test (ADHDT) 2nd Ed. (ADHDT-2)

James E. Gilliam

The Attention-Deficit/Hyperactivity Disorder Test, now in its second edition helps teachers, parents, and clinicians identify ADHD in individuals and estimate its severity. It's based on the 2013 diagnostic criteria for attention-deficit/hyperactivity disorder adopted by the APA and published in the Diagnostic and Statistical Manual of Mental Disorders—Fifth Edition (DSM-5). The test yields standard scores, percentile ranks, severity levels, and probability of ADHD. The test has 33 clearly stated items that describe the characteristic behaviors of persons with ADHD. The items are grouped into two subscales: Inattention and Hyperactivity/Impulsivity.

### PRODUCT OVERVIEW

## Adult Inventories-4R Deluxe Kit (ASRI-4R)

Kenneth D. Gadow, Joyce Sprafkin and Margaret Weiss

The Adult Inventories include the behavioral symptoms of more than two dozen DSM-IV™ psychiatric disorders. The Adult Self-Report Inventory-4 (ASRI-4) is completed by the patient (135 items), and the Adult Inventory -4 (AI-4) is filled out by someone who knows the patient well. When clinicians obtain ratings prior to the patient interview, they can review the answers and ask more detailed questions about specific problem areas, which can save time as well as highlight easily overlooked comorbid conditions. The Adult Self-Report Inventory can be scored according to symptom count criteria (diagnostic model) or symptom severity model (normative data model). ASRI-4 scores demonstrate satisfactory internal consistency and test-retest reliability, correlate with specialized measures of ADHD, anxiety, depression, bipolar disorder, social phobia, PTSD, eating disorders, and substance use, and differentiate patients with versus without specific diagnoses and between clinical and nonclinical samples. The normative sample was composed of 900 adult men and women. T scores and raw scores for males and females are presented separately on Symptom Severity Profile score sheets. The low to moderate correlations between patient (ASRI-4) and other informant (AI-4) reports support the use of AI-4 ratings in adult psychiatry.

## Early Childhood Parenting Skills (ECPS)

Richard R. Abidin

This modular program is designed to teach parents the skills that are recognized as key to successful parenting: developing a positive relationship, communication, discipline, managing emotions, and developing appropriate structure.

The manual organizes current knowledge about children and their development into a systematic program for basic parenting skills training. Section I provides information that will be useful to the professional before the training begins. Section II contains a scripted narrative and notes to the professional for each of the 19 sessions that form the substantive core of the program. These sessions are drawn from four general areas: self-concept, relationships, behavioral principles, and cognitive psychology. Professionals are free to use this modular program in a flexible manner, selecting appropriate sessions and/or modules to meet specific needs. Section III provides five different lecture/workshops designed as single-session presentations. Section IV provides an extensive annotated bibliography, which is also included in the Parenting Skills Workbook.

## Early Childhood Attention Deficit Disorders Evaluation Scale (ECADDES)

Stephen B. McCarney

The Early Childhood Attention Deficit Disorder Evaluation Scale (ECADDES) enables educators, school and private psychologists, psychiatrists, pediatricians, and other medical personnel to evaluate Attention-Deficit/Hyperactivity Disorder in females ages 24 through 83 months and males ages 24 through 78 months from input provided by primary observers of the child's behavior.

The ECADDES was developed from research in behavior disorders, learning disabilities, and Attention-Deficit/Hyperactivity Disorder; current literature in psychology, neurology, and education; and current practices in identification and diagnosis. The subscales, Inattentive and Hyperactive-Impulsive, are based on the current characteristics of ADHD. The results provided by the scale are commensurate with criteria used by educational, psychiatric, and pediatric professionals to identify Attention-Deficit/Hyperactivity Disorder in children. The scale is available in two versions: School Version, a reporting form for educators, and Home Version, a reporting form for parents/guardians. Internal consistency, test-retest, and inter-rater reliability; item and factor analysis; and content, diagnostic, criterion-related, and construct validity are documented and reported for the scale.

## PRODUCT OVERVIEW

## Early Childhood Behavior Scale (ECBS)

Stephen B. McCarney

The Early Childhood Behavior Scale (ECBS) was developed in response to frequent requests for evaluation/assessment and diagnostic input in early childhood behavior disorders. Based on the definition and criteria for emotional disturbance and behavioral disorders, the ECBS provides the standardized profile information and specific indicators necessary to determine which students are in need of intervention, behavioral support, and the opportunity to learn more appropriate behavior. Since early intervention has now gained universal support, the ECBS provides the necessary documentation and diagnostic information to begin a screening, intervention, and teaching program to improve the child's chances of success.

## Adult Attention Deficit Disorders Evaluation Scale (A-ADDES)

Stephen B. McCarney, Ed.D. & Paul D. Anderson

The Adult Attention Deficit Disorder Evaluation Scale (A-ADDES) enables private and clinical psychologists, psychiatrists, and other mental health professionals to evaluate and diagnose Attention-Deficit/Hyperactivity Disorder in adults from input provided by a self-report, a supervisor or co-worker in the workplace, and a significant other in the home environment.

The A-ADDES was developed from research in Attention-Deficit/Hyperactivity Disorder; current literature in psychology and neurology; and current practices in identification and diagnosis. The subscales, Inattentive and Hyperactive-Impulsive, are based on the current characteristics of ADHD. The results provided by the scale are commensurate with criteria used by psychiatric professionals to identify Attention-deficit/Hyperactivity Disorder in adults. The scale is available in three versions: Self-Report, a reporting form for the patient; Home, a reporting form for spouse, roommate, or friend; and Work, a reporting form for supervisors or co-workers. Internal consistency, test-retest, and inter-rater reliability; item and factor analysis; and content, diagnostic, and construct validity are documented and reported for the scale.

## Autism Spectrum Disorder Evaluation Scale (ASDES)

Tamara J. Arthaud

The Autism Spectrum Disorder Evaluation Scale (ASDES) was developed based on the most commonly recognized definition of Autism Spectrum Disorder (ASD) as defined by the American Psychiatric Association (APA) (2013) in the DSM-5™. It has school and home versions to document behavior observations in the school and residential environments. It is nationally standardized for ages 3 through 18 years of age. Subscales, based on the definition, include Social-Emotional Reciprocity, Nonverbal, Relationships, Stereotyped/Repetitive, Routines/Rituals, Interests, and Sensory.

The Autism Spectrum Disorder Evaluation Scale measures the characteristics typically associated with Autism Spectrum Disorder as described by the medical profession and observed by educators, psychologists, and psychiatrists. The Home Version provides doctors, therapists, and educators documentation and frequency of the characteristics observed in the home setting. The School Version allows educators to document observations of behavior in the school environment. Combining both versions provides a broader assessment of the child's social, emotional, academic, and communication strengths and weaknesses across different environments. Both scales contribute valuable information to the identification process of children and youth with Autism Spectrum Disorder. The following functions are served by the instrument: measurement of behavior by primary observers in the school or residential environment; comparison of an individual student to a national standard for screening purposes; identification of the child's characteristics of Autism Spectrum Disorder as defined by the American Psychiatric Association; pinpointing areas of need for behavioral intervention/improvement; identification of goals, objectives, and interventions for the student's IEP, and program implementation with the use of the Autistic Disorder Intervention Manual.

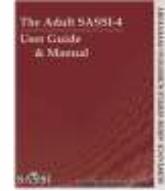

## Substance Abuse Subtle Screening Inventory-4 (SASSI-4): Adult

Franklin G. Miller, James Roberts, Marlene K. Brooks and Linda E. Lazowski

The revised SASSI-4 helps identify the probability of substance dependence and substance abuse disorders and provides information to help you select appropriate treatment.

### Features and benefits

- Includes a new Prescription Drug scale to identify individuals likely to be abusing prescription medications.
- Screens for Substance Use Disorder (SUD) along the full DSM-5™ continuum of severity.
- Distinguishes likely SUD from other psychological disorders.
- Identifies the presence or absence of SUD even when other psychological symptoms are present.
- Subtle items added to the SAT scale enhance SUD identification.

## Child Sexual Behaviour Inventory (CSBI)

William N. Friedrich and ABPP

The CSBI is a parent report (mother or primary female caregiver) measure of sexual behavior in children. It is intended for use with children who have been or who may have been sexually abused. To fully understand each child and ensure his or her safety, it is essential that the CSBI be used in combination with other clinical measures and procedures. The CSBI test booklet contains 38 items assessing a wide range of sexual behaviors that cover nine major content domains: Boundary Issues, Sexual Interest, Exhibitionism, Sexual Intrusiveness, Gender Role Behavior, Sexual Knowledge, Self-Stimulation, Voyeuristic Behavior and Sexual Anxiety. The 38 items are written at a 5th-grade reading level. The mother (or primary female caregiver) writes directly in the Test Booklet, indicating how often she has observed each of the listed behaviors during the preceding six months. Each item is rated on a 4-point scale from 0 (never) to 4 (at least once a week). The carbonless form is designed to be hand-scored by the examiner and includes a Score Summary box for recording raw scores and T-score conversions.

## Behavior Rating Inventory of Executive Function®, Second Edition

ADHD Form (BRIEF®2 ADHD Form)

Gerard A. Gioia, Peter K. Isquith, Steven C. Guy and Lauren Kenworthy,

BRIEF2 scores and classification statistics within an evidence-based approach to predict likelihood of ADHD and determine subtype.

### Features and Benefits

Helps evaluators "rule in" ADHD and "rule out" other explanations for observed behaviors.

Uses scores from BRIEF2 Parent and/or Teacher Forms or PAR iConnect reports.

Helps inform development of IEP goals.

## Behavior Rating Inventory of Executive Function®-Adult Version (BRIEF®-A)

**Robert M. Roth, Peter K. Isquith and Gerard A. Gioia**

The BRIEF-A is a standardized measure that captures views of an adult's executive functions or self-regulation in his or her everyday environment. Two formats are used—a self-report and an informant report. The Self-Report Form is designed to be completed by adults with a wide variety of developmental, systemic, neurological, and psychiatric disorders such as attention disorders, learning disabilities, autism spectrum disorders, traumatic brain injury, multiple sclerosis, depression, mild cognitive impairment, dementias, and schizophrenia. The Informant Report Form is administered to an adult informant who is familiar with the rated individual's everyday functioning. It can be used alone when the rated individual is unable to complete the Self-Report Form or has limited awareness of his or her own difficulties, or with the Self-Report Form to gain multiple perspectives on the individual's functioning.

## Behavior Rating Inventory of Executive Function®-2nd Ed. (BRIEF®-2)

**Gerard A. Gioia, Peter K. Isquith, Steven C. Guy and Lauren Kenworthy**

The BRIEF is useful in evaluating children with a wide spectrum of developmental and acquired neurological conditions, such as: Learning disabilities, Low birth weight, Attention-deficit/hyperactivity disorder, Tourette's disorder and Traumatic brain injury. High internal consistency (alphas = .80-.98); test-retest reliability ( $r_s = .82$  for parents and .88 for teachers); and moderate correlations between teacher and parent ratings ( $r_s = .32-.34$ ). Convergent validity established with other measures of inattention, impulsivity, and learning skills; divergent validity demonstrated against measures of emotional and behavioral functioning; Working Memory and Inhibit scales differentiate among ADHD subtypes.

## Arizona Battery for Communication Disorders of Dementia (ABCD)

**Kathryn Bayles and Cheryl Tomoeda**

The Arizona Battery for Communication Disorders of Dementia is a standardized test battery for the comprehensive assessment and screening of dementia patients. It includes 14 subtests that evaluate linguistic expression, linguistic comprehension, verbal episodic memory, visuospatial construction, and mental status. Subtests can be given individually or collectively. The results are useful for differential diagnoses, developing treatment goals and patient care plans, monitoring patient change over time, and discharge planning. The ABCD was standardized on Alzheimer's and Parkinson's disease patients and young and older non-disabled individuals. The manual contains information on validity and reliability.

## Adolescent Symptom Inventory-4R

**Kenneth D. Gadow and Joyce Sprafkin**

The Adolescent Symptom Inventory-4R (ASI-4R) is a behavior rating scale for evaluating the symptoms of DSM-IV and DSM-5 emotional and behavioral disorders among youth between 12 and 18 years old who are attending middle or secondary school. There are both parent- and teacher-completed versions. The ASI-4R: Parent Checklist contains 120 items for emotional and behavioral disorders, and the ASI-4: Teacher Checklist contains 79 items. For each multi-item disorder in the ASI-4R Parent Checklist there is an Impairment question (i.e., the degree to which symptoms interfere with the youth's social or academic functioning). The ASI-4R Parent Checklist can be read to the parent by a qualified clinician thus serving as a structured clinical interview.

## Stress Index for Parents of Adolescents™ (SIPA™)

**Peter L. Sheras, Richard R. Abidin**

The SIPA is a screening and diagnostic instrument that identifies areas of stress in parent-adolescent interactions and is appropriate for parents of adolescents. This upward extension of the popular Parenting Stress Index (PSI) for parents of children ages 1 month to 12 years allows a clinician or researcher to examine the relationship of parenting stress to adolescent characteristics, parent characteristics, the quality of the adolescent-parent interactions, and stressful life circumstances. Four subscales measure adolescent characteristics: Moodiness/Emotional Lability, Social Isolation/Withdrawal, Delinquency/Antisocial, Failure to Achieve or Persevere. Four subscales measure parent characteristics: Life Restrictions, Relationship with Spouse/Partner, Social Alienation, Incompetence/Guilt.

## Transition Behavior Scale 3rd Ed. (TBS-3)

**Stephen B. McCarney & Tamara J. Arthaud**

The Transition Behavior Scale-Third Edition (TBS-3) was developed as a measure of a student's readiness for transition to employment and independent living. The TBS-3 provides a measure of those behavioral characteristics most predictive of behavior in society in general and employment specifically. The TBS-3 subscales measure a student's behavior in the areas of Work Related, Interpersonal Relations, and Social/Community Expectations.

## College Adjustment Scale (CAS)

**William D. Anton and James R. Reed**

This comprehensive screening instrument identifies problems frequently experienced by college students. Primarily intended for use in college counseling and guidance centers, the CAS will prove helpful in any clinical setting where college students are clients. The CAS assesses nine areas of adjustment difficulties: Anxiety, Depression, Suicidal Ideation, Substance Abuse, Self-esteem Problems, Interpersonal Problems, Family Problems, Academic Problems, and Career Problems. Students rate the 108 CAS items on a 4-point scale ranging from false, not at all true to very true. Responses are entered on a carbonless, self-scoring Answer Sheet. Scores are then easily transferred to the profile area. Scoring and profiling takes only 3-5 minutes.

## Children's Academic Intrinsic Motivation Inventory (CAIMI)

**Adele E. Gottfried**

The CAIMI is an excellent resource for differentiating motivation from achievement and ability factors. It is a valuable part of a psychodiagnostic battery for evaluating academic failure or delay. Distinguishing between motivation, achievement, and ability is of utmost importance to allow for a more complete and accurate assessment of school difficulties and for developing specific interventions. The CAIMI is also useful for the general population of students in addition to those with school difficulties. You also can use the information derived from the CAIMI for counseling students with regard to academic interests and course selection, in instructional planning to stimulate motivation in weak areas and continue to facilitate intrinsic motivation in strong areas, in providing individualized program planning, and in program and educational evaluation by schools and school districts.

**Early Childhood Inventory-5 (ECI-5)****Joyce Sprafkin and Kenneth D. Gadow**

The Early Childhood Inventory-5 (ECI-5) is a behavior rating scale for DSM-5 emotional and behavioral disorders among preschool-aged children between 3 and 6 years old who are not yet attending elementary school (including kindergarten). There are both parent- and teacher-completed versions. The ECI-5: Parent Checklist contains 126 items for over two dozen emotional and behavioral disorders, and the ECI-5: Teacher Checklist contains 103 items. For each multi-item disorder there is an impairment question (i.e., the degree to which symptoms interfere with the youth's social or academic functioning). The ECI-5 can be read to the parent by a qualified clinician thus serving as a structured clinical interview.

**DASH-3: Developmental Assessment for Individuals with Severe Disabilities- 3rd Ed.****Mary Kay Dykes and Daniel W. Mruzek**

The DASH-3 is a criterion-referenced measure of specific skill levels in persons of all ages who have severe and/or multiple physical/sensory disabilities, including persons with severe and profound intellectual disability ("mental retardation") and autism spectrum disorders. The scales are also appropriate for individuals with mild to moderate disabilities; those who have single disabling conditions (e.g., individuals with visual impairment or paraplegia), and children who are functioning chronologically from birth to 6 years of age. Because the DASH-3 items identify specific behaviors and scoring criteria describe graduated levels of support, it may be used to track progress with targeted skills, so that timely changes may be made to the individual's intervention program.

**Eyberg Child Behavior Inventory & Sutter-Eyberg Student Behavior Inventory- Revised****Sheila Eyberg**

The ECBI and the SESBI-R are comprehensive, behaviorally specific rating scales that assess the current frequency and severity of disruptive behaviors in the home and school settings, as well as the extent to which parents and/or teachers find the behavior troublesome. Both instruments consist of items that represent common behaviors in all children. The variety and frequency of these behaviors distinguishes normal behavior problems from conduct-disordered behavior in children and adolescents. The Professional Manual provides normative data and information on the psychometric strength of both instruments.

## Brief Problem Monitor BPM/6-18 Starter Kit

Thomas M. Achenbach, Paul A. Newhouse & Leslie A. Rescorla

BPM/6-18 forms are completed by parents, teachers, or youths in 1-2 minutes to rate functioning over user-specified periods of days, weeks, or months. The items are from the CBCL/6-18, TRF, and YSR. They are scored on Internalizing (INT), Attention Problems (ATT), Externalizing (EXT), and Total Problems (TOT) scales.

## Psychosocial Evaluation & Threat Risk Assessment™ (PETRA™)

Jay Schneller

Following a threat of violence, the PETRA enables you to analyze the context of psychosocial, ecological, and coping/resiliency factors to assist in the identification, assessment, intervention and treatment planning, and behavioral management of adolescents who pose a risk of targeted violence toward others. The PETRA provides four domain scores (i.e., Psychosocial, Resiliency Problems, Ecological, Total), eight cluster scores (i.e., Depressed Mood, Alienation, Egocentrism, Aggression, Family/Home, School, Stress, Coping Problems), two Response Style Indicators (i.e., Inconsistency, Social Desirability), and eight Critical Items.

## Scales of Independent Behavior-Revised (SIB-R)

Robert H. Bruininks, Richard W. Woodcock, Richard F. Weatherman and Bradley K. Hill

The Scales of Independent Behavior-Revised (SIB-R) is a comprehensive, norm-referenced assessment of adaptive and maladaptive behaviors used to determine a person's level of functioning in key behavior areas. It may be administered in a structured interview or by a checklist procedure. All items appear in each response booklet to facilitate either administration procedure. The SIB-R can be administered using a structured interview procedure or a checklist procedure. The checklist-administration procedure is often preferred when a face-to-face interview is not necessary or practical. These options give examiners maximum flexibility when using the SIB-R.

## Multidimensional Health Profile

Linda S. Ruehlman, Richard I. Lanyon and Paul Karoly

The MHP is a comprehensive screening instrument designed for general use in health-related settings. Evidence over the past 30 years indicates that early identification of adjustment disorders, dysfunctional attitudes, and health-compromising habits can facilitate cost-effective prevention programs and overall improvement of health care quality. This is the first instrument to provide comprehensive information about psychosocial and health functioning. The MHP materials consist of a Professional Manual and two test booklets written at a fourth-grade reading level.

## Parent-Child Relationship Inventory

Anthony B. Gerard

This unique self-report inventory tells you how parents view the task of parenting and how they feel about their children. Designed for use with mothers or fathers of 3- to 15-year-old children, the PCRI gives you a clear, quantified description of the parent-child relationship. And it identifies specific areas in which problems may occur. Standardized on more than 1,100 parents across the United States, the PCRI includes 78 items covering seven distinct scales: Parental Support, Satisfaction With Parenting, Involvement, Communication, Limit Setting, Autonomy and Role Orientation. In addition, two validity scales alert you to the possibility that the parent is responding inconsistently or portraying the parent-child relationship in an unrealistically positive light.

## Parenting Alliance Measure (PAM)

Richard R. Abidin and Timothy R. Konold

The PAM is a useful screening and diagnostic instrument for family counseling, joint custody evaluations, identification of dysfunctional parenting skills, and assessing the impact of intervention. The PAM was standardized on 1,224 parents of children from the general population and a clinical sample of 272 parents of children diagnosed with ADHD, CD, ODD, or other problems. The only measure that assesses the parenting aspects of a couple's relationship. Validity studies show the PAM to be correlated in the expected directions with measures of parenting stress, family and marital functioning, children's social skills and psychosocial adjustment, and other parent characteristics.

Includes PAM Professional Manual and 50 Hand-Scorable Test Forms

## (Piers-Harris™ 3) Piers-Harris Self-Concept Scale, Third Edition

Ellen V. Piers, Dale B. Harris and David S. Herzberg

The Piers-Harris 3 quickly measures self-concept in children, adolescents, and young adults, and identifies individuals who need further testing or treatment. While retaining core features of the widely used Piers-Harris 2, this revised edition has been upgraded with a broader age range and updated item content enhanced with improved readability and clarity. Items reflecting bullying, social isolation, and body image have been added to better assess social acceptance and physical self-concept.

## ABDS: Adaptive Behavior Diagnostic Scale

Nils A. Pearson \* James R. Patton \* Daniel W. Mruzek

The Adaptive Behavior Diagnostic Scale (ABDS) is an interview-based rating scale that assesses the adaptive behavior of individuals between the ages of 2 through 21 years. The primary function of the ABDS is to establish the presence and the magnitude of adaptive behavior deficits. The ABDS scores are compatible with state and federal special education classification systems and consistent with the DSM-V and American Association on Intellectual and Developmental Disorders (AAIDD) definitions of intellectual disability. The ABDS may be used to assess the adaptive behavior of individuals with or suspected of having intellectual disability, autism spectrum disorder, learning disabilities, mental or behavioral health condition or other similar concerns. The test yields reliable and valid scores for three adaptive behavior domains (Conceptual, Social, Practical), composed of 50 items each. Specific skill areas measured in the three domains and the overall composite score are described below: Conceptual Domain, Practical Domain & Adaptive Behavior Index

## Preschool and Kindergarten Behavior Scales- 2nd Ed.

**Kenneth W. Merrell**

The Preschool and Kindergarten Behavior Scales-Second Edition (PKBS-2) is a behavior rating scale designed for use with children. This unique behavior rating scale is easy to use, very practical, and based on a solid foundation of research. With 76 items on two separate scales, it provides an integrated and functional appraisal of the social skills and problem behaviors of young children. The scales can be completed by a variety of behavioral informants, such as parents, teachers, and other care givers. Separate score conversion tables are available for home-based and school-based raters. Completion of the rating form takes about 12 minutes. The Social Skills scale includes 34 items on 3 subscales: Social Cooperation, Social Interaction, and Social Independence.

## Frontal Systems Behavior Scale

**Janet Grace and Paul F. Malloy**

The FrSBe, formerly known as the Frontal Lobe Personality Scale (FLoPS), provides a brief, reliable, and valid measure of three frontal systems behavioral syndromes: apathy, disinhibition, and executive dysfunction. It also quantifies behavioral changes over time by including both baseline (retrospective) and current assessments of behavior. Research has demonstrated that many individuals with frontal lobe damage are capable of normal performance on traditional neuropsychological measures. However, their behavior in natural settings is often disordered, resulting in severe impairment in social and occupational functioning.

## Personal Stress & Well-being Assessment

**Jon Warner**

This 84-item, self-scoring assessment enables an individual to learn to manage stress effectively. The Personal Stress and Well Being assessment provides scores on 7 competencies that impact personal stress levels:

- Predisposition (Do you put yourself under pressure?)
- Physical Fitness (Do you actively manage your physical condition?)
- Nutrition and Diet (Do you influence your eating choices to eat healthier?)
- Personal Well-being (Do you avoid practices that are bad for your body?)
- Emotional Balance (Are you in emotional balance most of the time?)
- Emotional Habits and Control (Can you control your emotions?)
- Work Life (Do you manage and control your work or does it control you?)

## Attention Deficit Disorders Evaluation Scale 3rd Ed. (ADDES-5)

Stephen B. McCarney &amp; Tamara J. Arthaud

The ADDES-3 evaluate and diagnose Attention-Deficit/Hyperactivity Disorder in children and youth from input provided by primary observers of the student's behavior. The ADDES-3 was developed from research in behavior disorders, learning disabilities, and Attention-Deficit/Hyperactivity Disorder; current literature in psychology, neurology, and education; and current practices in identification and diagnosis. The subscales, Inattentive and Hyperactive-Impulsive, are based on the current subtypes of ADHD. The results provided by the scale are commensurate with criteria used by educational, psychiatric, and pediatric professionals to identify Attention-Deficit/Hyperactivity Disorder in children and youth. The scale is available in two versions: School Version, a reporting form for educators, and Home Version, a reporting form for parents. Internal consistency, test-retest, and inter-rater reliability; item and factor analysis; and content, diagnostic, criterion-related, and construct validity are documented and reported for the scale.

## Emotional Or Behavior Disorder Scale - Revised (EBDS-R)

Stephen B. McCarney &amp; Tamara J. Arthaud

The EBDS-R was developed to contribute to the early identification and service delivery for students with emotional or behavioral disorders. It is based on the National Mental Health and Special Education Coalition definition of emotional or behavioral disorder and the theoretical construct of the federal definition (IDEA). The EBDS-R: Behavioral Component assesses three areas identified in the definition: Academic Progress, Social Relationships, and Personal Adjustment. The EBDS-R: Vocational Component assesses the fourth area identified in the definition: Work Related, Interpersonal Relations, and Social/Community Expectations. For schools and institutional settings, the EBDS-R provides the criteria by which identification of emotional or behavior disorders is now being made.

## Clinical Assessment of Depression

Bruce A. Bracken, &amp; Karen Howell

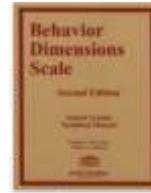

The CAD is a 50-item self-report instrument that is comprehensive, highly reliable and sensitive to depressive symptomatology throughout the life-span. It is closely aligned with the hallmarks of depressive mood and anhedonia as well as the additional seven criteria for major depressive episodes listed in the DSM-IV-TR. The items are general enough to be relevant to children, adolescents and adults while simultaneously providing content that is focused enough to address the unique characteristics of children and adolescents (e.g. irritability), as well as adults (e.g. delusion syndrome characteristics).

## Behavior Dimensions Scale 2nd Ed. (BDS-2)

Stephen B. McCarney & Tamara J. Arthaud

The BDS-2 provides an assessment of the following dimensions of behavior which interfere with success in the educational, home, and community environments of children and adolescents: Attention-Deficit/Hyperactivity Disorder, Oppositional Defiant, Conduct Disorder, Avoidant Personality, Generalized Anxiety, and Major Depressive Episode.

## Stress Coping Techniques Questionnaire

**Dr. Vijaya Lakshmi & Dr. Shruti Narain**

Intended to use with individuals ages 15 years and above, the stress coping techniques scale consists of 61 items. It helps to easily assess the cognitive and behavioural strategies used by an individual in day-to-day life to manage the demands of a situation when these are appraised as taxing or stressful. It has two dimensions- Adaptive (Positive) Stress Coping Techniques and Maladaptive (Negative) Stress Coping Techniques. It can be administered either by self or by the investigator, in group as well as individually. It is a Five- point Likert type scale. It has a high degree of reliability and validity. Grade norms have been developed. This scale is available in both English and Hindi.

## Attitude towards Domestic Violence Scale

**Ekta Soni & Rakesh Kumar Behmani**

Domestic violence is not a new concept; it has prevailed in our societies from a long time and is still prevailing. The concept of women empowerment was brought up in 20th century which raised the standard of women in society. Women have become stronger but crimes against women have not stopped even in this 21st century. Such issues still remain unresolved. Many psychologists and sociologists have given different theories concerning domestic violence. These involve psychological theories where focus is on mental health and personality of the husbands and sociological theories where focus is on external factors such as family structures, education, employment, etc. therefore it is essential to assess attitude towards domestic violence in Indian context. Further there is scarcity of standardized Indian tool to assess attitude towards domestic violence scale.

## Attitude Towards Using Web – Based Information Resources Scale (AWIRS)

**Mumtaj Abid & Dr. P.M Naushad Ali**

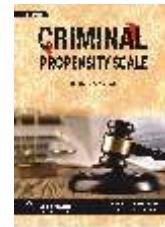

This scale will be useful in examining the acceptance of web resources among the researchers along with the perceived advantages, users' satisfaction, impact that the web resources have on the respondent's research and academic work and obstacles that come during the use of web resources. The scale will be significantly helpful in providing a detailed, up-to- date picture and identifying major emerging trends about the scholarly use of web resources. It consists of 39 items and has only one dimension .It is a five point Likert scale.

## Criminal Propensity Scale

Shubhra Sanyal

The Criminal Propensity Scale assesses the Criminal Propensity in the normal population and identifies the vulnerable group which can then be effectively counselled. In the case of offenders, the 'C' scale can foretell the state of mind of the individual to be released from prison and the level of his criminal propensity which may hinder his rehabilitation. The Scale is an attempt has been made to diagnose the responses of non-criminals and criminals on certain specific items of EPQ, which measure Psychoticism, Neuroticism and Extraversion. Scaling techniques to measure personality and attributes could broadly be categorized into 2 types, self-reporting and projective techniques and their utilities depend on the purpose of the study and the situation in which they are required. It consists of 39 items and a scoring key. It is available in English.

## Attitude Towards Home Environment

Mukhtar Ahmad Wani & Prof. Aejaz Masih

The attitude scale towards home environment is based on ten dimensions spread over three parameters, Interrelation parameter includes dimension as Family integration, Conflict, Self-expression and Social climate of the family. Individual development parameter includes dimension as Guidance provided at home, Emotional support, Success orientation and Independence and System organization parameter includes dimensions like Organization and management of family and Control. Then the items associated with ten dimensions were selected and each item was selected according to the nature of the dimension. For the selection of the items, previous tools and studies related with home environment were consulted along with the available literature. While selecting items, the nature of item measured the desired dimension of home environment were taken into consideration. The final scale includes 71 items to measure ten dimensions of home environment. Content validity was evaluated by more than 20 experts and validity was calculated by correlation between the score of each dimension and total score of the scale. To know the discrimination validity for each dimension of the test, 't' test for two independent samples was used (high group and low group). The reliability of the scale was tested by calculating Alpha Coefficients. Overall it is concluded that the scale has good construct and discrimination validity. Moreover, all the values of reliability coefficient for each dimension are highly significant.

## Early Functional Communication Profile (EFCP)

Sharlet Lee Jensen

The targeted skills are hallmarks of atypical development in the preverbal child. The profile measures subtle, functional changes in nonverbal communication skills in children with severe disabilities along with larger gains in children with moderate disabilities. Use it to gather information that will help determine a starting point in therapy and show progress over time.

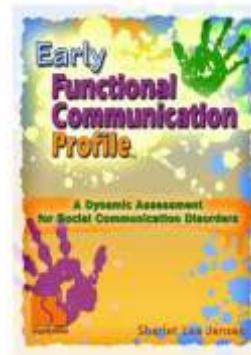

**The Early Functional Communication Profile is appropriate to use with children who have:**

1. Suspected or diagnosed Autism Spectrum Disorder.
2. Severe to profound cognitive impairments.
3. Coexisting disorders.
4. Augmentative and alternative communication.

The Early Functional Communication Profile is a criterion-referenced tool. As such, it does not supply age or number scores. The test's precise descriptive measures tell you what the child CAN do and how she responds to different types of prompts.

The assessment is dynamic- a hierarchy of prompts provides information about what skills the child performs with some degree of adult assistance. Skills and the level of progress are delineated by:

1. Developmental level-skills are arranged from easiest to hardest.
2. Level of environmental prompt- can be where the tester or test items are positioned (e.g., in front, to the side, or in back of the child); a gestural prompt (e.g., handing an object to the child, pointing); or verbal cues (e.g., saying "your turn," asking a question).
3. Level of adult-action prompt- subtle physical and visual prompts such as hand-over-hand, patting the chest or arm, waiting with hand reaching out, waiting expectantly, etc.

## Risk Inventory and Strengths Evaluation (RISE)

Sam Goldstein, PhD, and David Herzberg

The RISE is an all-new rating scale that provides a comprehensive understanding of both high-risk behaviors and psychological strengths across home, school, and community settings. The psychological strengths represent important components of resilience - the quality that enables young people to cope effectively with the stressors and challenges of daily life. Cutoff scores identify high-risk status, prompting clinicians to focus on critical items where safety may be a concern. The RISE Index score compares the individual's strengths and risk factors, which helps develop a well-informed intervention plan.

## Draw-A-Person Screening Procedure for Emotional Disturbance (DAP:SPED)

**Jack Naglieri, Timothy McNeish and Achilles Bardos**

DAP:SPED helps identify children and adolescents who have emotional problems and require further evaluation. It has items that are used to rate the drawings of a man, a woman, and the self. The items were based on an exhaustive review of the literature on human figure drawings, and the test was written to be fast to score. It was normed on a nationwide sample of 2,260 students representative of the nation as a whole with regard to gender, race, ethnicity, geographic region, and socioeconomic status. It yields a standard T score that determines if further assessment is not indicated, indicated, or strongly indicated, and may be conducted individually or in a group.

## Social Communication Disorder Scale (SCDS)

**Samm N. House**

The Social Communication Disorder Scale (SCDS) is based on the American Psychiatric Association (APA) definition of social (pragmatic) communication disorder in the Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition (DSM-5™) (2013). The items and subscales (Social, Context, Rules, and Nonliteral) reflect the DSM-5™ diagnostic criteria.

Internal consistency, test-retest, and inter-rater reliability; item and factor analysis; and content, construct, and criterion-related validity are documented and reported for the scale.

The SCDS is an excellent screening instrument for making decisions about additional testing and services for students with social communication disorder.

## State-Trait Anger Expression Inventory-2™ (STAXI-2)

Charles D. Spielberger and ABPP

The STAXI-2™ provides easily administered and objectively scored measures of the experience, expression, and control of anger for adults and adolescents, ages 16 years and older. The STAXI-2 was developed to assess components of anger and anger expression for a detailed evaluations of normal and abnormal personality and to measure the way these components of anger contribute to medical conditions such as hypertension and coronary heart disease. Recent studies on the nature of anger and its effects on mental and physical health guided the development of the STAXI-2.

## Child Abuse Potential Inventory (CAPI)

Joel S. Milner

The CAP Inventory was designed primarily as a screening tool for the detection of physical child abuse by protective services workers in their investigations of reported child abuse cases. The CAP Inventory is a 160-item, reliable and valid objective self-report screening instrument that can assist protective services workers in making case decisions. It contains a total of 10 scales. The primary clinical scale (Abuse) can be divided into six factor scales: Distress, Rigidity, Unhappiness, Problems With Child and Self, Problems With Family, and Problems With Others. In addition, the CAP Inventory contains three validity scales: Lie, Random Response, and Inconsistency.

## Eating Disorder Inventory-3rd Referral Form Kit (EDI™-3 RF)

David M. Garner

The EDI-3 Referral Form Kit is specifically designed for allied health professionals to help identify individuals who are at risk for eating disorders. In addition to 25 EDI-3 questions, this brief self-report form includes behavioral symptom questions to identify individuals with potential eating disorders or pathology. Referral indexes (based on an individual's body mass index [BMI] only, BMI plus EDI-3 questions about excessive eating concerns, and on the responses given to behavioral questions pertaining to eating disorder pathology) are used to identify individuals who have or are at risk for eating disorders. A separate EDI-3 Referral Form Manual is included with the kit. The EDI-3 RF is hand scored and takes only 5-10 minutes to administer.

## Eating Disorder Inventory - Third Edition (EDI-3)

David M. Garner

The EDI-3 is a revision of one of the most widely used self-report measures of psychological traits or constructs shown to be clinically relevant in individuals with eating disorders—the EDI-2. This new version is a standardized and easily administered measure yielding objective scores and profiles that are useful in case conceptualization and treatment planning for individuals with a confirmed or suspected eating disorder. It also is a valuable research tool for assessing areas of psychopathology, identifying meaningful patient subgroups, and assessing treatment outcome. It can be completed in a relatively brief period of time and may be administered either individually or in a group setting.

## Thematic Apperception Test (TAT)

**H. A. Murray**

It is a method of revealing to the trained interpreter some of the dominant drives, emotions, sentiments, complexes and conflict of a personality. It is found useful in comprehensive study of personality, behaviour disorders, psychosomatic illness etc. It has 31 cards-10 for male, 10 for female and 10 common and one blank card, one has to write story after seeing card.

## Thematic Apperception Test- Indian Adaptation

**Uma Choudhary**

It is an Indian adoption of TAT originally developed by 'Henry Murray', a method of revealing the dominant drives, emotions, sentiments, complexes and conflict of a person's personality. It is found useful in comprehensive study of personality, behavior disorders, psychosomatic illness etc. It has 11 cards having human figures. Person has to write story after seeing card, and this story (as per the assumption of psychoanalysis) reveals the unconscious of a person.

## Cognitive Distortion Scales (CDS)

**John Briere**

The CDS is a 40-item, self-assessment of cognitive distortions for adults ages 18 years and older. The CDS scales reflect five types of cognitive distortion: Self-Criticism (SC)--Low self-esteem and self-devaluation as expressed in the tendency to criticize or devalue oneself. Self-Blame (SB)--Extent to which the respondent blames himself or herself for negative, unwanted events in his or her life, including events outside the respondent's control. Helplessness (HLP)--Perception of being unable to control important aspects of one's life. Hopelessness (HOP)--Extent to which the respondent believes that the future is bleak and that he or she is destined to fail. Preoccupation With Danger (PWD)--Tendency to view the world, especially the interpersonal domain, as a dangerous place.

## Measures of Psychosocial Development (MPD)

**Gwen A. Hawley**

This Eriksonian-based instrument provides a measure of the positive and negative attitudes associated with each of the eight developmental stages, the status of conflict resolution at each stage, and an index of overall psychosocial health. Because interpretation focuses on healthy personality development and growth instead of pathology, the MPD is useful in a variety of clinical, counseling, training, and research settings. The MPD consists of 27 scales. Attitudes that describe the basic dimensions of personality are measured by eight Positive and eight Negative scales. The direction and degree of resolution between the Positive and Negative scales is reflected in the eight Resolution scales.

## Personality Assessment Screener (PAS)

Leslie C. Morey

Derived from the Personality Assessment Inventory™ (PAI®), the PAS is designed for use as a triage instrument in most health care and mental health settings, as well as in corporate EAPs and college health services. This self-administered objective questionnaire was developed with reference to its parent instrument, the PAI®. The 22 PAS items are those items from the PAI that have been identified by extensive item analysis as the most sensitive to the broad range of contemporary clinical problems measured by the PAI. The items are organized hierarchically into 10 different "Elements" representing 10 distinct clinical problem domains: Negative Affect (NA), Hostile Control (HC), Acting Out (AO), Suicidal Thinking (ST), Health Problems (HP), Alienation (AN), Psychotic Features (PF), Alcohol Problem (AP), Social Withdrawal (SW) and Anger Control (AC).

## Personality Assessment Inventory (PAI)

Leslie C. Morey

With its newly revised Professional Manual, Profile Form Adults-Revised, and Critical Items Form-Revised, the PAI® continues to raise the standard for the assessment of adult psychopathology. This objective inventory of adult personality assesses psychopathological syndromes and provides information relevant for clinical diagnosis, treatment planning, and screening for psychopathology. The 344 PAI items constitute 22 nonoverlapping scales covering the constructs most relevant to a broad-based assessment of mental disorders: 4 validity scales, 11 clinical scales, 5 treatment scales, and 2 interpersonal scales. To facilitate interpretation and to cover the full range of complex clinical constructs, 10 scales contain conceptually derived subscales.

## Primer for Rorschach® Interpretation

John E. Exner

This volume is designed to facilitate interpretation of the Rorschach. The author focuses on each of the data clusters separately. He clearly identifies the basics of the interpretive process and then emphasizes the logic and tactics involved in integrating your findings. A Primer for Rorschach Interpretation reflects the latest findings regarding The Rorschach: A Comprehensive System and its use. Some new variables, recently added to the System, have been included; in addition, some older variables have been deleted from the Structural Summary.

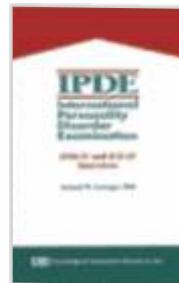

## International Personality Disorder Examination (IPDE) DSM-IV/ ICD-10

Module

Armand W. Loranger

The IPDE was developed within the Joint Program for the Diagnosis and Classification of Mental Disorders of the World Health Organization (WHO) and U.S. National Institutes of Health (NIH) and provides a uniform approach for assessing personality disorders for both the DSM-IVTM and the ICD-10 classification systems. The interview is the most widely used of its kind and is the only personality disorder interview based on worldwide field trials. The IPDE Manual contains the interview questions to assess either the 11 DSM-IV or the 10 ICD-10 personality disorders. The two IPDE modules (DSM-IV and ICD-10) contain both a self-administered screening questionnaire and a semi-structured interview booklet with scoring materials.

## Somatic Ink Blot -II

W.A.Cassell

Somatic Inkblot Test-II (SIS-II) is in Booklet Form containing 62 Inkblot images in Series A and B each with 31 images. There is also a sample image in the beginning. The test is designed for self-administration after supervised instruction. It can also be used as a group administered test particularly during selection and promotion in business organizations. The test has been used internationally on varieties of clinical population and has been found a successful test for personality assessment and diagnosis. Its therapeutic value has been emphasized by a number of clinicians internationally. The SIS uses the language of dreams, visual imagery, and symbolic thought, and emphasizes content analysis. It helps to bring out whatever is buried in the mind enclosure to consciousness, accessible for processing. Expression stimulated by ambiguous or partially ambiguous imagery can be used in therapy to test insight and to help measure treatment progress. The test accesses information about the individual not readily available from history taking, interview, mental status examination or from other forms of testing. It also elicits information, which is not consciously known to the patient, or reported as a problem. Usually, clinically significant, unblocked material, will over-ride typical normative responses directly (manifest), or it will appear in symbolized imagery, similar to dream work (latent). Because there is no time limit, "test anxiety" is reduced, and the individual is free to react in his own time, often exhibiting significant verbal and non-verbal clues to each of the inkblots.

## MCCB Measurement and Treatment Research to Improve Cognition in Schizophrenia (MATRICS) Consensus Cognitive Battery

Keith H. Nuechterlein, PhD, and Michael F. Green

Measure cognition in individuals diagnosed with schizophrenia and related disorders using tests selected by experts. The MCCB was developed to aid research toward creating medication effective for improving cognition in individuals with schizophrenia.

A standardized battery. Consists of 10 individually administered tests that measure cognitive performance in seven domains: speed of processing, attention/vigilance, working memory, verbal learning, visual learning, reasoning and problem solving, and social cognition.

**Cognistat** is a Rapid, Reliable and Affordable Cognitive Screening tool

### The Cognistat Assessment System (CAS)...

- ✓ Establishes baseline
- ✓ Monitors the progression of illness or response to treatment
- ✓ Permits longitudinal analysis
- ✓ Provides opportunity for intervention
- ✓ Identifies factors that impact test performance
- ✓ Offers medication insight
- ✓ Alerts the examiner to issues of possible concern

### The Tool of Choice for Cognitive Screening

Using an efficient screen and metric approach, Cognistat quickly assesses cognitive functioning independently in five major ability areas:

- Language
- Spatial Skills
- Memory
- Calculations
- Reasoning

### Cognistat Examines three foundational Areas:

- Attention Span
- Orientation
- Registration (Learning)

### Cognistat is the tool of choice for cognitive screening in:

- Neuropsychology
- Neurosurgery
- Speech Therapy
- Nursing Home Assessments
- Alcohol and Substance Abuse
- Neurology & Psychiatry
- Rehabilitation Medicine
- Geriatrics
- Elder Abuse Investigation

## Reynolds Adolescent Adjustment Screening Inventory (RAASI)

William M. Reynolds

Quickly identify adolescents in need of psychological evaluation and services. These adolescents may exhibit significant adjustment problems in the areas of antisocial behaviors, anger problems, and emotional distress. The RAASI can be administered to large or small groups or to individuals. Only 32 items; derived from the item pool of the Adolescent Psychopathology Scale™ (APS™). 4 scales: Antisocial Behavior (AB), Anger Control Problems (AC), Emotional Distress (ED), and Positive Self (PS). Also yields a Total Adjustment score (AdjT). Useful in a multiple-gate screening process to identify adolescents at risk. Raw score to T-score conversions for total standardization sample, gender, age group, and gender-by-age group.

## Reynolds Adolescent Depression Scale- 2nd Ed. (RADS-2)

William M. Reynolds

The RADS-2 is a brief, 30-item self-report measure that includes subscales which evaluate the current level of an adolescent's depressive symptomatology along four basic dimensions of depression: Dysphoric Mood, Anhedonia/Negative Affect, Negative Self-Evaluation, and Somatic Complaints. Interpretation of these four subscales is based on both the nature of the depression domain and the item content of the subscale. The RADS-2 standard (T) scores and associated clinical cutoff score provide the clinician or researcher with an indication of the clinical severity of the individual's depressive symptoms (normal, mild, moderate, or severe).

### PRODUCT OVERVIEW

## Sentence Completion Series (SCS)

Larry H. Brown and Michael A. Unger

The SCS consists of eight self-report forms, each with 50 content-valid sentence stems pertaining to specific areas of concern: Adult, Adolescent, Family, Marriage, Parenting, Work, Illness, and Aging. The client completes each unfinished sentence with the first thought that comes to mind. The SCS is self-administered for those who possess adequate reading ability. Forms may be administered orally for clients who are unable to read and write. The instrument is scored by the clinician who examines the statements and draws inferences from the responses. Because only a few sentence stems are common across the eight forms, multiple forms can be used with little redundancy to maximize the breadth of information obtained from a client.

## Clinical Assessment Scale for the Elderly (CASE)

Cecil R. Reynolds and Erin D. Bigler

The CASE consists of a self-rating form (Form S) and an other-rating form (Form R) that can be completed by a knowledgeable caregiver (e.g., a spouse, child, home health care worker, sibling). Form R is especially useful to verify the information provided by the patient, or when the patient is unable to complete the assessment due to physical or cognitive difficulties. Developed specifically to assess for the most prominent DSM-IV disorders among the elderly. Consists of 10 clinical scales: Anxiety (ANX), Cognitive Competence (COG), Depression (DEP), Fear of Aging (FOA), Obsessive-Compulsive (OCD), Paranoia (PAR), Psychoticism (PSY), Somatization (SOM), Mania (MAN), and Substance Abuse (SUB). Includes a valuable Fear of Aging scale that assesses an individual's level of apprehension about the aging process. CASE items are free of gender or ethnic bias.

## Rorschach Ink Blot Test

H. Rorschach

Rorschach Inkblot Test is one of the most widely used projective techniques for clinical assessment used by psychologists all over the world. It is most popular amongst various systems of interpretation both at teaching institutions in Clinical Psychology and at hospitals/clinics as well as with practicing mental health professionals. There are 10 cards in Rorschach ranging from black and white to multi coloured. subjects' perceptions of inkblots are recorded and then analyzed using psychological interpretation, complex scientifically derived algorithms, or both. Some psychologists use this test to examine a person's personality characteristics and emotional functioning. It has been employed to detect an underlying thought disorder, especially in cases where patients are reluctant to describe their thinking processes openly. The test takes its name from that of its creator, Swiss psychologist Hermann Rorschach. There are majorly three systems of scoring. 1. Beck's , 2.Klopfers, 3. Exner's

The complete set of Rorschach Ink blot test consists of cards, manual, record and analysis blank & Schemablock.

## Cluster Data Charts (Package of 25)

J.E. Exner, Jr.

This four page form provides templates to record data for each of the eight clusters (Controls, Situational Stress, Processing, Mediation, Ideation, Affect, Self Perception and Interpersonal Perception) that form the basis from which most interpretive postulates are derived. It also includes a table of Key variables to identify the appropriate order to review the clusters. Typically, interpretation directly from cluster data sets facilitates the process and improves accuracy, especially for those learning to use the test or those who do not use it frequently.

## An Interpretive Guide to the Personality Assessment Inventory™ and the PAI Structural Summary Booklet

Leslie C. Morey

In this book, Dr. Morey has consolidated the results of clinical and empirical observations into a volume that describes the state of the art in PAI interpretation. It is recommended for all practitioners and researchers who wish to maximize their use of this important instrument.

## House-Tree-Person (H-T-P)

John N. Buck

The House-Tree-Person (H-T-P), developed by John N. Buck, is one of the most distinguished and widely used projectives. The H-T-P is popular not only because it yields abundant clinical information, but also because it saves time and is easy to use. The subject simply produces three drawings--of a house, a tree, and a person. Then he or she is given the opportunity to describe, define, and interpret these drawings. Because drawing can reduce tension in testing situations, the H-T-P is often administered as the first in a battery of psychodiagnostic tests. It is an ideal way to assess personality in individuals who are culturally different, educationally deprived, developmentally disabled, or non-English-speaking. H-T-P drawings are highly sensitive to the presence of psychopathology early in its development.

## House-Tree-Person and Draw-A-Person as Measures of Abuse in Children: A Quantitative Scoring System

Valerie Van Hutton

This hardcover book provides background on projective drawing techniques and insight into the House-Tree-Person (H-T-P) and Draw-A-Person (D-A-P) techniques. The book describes the development and administration of an objective scoring system for use by clinicians, teachers, and other professionals.

The test administrator asks the child (ages 7-11 years) to complete the two drawings, which are then scored for the presence or absence of particular characteristics within four major constructs: Preoccupation with Sexually Relevant Concepts (SRC); Aggression and Hostility (AH); Withdrawal and Guarded Accessibility (WGA); and Alertness for Danger, Suspiciousness, and Lack of Trust (ADST).

## Somatic Ink Blot-I

W.A.Cassell & B.L.Dubey

Somatic Inkblot Test (SIS-I) is a 20 images Projective Inkblots Technique like Rorschach. It is administered like Rorschach and can also be self administered. The SIS uses the language of dreams, visual imagery, and symbolic thought, the most basic forms of thinking and expression. It is also the language of repression and brings whatever is buried in the mind closure to consciousness, accessible for processing. Expression stimulated by ambiguous or partially ambiguous imagery can be used in therapy to test insight and to help measure treatment progress. The body imagery is the main source of projection. The test has been used internationally and has been found useful in assessing normal personality, diagnostic assessment, therapeutic intervention and a tool during Selection and Promotion of Executives in industry.

## Clinical Assessment of Attention Deficit—Adult™ (CAT-A™)/Childern™ (CAT-C™)

Bruce A. Bracken & Barbara S. Boatwright

The CAT-A is a 108-item self-report instrument that is comprehensive, highly reliable, and sensitive to the symptomatology of attentional deficits both with and without hyperactivity for adults. Closely aligned with current diagnostic criteria, the CAT-A includes scales, clusters, and items that are sensitive to symptom presentation in differing contexts and as expressed as either internal sensations or overt behaviors. The CAT-A consists of two parts: Part 1 (Childhood Memories) assesses the individual's memories of his/her behaviors and sensations as a child; and Part 2 (Current Symptoms) assesses parallel issues in adulthood. The CAT-A provides Clinical Index scores for the Childhood Memories section, the Current Symptoms section, as well as the summation of these two sections. In addition, three validity scales are embedded within the instrument—Negative Impression, Infrequency, and Positive Impression.

## Personality Inventory for Children- Second Edition (PIC-2)

David Lachar and Christian P. Gruber

This highly regarded test is widely used by clinical and school psychologists to evaluate the emotional, behavioral, cognitive, and interpersonal adjustment of children and teens. The PIC-2 is one of three coordinated instruments: It provides the parent's description of the child; the PIY provides the child's self-report; and the SBS supplies a teacher rating. While each of these instruments has been validated to function independently, together they provide an integrated picture of the child's adjustment at home, at school, and in the community. When you need a shorter administration, the PIC-2 offers a Behavioral Summary, which is comprised of the first 96 items on the test. The Behavioral Summary Profile provides scores for the 8 scales, plus a Total Score and 3 Composites: Externalization, Internalization, and Social Adjustment. By providing two administration formats, the PIC-2 gives you a great deal of flexibility. The standard, 275-item profile assesses the full range of developmental, cognitive, adjustment, and interpersonal issues, with subscales that supply useful clinical detail and an optional critical items list divided into 9 content categories. The 96-item Behavioral Summary offers brevity, strong correlation with the full scale, a focus on current behavior that is likely to respond to treatment, and broad summary measures useful in evaluating change. The PIC-2 was standardized on ratings from 2,306 parents of boys and girls in kindergarten through 12th grade. Protocols were collected from 23 urban, rural, and suburban schools in 12 states. Participating parents represented all socioeconomic levels and all major ethnic groups. In addition, data were collected from a sample of 1,551 parents whose children had been referred for educational or clinical intervention.

## Personality Inventory for Youth

David Lachar & Christian P. Gruber

The PIY is a valid and reliable self-report measure (appropriate for individuals ages 9-19 years) that assesses emotional and behavioral adjustment, family interaction, and neuro-cognitive and attention-related academic functioning. Excellent response validity checks make the PIY useful in ruling out psychiatric problems. The PIY is composed of 270 items covering nine nonoverlapping clinical scales and 24 nonoverlapping subscales. The 24 subscales reveal specific clinical content, making the PIY an excellent diagnostic tool. In addition, four validity scales help determine whether the respondent is uncooperative or is exaggerating, malingering, responding defensively, carelessly, or without adequate comprehension. Critical Items are sorted into eight problem categories.

## Rorschach Introductory Guide Kit

George Ulett

The Introductory Guide offers a simple, methodical approach to Rorschach administration and interpretation. It includes four elements—a brief interpretive Manual, Record Booklet and Summary Forms, three laminated Scoring and Interpretation Guide Cards, and Rorschach AutoScore™ Forms. These materials put all the essential scoring and interpretive information at your fingertips. The Manual describes Rorschach administration and scoring, and shows you how to interpret the test using the Rorschach AutoScore™ Form. The Record Booklet and Summary Form is a convenient 4-page protocol, which includes all 10 Rorschach plates in miniature and in full color.

## A Rorschach Workbook for the Comprehensive System, 5th Ed. ,

J.E. Exner

A supplement to The Rorschach: A Comprehensive System textbook series, this soft cover, spiral bound workbook details the fundamentals of administration and scoring of the Rorschach Test. This latest edition contains up-to-date information concerning scoring criteria, revised norms and includes the Form Quality Tables for all ten cards.

## The Logical Rorschach - A Brief Scoring Method to Screen for Psychopathology

Edwin E. Wagner

Here is an efficient method for scoring Rorschach responses. This convenient technique yields two numerical scores: a TETRAUT score based on the number and type of autistic responses, and a PAS score based on the perceptual accuracy of the responses. These two scores--derived in less than 10 minutes--are enough to identify two types of psychopathology, one associated with thought disorder, the other with general behavioral inefficiency. What the Logical Rorschach provides is a quick way to screen for psychopathology that can be used by any clinician, regardless of his or her usual approach to the test. It is specifically designed to eliminate the complexity, redundancy, and overpathologizing of typical Rorschach scoring methods.

## Non Verbal Personality questionnaire

Douglas N. Jackson

The Nonverbal Personality Questionnaire (NPQ) is a 136-item nonverbal questionnaire that is suitable for the assessment of normal adult personality in counseling and research settings. Nonverbal assessments are ideal for cross-cultural comparisons and for people who have reading difficulties or language barriers. The items are represented by illustrations that depict personality-relevant behaviors based on Murray's system of needs, the scales of the Personality Research Form (PRF), and the Five-Factor Model of personality.

## NEO™ Five Factor Inventory-3 (NEO™-FFI-3) Adult/Adolescent Form S Kit

Paul T. Costa and Robert R. McCrae

The NEO-FFI-3, a revision of the NEO Five-Factor Inventory (NEO-FFI™), is a 60-item version of the NEO-PI-3 that provides a quick, reliable, and accurate measure of the five domains of personality (Neuroticism, Extraversion, Openness, Agreeableness, and Conscientiousness). All items on the NEO-FFI-3 were taken directly from the NEO-PI-3. It is especially useful when time is limited and global information on personality is considered sufficient. The NEO-FFI can help you understand an individual's basic emotional, interpersonal, experiential, attitudinal, and motivational styles. Fifteen of the 60 NEO-FFI items have been replaced to improve readability and psychometric properties. This revision is appropriate for respondents ages 12 years and older, with new norms provided in the Professional Manual. Self-report (Form S) and observer rating (Form R) forms are available. Administration takes as little as 10-15 minutes; calculation of raw scores takes only 1-2 minutes.

## NEO™ Personality Inventory-3 (NEO™-PI-3) Adult/Adolescent Comprehensive Kit

Paul T. Costa and Robert R. McCrae

The NEO-PI-3 is a revision of the Revised NEO Personality Inventory (NEO PI-R™), the standard questionnaire of the FFM. It is a concise measure of the five major domains of personality (Neuroticism, Extraversion, Openness, Agreeableness, and Conscientiousness) and the six facets that define each domain. Taken together, the five domain scales and the 30 facet scales facilitate a comprehensive and detailed assessment of general personality. Its age range has been extended downward, making it appropriate for use with adolescents as young as 12 years. The NEO-PI-3 retains the reliability and validity of the NEO PI-R and features new normative data. Thirty-eight items from the NEO PI-R have been revised or edited to lower the reading level and make the instrument more appropriate for younger examinees or adults with lower educational levels. The two-part carbonless Hand-Scorable Answer Sheet, usable with either Form S (for self-reports) or Form R (for observer reports), eliminates the need for separate scoring keys or templates. The NEO-PI-3 also can be scored and/or administered electronically using the NEO Software System™.

The complete set of Rorschach Ink blot test consists of cards, manual, record and analysis blank & location chart

## Five Factor Personality Inventory- Children

Ronnie L. McGhee, David J. Ehrler and Joseph A. Buckhalt

The FFPI-C: Five-Factor Personality Inventory — Children is a standardized, norm-referenced self-report inventory designed to measure personality traits and dispositions in children and adolescents, as well as adults. It was normed on a representative sample of 1,284 individuals. It is based on a modern five-factor personality theory, which concludes that five broad factors account for the majority of variance in the personality descriptors. Mental health professionals or researchers studying child and adolescent personality can use it. The inventory can be self-, individually-, or group-administered by any professional with psychological and personality assessment experience.

## Fairy Tale Test

Carina Coulacoglu, Ph.D

The FTT is used to assess the child's personality dynamics, offering information not just about single personality traits, but also on how they interrelate. The FTT can effectively be employed for: (1) personality assessment, research purposes (developmental, cross cultural and longitudinal studies), (2) diagnostic evaluation of clinical cases and (3) evaluation of the outcome of psychotherapeutic treatment.

## Inventory of Altered Self - Capacities

John Briere

This brief measure was normed on 620 individuals (ages 18 years and older) from the general population. It facilitates assessment of critical psychological issues with individuals who have personality-level difficulties and/or a history of significant childhood trauma. The IASC is an ideal component of a comprehensive assessment of adult psychopathology. It helps to identify specific targets for treatment, such as identity disturbance or affect regulation problems; to predict potential problems that may arise during psychotherapy, such as idealization-devaluation or easily triggered abandonment issues, and to provide clinical data to corroborate diagnostic hypotheses, especially those involving dysfunctional personality traits or disorders. The IASC consists of seven 9-item scales, two of which have subscales, and it requires a 6th-grade reading level. Respondents rate the frequency of occurrence of each symptom item on a 5-point scale from Never to Very Often over the prior 6 months. The Professional Manual provides information on the development, administration, scoring, interpretation, and psychometric characteristics of the IASC, as well as normative data from the general population and validity data from university student and clinical samples. Test results can help to corroborate and explore an Axis-II diagnosis (e.g., Borderline Personality Disorder) and improve treatment response by identifying specific areas of self-other difficulty that might interfere in the client-therapist relationship.

## The OCD Workbook Third Edition

Bruce M. Hyman and Cherry Pedrick

This book includes detailed, easy-to-read descriptions of the very latest behavioral techniques for OCD. Used either by OCD sufferers or the therapists treating them, it offers step-by-step procedures for exposure and ritual prevention, as well as cutting-edge cognitive techniques. There are clear suggestions for working with a variety of OCD forms, including scrupulosity, hit and run, and hoarding problems. The new second edition offers the latest information about the neurobiological causes of obsessive-compulsive disorder, new developments in medication and other treatment options for the disorder.

## Five-Factor Nonverbal Personality Questionnaire

Sampo V. Paunonen, Douglas N. Jackson, and Michael C. Ashton

The Five-Factor Nonverbal Personality Questionnaire (FF-NPQ) depict personality-relevant behaviors that are based on Murray's (1938) system of needs, the scales of the Personality, and the Five-Factor Model of personality. This nonverbal measure asks respondents to rate the likelihood that they would engage in the type of behavior depicted in the item illustration on a 7-point Likert scale. Response options range from extremely likely to extremely unlikely. The 60-item FF-NPQ takes approximately 10 minutes to complete. It measures Extraversion, Agreeableness, Conscientiousness, Neuroticism & Openness to Experience--better known as the 'Big 5' factors of personality.

**Vocational Preference Inventory™ (VPI™)****John L. Holland**

Assess career interests with this brief personality inventory. Clinicians and career counselors find the VPI to be useful in one-on-one counseling sessions with high-school and college students, as well as with adults. Although the VPI is similar to the Self-Directed Search® (SDS®), it is a psychological inventory, whereas the SDS is similar to a vocational counseling experience. The clinician scores the VPI, and the user scores the SDS. The VPI assesses five dimensions not covered by the SDS, but offers less comprehensive career assessment than the SDS. The VPI consists of 160 occupations representing the six personality types in the RIASEC theory of personality as well as five additional dimensions.

**Jackson Personality Inventory-Revised****Douglas N. Jackson**

Personality can determine important characteristics like dependability, self-discipline, leadership, and the ability to make a good impression on others. The Jackson Personality Inventory-Revised (JPI-R) is widely considered to be one of the most psychometrically sound measures of personality. In one convenient form, the JPI-R provides a measure of personality that reflects a variety of social, cognitive, and value orientations, which affect an individual's functioning. Scale reorganization in terms of five higher-order dimensions: Analytical, Extroverted, Emotional, Opportunistic, and Dependable.

**Career Directions Inventory Online****Douglas N. Jackson**

The Career Directions Inventory (CDI) is designed to facilitate educational and career exploration. It matches an individual's interests with related career and academic paths. The CDI is suitable for a wide spectrum of the population, not only for those who are headed for post-secondary school or a professional career. The CDI consists of 100 triads of statements describing job related activities. For each triad, the respondent is asked to mark his/her most preferred and least preferred activity. Computerized scoring yields comprehensive report with easy to understand profiles, as well as definitions for the Basic Interest Scales, and General Occupational Themes.

**Jackson Vocational Interest Survey (JVIS)****Douglas N. Jackson**

The JVIS consists of 289 pairs of statements describing professional job related activities. The forced-choice format requires an individual to choose between two equally popular interests. The JVIS assesses work roles (for example, engineering) and work environment preferences (for example, job stability), as well as measuring potential academic satisfaction. Detailed reports provide links, resources, and industry contacts to help individuals learn more about their highest ranked careers and university majors.

## Self-Directed Search® Form E- 4th Ed. (SDS® E)

John L. Holland

Revised and updated based on Form E user feedback, this version more closely reflects the interests of individuals at lower educational levels. The revised Jobs Finder represents current industrial and occupational trends and focuses on job requirements that more closely match the vocational aspirations of individuals with limited reading ability. The Jobs Finder lists over 860 jobs, including some requiring post-secondary training, with prompts and cues to encourage full vocational exploration. These jobs have been updated to reflect the 1996 edition of the Dictionary of Holland Occupational Codes (DHOC).

## Standard Self-Directed Search (SDS)

John L. Holland, PhD, and Melissa A. Messer, MHS

The StandardSDS is a career assessment and exploration tool that uses John Holland's RIASEC theory to classify individuals according to six basic types: Realistic, Investigative, Artistic, Social, Enterprising, and Conventional. The theory is based on the idea that if your personality type matches your work environment type, you are more likely to find job fulfillment and career satisfaction.

The StandardSDS asks questions about aspirations, activities, competencies, and level of interest in a variety of occupations and produces a three-letter Summary Code that helps individuals find educational and occupational matches to their personality type.

## Career Attitudes and Strategies Inventory (CASI)

John L. Holland and Gary D. Gottfredson

Counselors describe the CASI as a career checkup that surveys beliefs, events, and forces affecting an individual's career as well as a way to identify influences or problems requiring further discussion and exploration. In individual or group settings, the instrument helps to identify and clarify career problems and stimulates constructive discussion of these areas. Potential uses include a general assessment of a company's work environment, sources of worker dissatisfaction, degree of interpersonal abuse, etc. The CASI provides a comprehensive inventory of a person's current work situation that includes common attitudes and beliefs as well as strategies for coping with job, family, coworkers, and supervisors.

**Career Thoughts Inventory (CTI)**

**James P. Sampson, Gary W. Peterson, Janet G. Lenz, Robert C. Reardon and Denise E. Saunders**

The CTI is a self-administered and objectively scored assessment designed to improve the effectiveness of career counseling and guidance for adults, college students, and high school students. The CTI can be used to identify an individual who is likely to need counseling assistance; to identify the nature of an individual's career problems; and to help an individual identify, challenge, and alter negative career thoughts that interfere with effective career decision making. Clients complete the CTI Test Booklet, responding to each of the 48 items using a 4-point rating scale (Strongly Disagree to Strongly Agree). The CTI yields a CTI Total score (a single global indicator of negative thinking in career problem solving and decision making) as well as scores on 3 construct scales: Decision Making Confusion, Commitment Anxiety and External Conflict.

**Career Decision Scale (CDS)**

**Samuel H. Osipow**

The CDS provides an estimate of career indecision and its antecedents, as well as an outcome measure to determine the effects of relevant interventions. The 4-page Test Booklet contains all items and ratings, as well as space for scoring and recording. Students indicate on a scale of 1 to 4 how closely each statement describes their own thinking process regarding their educational and occupational plans. The CDS is composed of 19 items. The CDS Manual provides normative data for high school and college students, as well as limited norms for adult college women and continuing education students.

**Reading-Free Vocational Interest Inventory, Third Edition (RFVII-3)**

**Katherine O. Synatschk and Ralph L. Becker**

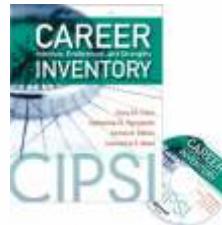

The Reading-Free Vocational Interest Inventory-Third Edition (RFVII-3) is a nonverbal measure of vocational interests for users from Grade 5 through adult. It uses illustrations of individuals engaged in different occupations to measure the vocational likes and dislikes of students and adults who have intellectual disabilities or learning disabilities, are struggling readers, or anyone who prefers a pictorial display. No reading or writing is required.

## Career Interests, Preferences, and Strengths Inventory (CIPSI) Online - 25 Users + 25 Print Inventory Booklets

Inventory Gary M. Clark

The Career Interests, Preferences, and Strengths Inventory (CIPSI) is an excellent informal career exploration tool for students from 5th grade through high school. Students identify their personal interests, strengths, general preferences, and favored careers. The CIPSI Manual helps teachers and counselors guide individual students and groups of students through the process of exploring, investigating, and planning for careers. After completion of the inventory, students are given personalized, in-depth reports linking their results to career descriptions and information for further exploration. Group and classroom reports are available also. Reproducible career exploration and planning lessons are available in the manual.

### Key features of the CIPSI include:

- Examines the student's interests, preferences, and strengths in one set of surveys
- Encourages early exploration for students in middle school
- Allows high school students to use this information to develop a career choice action plan
- Quick and easy to use
- Can be completed in 20 minutes
- Can be given to groups on paper or to individuals on the computer
- Easy data entry from printed versions for computer reports
- The program will run on Windows 2000 and XP and Macintosh OS X 10.3.9 or higher.

## Agreeableness Measuring Scale

Dr. Rishi Pal and Nidhi Jain

The scale is designed to measure the degree of agreeableness as well as most of its major sub-trait which employees exhibit and express during various interactions and situations of their personal and work life. This scale will prove more suitable for the employees of supervisory level and above. This scale contains sixty (60) items with 30 positive and 30 negative items and each sub-trait includes 10 items. Each item ranked on the five point Likert scale on five categories. It has six dimensions:

Trust, Morality, Altruism, Cooperation, Modesty, Sympathy

## Job Stress Survey (JSS)

Charles D. Spielberger and Peter R. Vagg

Occupational stress affects productivity, absenteeism, accidents, worker turnover, and stress-related health problems. Identifying major sources of stress in a workplace can help to identify changes in the work environment and other interventions that will reduce stress and increase productivity. The JSS was developed to assess generic sources of work-related stress experienced by men and women in a wide variety of business, industrial, and educational settings. The JSS focuses on common work situations that often result in psychological strain.

## Occupational Stress Inventory - Revised (OSI-R)

Samuel H. Osipow

The OSI-R is a concise measure of three domains of occupational adjustment: occupational stress, psychological strain, and coping resources. The original research edition of the OSI was designed to (a) develop an integrated theoretical model to link these three important dimensions, and (b) develop generic occupational stress measures that would apply across different occupational levels and environments. This revision provides normative data for both gender and specific occupational categories (i.e., executive, professional, technical, administrative support, public service/safety, and agricultural/production/laborer).

## Employee Assistance Program Inventory (EAPI)

William D. Anton and James R. Reed

The EAPI is the first clinical instrument specifically targeted for use in EAPs, as well as by all mental health professionals who provide counseling and other services to working adults. It facilitates rapid identification of common psychological problems and may be used to guide appropriate referrals or short-term interventions. This valid and reliable instrument screens for major problem areas experienced by EAP clients and can be used most effectively as part of the intake process to enhance understanding of presenting symptoms. The EAPI assesses problems in 10 areas: Anxiety, External Stressors, Depression, Interpersonal Conflict, Self-Esteem Problems, Work Adjustment, Marital Problems, Problem Minimization, Family Problems and Effects of Substance Abuse.

## Organizational Citizenship Behavior Scale (OCBS)

Arti Bakhshi and Kuldeep Kumar

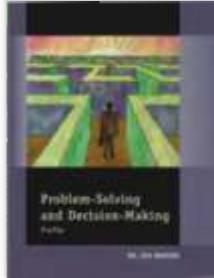

The Organizational Citizenship Behavior Scale (OCBS) is a very useful tool to assess organizational citizenship behavior of the employees working in almost every type of Indian organization. With the careful study of individual's score on each item, the attitude of the employee towards pro-social behavior in the organization can be found out and depending on these results, suitable tasks can be assigned to the employees that best match their attitude thus leading to their higher job satisfaction and in turn affecting the job performance of the employee. The scale is brief, reliable and valid and all statements are clear, distinct and concept based.

## Problem-Solving & Decision-Making Profile

Jon Warner

This self scoring, 84 item assessment determines an individuals self reported level of competence in 7 problem solving competencies including risk assessment, data gathering and processing, weighing alternatives, selecting tools, perception and judgment, lateral conceptualization and critical thinking. Respondents who report frequent use of 84 problem solving and decision making behaviors score high on the assessment. By focusing on the individual behaviors where scores are lower, individuals can improve their problem solving and decision making approaches. The self scoring question booklet includes a spider diagram exercise that visually presents strengths and weaknesses. There is a Personal Action Plan template for identifying competency improvement goals and the personal steps to achieving those goals. The Facilitators Guide for this assessment includes an extensive collection of coaching tips to assist in the development of each questionnaire behavior as well as guidance on leading an interpretive workshop using this questionnaire.

## Psychological Type Indicator

Alexander Hiam

The Psychological Type Indicator (PTI) is a carefully crafted personality measure that is designed to give individuals guidance about their psychological (Jungian) type using the sixteen types (INTJ, ENTP, etc.) first presented by Carl Jung. The focus of the PTI is on providing individuals themselves, their managers and those who train them, with an understanding of personality and its effect on performance both inside and beyond the workplace. The PTI has its foundations in the theory of Carl Jung as a measure of personality type, but goes further by differentiating between personality type, as described by Jung, and behavior, as described by Kurt Lewin's Field Theory. Lewin postulated that behavior is best understood by understanding the influence of a person's environment on their innate and stable personality. The unique design of the PTI scoring system provides the key to seeing personality type in the context of how personality can be influenced by environment. Conditions that fall outside our natural preference boundaries will be less preferred and, consequently, are more likely to be avoided.

### PRODUCT OVERVIEW

Product Code: 52-1111-KT

₹: 22,994.00

Age Range: Adult

Administration: Individual

Language: English

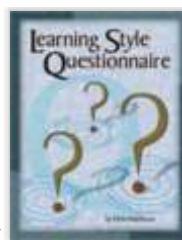

### Features

- Powerful, innovative scoring system that highlights the range within which individuals are likely to be comfortable adopting different behavioral styles to cope with changes in their environment and the different life pressures they might face from time-to-time.
- Simple to use integrated Answer Sheet and Scoring Key with built-in Profile Chart.

## Learning Style Questionnaire

Chris Hutcheson

The Learning Style Questionnaire provides the concepts and insight into adult learning that every trainer needs. Identify your employees' strengths and weaknesses in the ways in which they learn. Capitalize on their learning strengths and help them improve in their areas of weakness. The Learning Style Questionnaire measures a participant's preferred method of learning in four different learning styles: participating, reflecting, structuring, and experimenting. Each of the twenty questions asked in the questionnaire has four possible answers. Each of the answers represents one of four possible learning styles. By ranking the four possible answers according to his or her degree of preference, participants identify their preferred learning style. This also represents the particular stage (or stages) of the experiential learning cycle in which they prefer to operate. An understanding of the different learning styles helps participants select the approach for specific learning situations that will yield the best results. With quick and easy administration (under 45 minutes), The Learning Style Questionnaire is an essential resource for trainers and managers involved in adult learning. Trust, Morality, Altruism, Cooperation, Modesty, Sympathy

## Leadership Effectiveness Profile Online

**Jon Warner**

This assessment is a 96 item, self scoring assessment of these 8 leadership competencies: Emotional Intelligence, Contextual Thinking, Directional Clarity, Creative Assimilation/People Enablement, Reciprocal Communications, Change Orchestration, Drive/Persistence. Each leadership competency uses ratings of 12 behaviors to develop a dimension score. The booklet provides generalized conclusions for high scores in a competency. At the same time participants are encouraged to focus on those specific behaviors they rated lowest. Suggested actions are provided for low scores in each competency. Participants plot their competency scores on a overall profile chart that visually displays their leadership effectiveness strengths and development needs. There is a personal action plan worksheet for individuals to record their development needs and outline development actions.

## Conflict Style Inventory

**Marshall Sashkin**

This instrument assesses individual approaches to conflict and shows how to make conflict a constructive, rather than destructive, force in your workplace. This revised edition includes new scales to measure team's approach to conflict as well as each individual's approach. The instrument consists of 10 vignettes which describe realistic workplace conflicts.. The results give respondents an accurate assessment and understanding of their own natural approaches to dealing with conflict, and provide a starting point for developing the skills necessary to begin managing conflict constructively.

## Managing by Motivation

**Louie V. Larimer**

This instrument is based on the classic motivation theories of Maslow and Herzberg. These identify motivating factors in terms of an individual security, social, self-esteem, and self-actualization needs. Managers will learn to understand their own motivations, and more importantly to take into account employees motivations as they relate to performance and organizational change issues. The 20-item questionnaire can be completed and self-scored in 15 minutes, and includes brief and insightful interpretive material.

## Assertiveness Style Profile

Jon Warner

The Assertiveness Profile reveals an individual's use of four distinct assertiveness styles. Full interpretation and explanatory notes are also included in the assessment booklet for personal action planning and improvement. The questionnaire is 32 items and can be completed and self scored in less than 15 minutes.

## Work Values Inventory (WVI)

Melissa A. Messer, MHS, and Jennifer A. Greene, MSPH

The WVI is a self-administered, self-scored, and self-interpreted measure of six workplace values. It is a career exploration and job selection tool that helps career counselors and human resource professionals.

### Features and benefits

Helps career counselors assist clients in learning more about themselves to find a job that is a good fit for their work values.

Assists human resource personnel in screening potential job candidates to find the right fit for a particular position and a good fit within the organizational culture.

Based on and tied to the Department of Labor's Occupational Information Network (O\*NET).

Captures the O\*NET's six identified work values: Achievement, Independence, Support, Relationships, Working Conditions, and Recognition.

The WVI Occupations Index lists more than 1,300 jobs according to work value and required education level.

## Working Styles Assessment (WSA)

Melissa A. Messer, MHS, and Heather Ureksoy, PhD

The WSA assesses a person's work-related personality traits—the traits that are related to effective job performance.

### Features and benefits

The only workplace personality assessment that uses the current Occupational Information Network (O\*NET) terminology. The personality traits measured by the WSA can be compared to the traits associated with hundreds of current occupations listed in the O\*NET database.

Measures 18 constructs, including all 16 working styles defined by the O\*NET. These constructs are grouped in five general categories: drive, interpersonal skill, adjustment, responsibility, and problem-solving skill.

# Five-Factor Personality Inventory-Children (FFPI-C)

**Authors: Ronnie L. McGhee, David J. Ehrler & Joseph A. Buckhalt**

Product Code: 16-2276-KT

Age Range: 9 - 18.11 years

Administration: Self, Individual or Group

Publication Year: 2018

Language: English

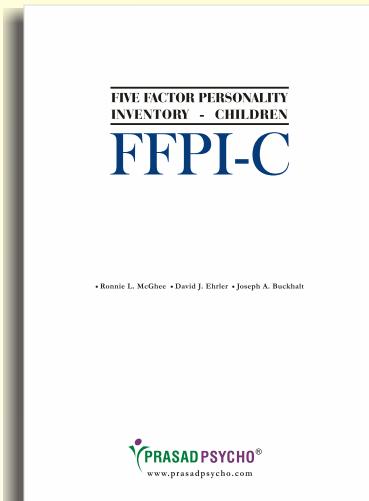

Price: ₹ 13,990.00

## Purpose:

Measure personality traits and dispositions in children and adolescents.

The Five-Factor Personality Inventory-Children (FFPI-C) is based upon the Five Factor Model. It is a self-report inventory designed to measure personality traits and dispositions in children and adolescents, as well as adults.

## Description:

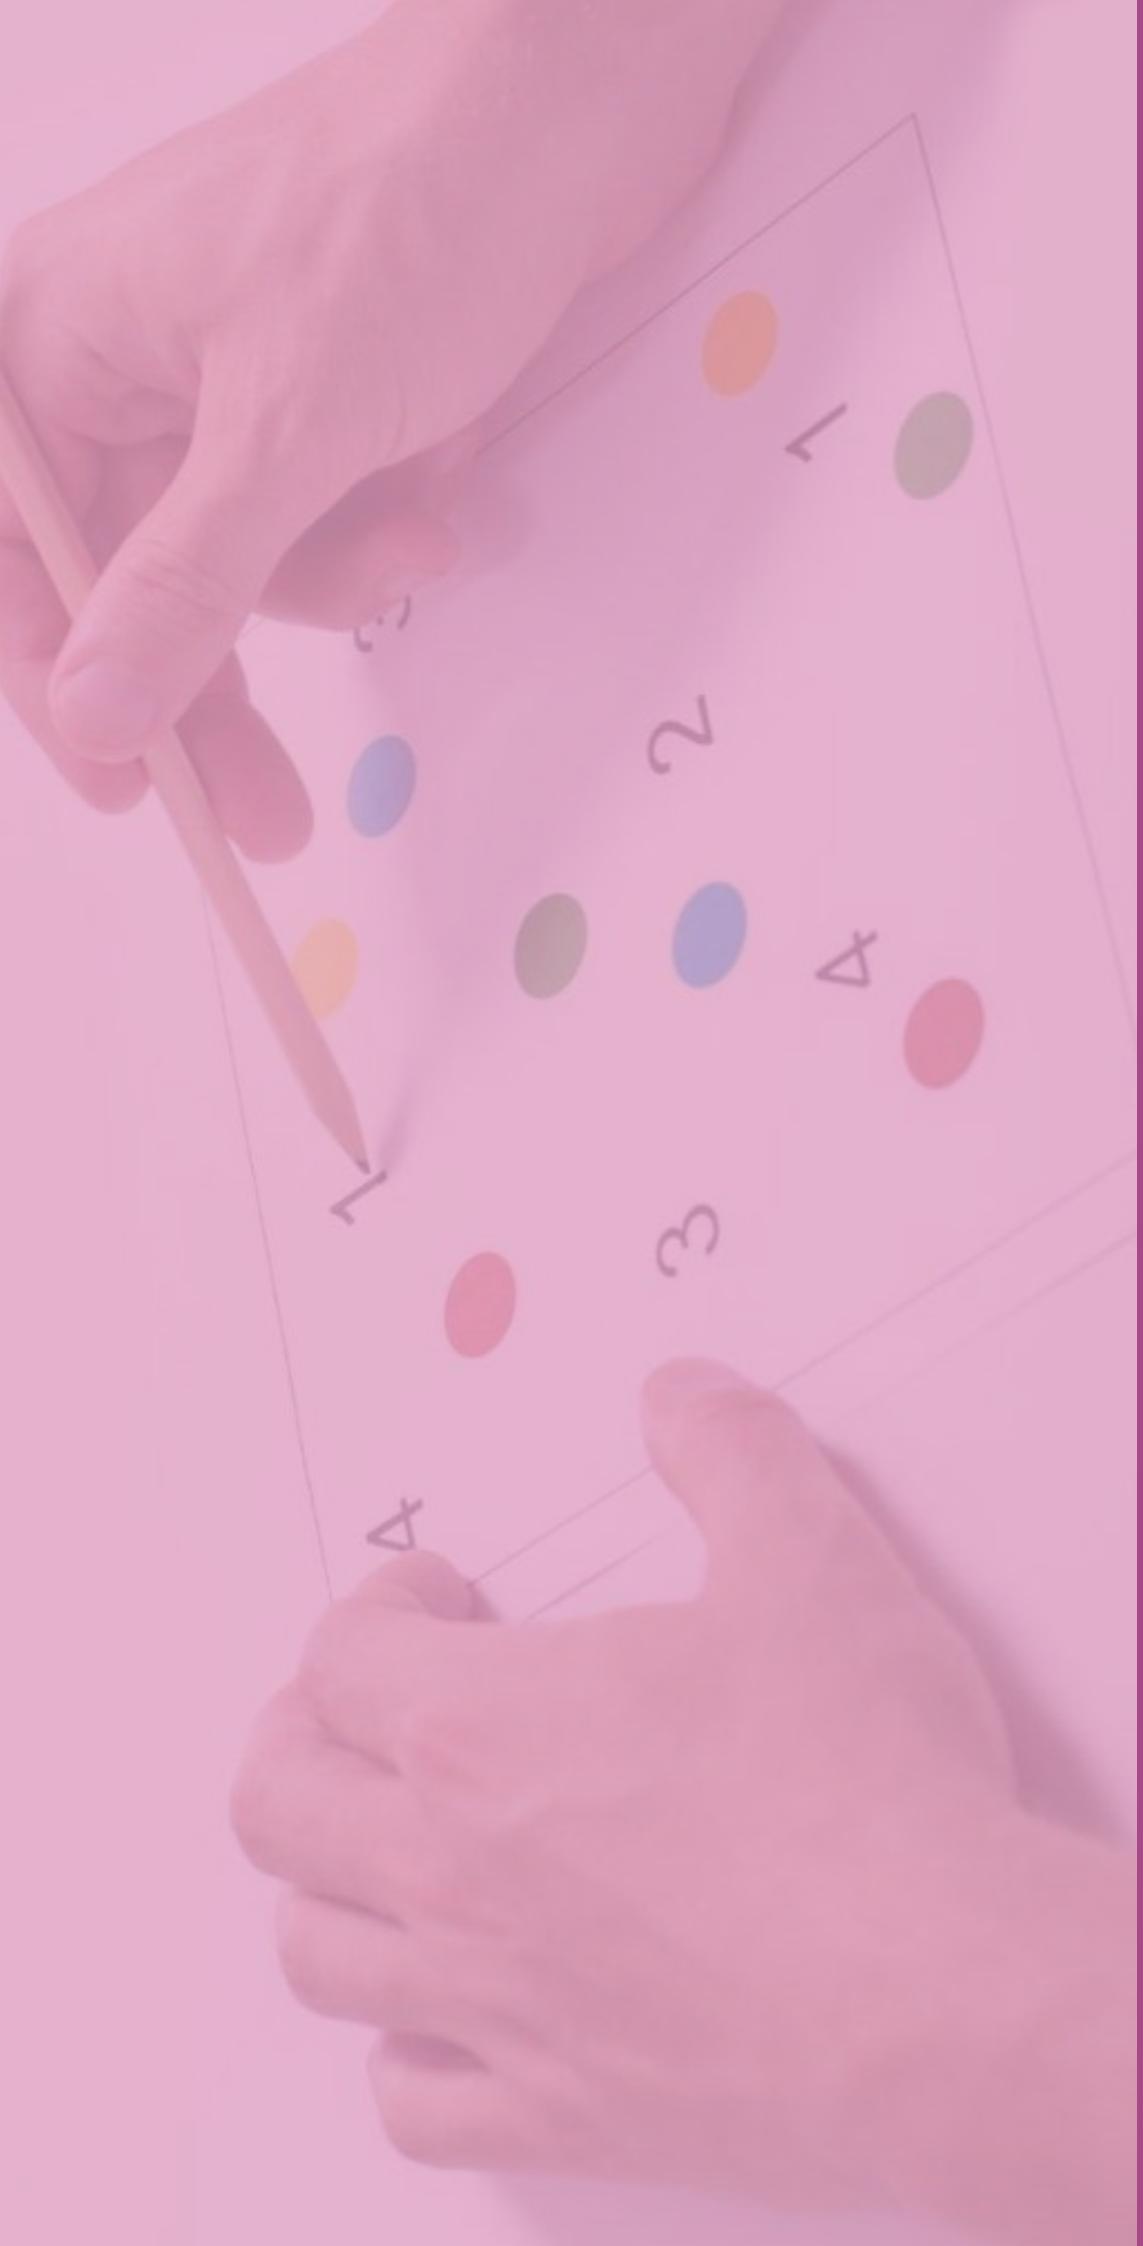

The test contains 75 items, each of which has two opposing anchor statements. Respondents are to choose the statement that best represents their opinion and then make a qualitative decision on the degree of support for their choice by filing in one of five circles.

It is based on a modern five-factor personality theory, which concludes that five broad factors account for the majority of variance in the personality descriptors:

1. **Agreeableness** — Subfacets include Trust, Straightforwardness, Altruism, Compliance, Modesty and Tendermindedness.
2. **Extraversion** — Subfacets include Warmth, Gregariousness, Assertiveness, Activity, Excitement Seeking, and Positive Emotions.
3. **Openness to Experience** — Subfacets include Fantasy, Aesthetics, Feelings, Actions, Ideas, and Values.
4. **Conscientiousness** — Subfacets include Competence, Order, Dutifulness, Achievement Striving, Self-Discipline, Deliberation.
5. **Emotional Regulation** — Subfacets include Anxiety, Angry Hostility, Depression, Self-consciousness, Impulsiveness and Vulnerability.

## Benefit:

The FFPI-C is an efficient method of identifying, evaluating, and describing social adjustment and academic performance difficulties in children and adolescents.

# Neuropsychological Assessment

## PRODUCT OVERVIEW

Product Code: 17-1262-KT

₹: 59,510.00

Age Range: 5 - 59 yrs

Time Taken: Core Battery 30 minutes; Core plus Supplementary 60 minutes

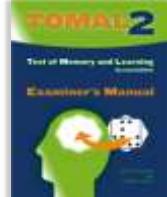

Administration: Individual

Language: English

## Test of Memory and Learning- 2nd Ed. (TOMAL-2)

Cecil R. Reynolds and Judith K. Voress

The TOMAL-2 includes 8 core subtests, 6 supplementary subtests, and 2 delayed recall tasks that evaluate general and specific memory functions; features composite memory scores for Verbal Memory, Nonverbal Memory, and a Composite Memory Index; has supplementary composite scores that include a Verbal Delayed Recall Index, Learning Index, Attention and Concentration Index, Sequential Memory Index, Free Recall Index, and an Associate Recall Index; includes highly interpretable and relevant scores, scaled to a familiar metric. TOMAL-2 provides the most comprehensive coverage of memory assessment currently available in a standardized battery.

## Boston Diagnostic Aphasia Examination (BDAE-3)

Harold Goodglass, Edith Kaplan and Barbara Barresi

This new spectrum of tools helps you identify and distinguish among disorders of language function and neurologically recognized aphasic syndromes. NEW in this Edition: a short form of The BDAE-3 The short form is perfect when you want rapid access to Diagnostic classification and quantitative assessment. The Text: The Assessment of Aphasia and Related Disorders. At The center of this comprehensive array of resources, this book offers complete coverage of: The nature of Aphasia, its definition and characteristics. The normative basis for The BDAE scoring system specific explanation of how to administer. The exam how to interpret The Test Score profiles and recognize aphasic syndromes and their origins. A severity rating scale that measures your clients communicative ability testing of visuospatial and quantitative skills after brain injury.

## PRODUCT OVERVIEW

## Cognitive Linguistic Quick Test-Plus (CLQT™+)

Nancy Helm-Estabrooks, ScD

Cognitive Linguistic Quick Test (CLQT) to assist you in quickly assessing strengths and weaknesses in five cognitive domains (Attention, Memory, Executive Functions, Language, and Visuospatial Skills). Now, the CLQT+ adds an important element—an optional new administration path for people with aphasia. Including one new semantic comprehension task and scoring for several elements within the current tasks, the CLQT+ gives you:

More flexibility in your administration

Clearer interpretation for people with aphasia

The same foundation for a quick, reliable cognitive assessment at table or bedside

An effective tool for English- or Spanish-speaking adults with known or suspected neurological impairment as a result of stroke, traumatic brain injury, or dementia.

## PRODUCT OVERVIEW

Product Code: 20-1085-KT

₹: 37,065.00

Age Range: 7 - 80 yrs

Time Taken: 45 - 50 minutes

Administration: Individual

Language: English

## Continuous Visual Memory Test (CVMT)

Donald E. Trahan and Glenn J. Larrabee

The CVMT uses complex, ambiguous designs and a recognition format to measure visual learning and memory. Studies suggest that these features may increase task sensitivity and reduce the confounding influence of verbal encoding strategies. This format also eliminates the motor responses required by drawing tasks and restricts the verbal labeling required by tests that use simplistic geometric figures and common objects. The clinical sensitivity of the CVMT has been demonstrated in patients with unilateral right hemisphere CVA, individuals with Alzheimer's disease, as well as patients who have suffered severe head trauma.

## Short Parallel Assessment of Neuropsychological Status (SPANS-X)

Dr. G. Burgess

The Short Parallel Assessments of Neuropsychological Status (or 'SPANS') is a short battery of cognitive tasks that produce seven reliable index scores including Orientation, Attention/Concentration, Language, Memory/Learning, Visuo-Motor Performance, Efficiency and Cognitive Flexibility. The assessment includes two alternate versions, SPANS A and SPANS B, for reliable retest while minimising practice effects.

## Brief Test of Attention™ (BTA™)

David Schretlen

The BTA is an auditory perception task that measures divided attention in the verbal-linguistic system. It provides a rapid, bedside assessment of attentional impairment among nonaphasic hearing adults, including those with visual and motor impairments that preclude tests which require visual scanning or manual dexterity. The BTA consists of two parallel forms presented via audiocassette. On Form N (Numbers), a voice reads ten lists of letters and numbers that increase in length from 4-18 elements. The respondent's task is to disregard the letters presented and count how many numbers were read aloud. Form L (Letters) consists of the same ten lists, but the respondent must disregard the numbers and count how many letters were read aloud. The number of correctly monitored lists is summed across both forms, with raw scores ranging from 0-20. Test materials include the Professional Manual, the Stimulus Audiotape, and the Scoring Form.

### PRODUCT OVERVIEW

Product Code: 20-1040-KT

## Children 's Auditory Verbal Learning Test- 2nd Ed. (CAVLT -2)

Jack L. Talley

The CAVLT-2 is composed of one recognition and two free-recall memory word lists designed specifically for young people. The first free-recall word list is presented for five trials. The second free-recall test is presented as an interference list, after which the individual is asked to recall words from the first list. Following a brief delay, retention is assessed by a second recall test of the words from the first list. Finally, words from a new recognition list are presented; the individual must decide whether each word was included in the original free-recall word list.

### PRODUCT OVERVIEW

## California Verbal Learning Test Third Edition (CVLT3)

Dean C. Delis, PhD Joel H. Kramer Edith Kaplan Beth A. Ober

California Verbal Learning Test® Third Edition is the most comprehensive assessment of verbal learning and memory for older adolescents and adults. In the CVLT®3, an examinee listens to series of words and is then asked to recall the terms and the category to which they belong. Assess individuals who have been diagnosed with traumatic brain injury (TBI), dementia, schizophrenia, ADHD, or neurological disorders.

Test the degree to which a person can return to work, perform complex activities of daily living, and live independently.

Evaluate insufficient effort or malingering to reduce false results.

## Children's Color Trails Test (CCTT)

Antolin M. Llorente, Jane Williams, Paul Satz and Louis F. D'Elia

The Children's Color Trails Test (CCTT) was developed to meet the increasing need for a children's instrument to assess sustained attention, sequencing, and other executive functions while reducing reliance on language and diminishing the effects of cultural bias and parental verbal report. The CCTT retains many similarities to the original children's version of the Trail Making Test (TMT), but substitutes the use of color for the use of letters from the English alphabet, thereby increasing the suitability of the test within cross-cultural contexts and with other special needs populations. The CCTT is firmly rooted in child development and maturational theory, developmental neuropsychology, and child neurology.

## Child and Adolescent Memory Profile (ChAMP)

Elisabeth M. S. Sherman, PhD, and Brian L. Brooks, PhD

The ChAMP is an easy-to-use, examiner-administered test of memory for use with children, adolescents, and young adults that allows both in-depth memory evaluation and memory screening.

### Features and benefits

- Simple to use yet comprehensive: Covers core verbal, visual, immediate, and delayed memory domains with only four subtests.
- Easy to administer: A single form contains all administration instructions. One stimulus book is the only other component needed for administration.
- Common, real-life scenarios and colorful, developmentally appropriate stimuli are engaging and relevant to young examinees.
- Administration time is approximately 35 minutes, with no additional delay time required; the Screening Index takes about 10 minutes.
- No motor response required.
- Focused on learning—each subtest has multiple learning trials.
- A built-in validity indicator alerts the clinician to potentially invalid scores.
- Includes discrepancy scores, reliable change scores, a base-rate analysis of low scores, and a strengths and weaknesses analysis.
- Provides case examples and intervention recommendations for both home and school.

## Dementia Rating Scale - 2nd Ed. (DRS-2)

Professional Manual by Paul J. Jurica, Christopher L. Leitten and Steven Mattis

Research conducted after the publication of the original Dementia Rating Scale (DRS) showed that both age and education contribute significantly to DRS subscale and Total Scores. This finding, along with several other factors, provided the impetus for the development of the DRS-2. The DRS-2 measures cognitive function at lower ability levels where some other evaluation instruments are limited by floor effects. The DRS-2 also can be used to track changes in cognitive status over time. By design, the DRS-2 measures deficits in a large range of higher cortical functions and differentiates deficits of varying severity levels.

## Developmental Scoring System for the Rey-Osterrieth Complex figure (DSS-ROCF)

Jane Holmes Bernstein and Deborah Waber

The DSS-ROCF allows the examiner to objectively evaluate ROCF performance within a developmental context and to determine the age-appropriateness of the child's Copy and Recall productions. The DSS-ROCF measures not only the child's ability to accurately reproduce the figure, but also the child's qualitative, organizational, and stylistic approaches to the figure. Clinical experience has shown that children's responses to the ROCF often predict their responses in comparable situations where novel, complex material is presented. The DSS-ROCF measures four parameters of ROCF performance: Organization, Style, Accuracy, and Errors.

## Digit Vigilance Test (DVT)

Ronald F. Lewis

Sensitive to subtle changes in neuropsychological status, but relatively insensitive to the effect of repeated administrations, the DVT is a simple task designed to measure vigilance during rapid visual tracking and accurate selection of target stimuli. It appears to isolate alertness and vigilance while placing minimal demands on two other components of attention: selectivity and capacity. Administration and scoring can be accomplished by individuals with no formal training under the supervision of a qualified psychologist. Interpretation within the context of a comprehensive neuropsychological evaluation requires training in clinical psychology or neuropsychology.

## Mini-Mental® State Examination- 2nd Ed.™ (MMSE®-2™) Standard Version Kit

Marshal F. Folstein, Susan E. Folstein, Travis White and Melissa A. Messer

MMSE-2 is a new standard version that is equivalent to the original MMSE. It has 3 new brief and expanded forms. MMSE-2 retains the original's clinical utility and efficiency while expanding its usefulness in populations with milder forms of cognitive impairment, including subcortical dementia. One can select the version that best fits one's requirements as well as patients' needs. Depending on the version chosen, administration takes between 5 and 20 minutes. Equivalent, alternate forms (Blue and Red) of each MMSE-2 version have been developed to decrease the possibility of practice effects that can occur over serial examinations. Items have obvious relationships to functional ability in daily life. Finally, the Pocket Norms Guide has been updated to include norms for all three versions of the MMSE-2 by age and education level and includes reliable change scores to facilitate serial testing with any of the MMSE-2 versions.

## Wisconsin Card Sorting Test®-64 (WCST-64™) Card Version

Robert K. Heaton, PhD, and PAR Staff

The WCST-64 uses only the first 64 WCST cards, shortening the administration time for most individuals while retaining the task requirements of the standard version. The WCST-64 also eliminates variability in the number of cards administered, facilitating straightforward comparisons of test-retest stability and comparisons of individual test results with normative and validity data.

## Wisconsin Card Sorting Test® (WCST)

David A. Grant and Esta A. Berg, Professional Manual by Robert K. Heaton, Gordon J. Chelune, Jack L. Talley, Gary G. Kay and Glenn Curtiss

Although the WCST is used primarily to assess perseveration and abstract thinking, it has gained increasing popularity as a neuropsychological instrument. It has been considered a measure of executive function because of its reported sensitivity to frontal lobe dysfunction. As such, the WCST allows the clinician to assess the following "frontal" lobe functions: strategic planning, organized searching, utilizing environmental feedback to shift cognitive sets, directing behavior toward achieving a goal, and modulating impulsive responding.

## Modified Wisconsin Card Sorting Test® (M-WCST™)

David J. Schretlen

The M-WCST is a modification of the original Wisconsin Card Sorting Test that eliminates all cards from the original 128-card deck that share more than one attribute with a stimulus card (e.g., each response card whose stimuli match a stimulus card in both color and form was eliminated). This results in a 48-card deck, which is used along with four stimulus cards. This and other modifications enable impaired and elderly adults to more easily understand the directions, reducing frustration. Age-, sex-, and education-based norms are provided in the manual. Four scores are calculated for the M-WCST: Number of Categories Correct, Number of Perseverative Errors, Number of Total Errors, and Percent of Perseverative Errors. In addition, an Executive Function Composite score can be calculated.

## d2 Test of Attention

Rolf Brickenkamp and Eric A. Zillmer

This general performance test measures the speed and accuracy of differentiating visual stimuli (detail discrimination), allowing you to evaluate an individual's attentiveness and concentration.

The d2 Test of Attention is a highly reliable, hard-to-falsify concentration measure that includes an evaluation form with a diagnosis diagram to make analysis and interpretation easy. It is useful in occupational counseling; aptitude evaluation; educational, clinical, and industrial psychology; and psychopharmacology.

## Stroop Neuropsychological Screening Test (SNST)

Max R. Trencerry, Bruce Crosson, James DeBoe and William R. Leber

This standardized version of the Stroop consists of two parts. In the Color Task, the individual reads aloud a list of 112 color names in which no name is printed in its matching color. In the Color-Word Task, the individual names the color of ink in which the color names are printed. The SNST may be administered and scored by individuals with limited training. Interpretation of the resulting Color and Color-Word scores requires professional training in psychology, psychiatry, or educational testing. A stopwatch is required to administer each 2-minute test.

## Memory Validity Profile (MVP)

Elisabeth M. S. Sherman, PhD, and Brian L. Brooks, PhD

The MVP is a performance validity test (PVT) for children, adolescents, and young adults that covers visual and verbal domains in just 5-7 minutes. Can be administered to youth with motor impairments and visual impairments as well as those with developmental or acquired cognitive, academic, or behavioral concerns. Consists of two subtests—Visual and Verbal. Each subtest is divided into two brief item sets, with the second set perceived as progressively more challenging than the first.

MVP Professional Manual with Fast Guide, 25 MVP Record Forms, and MVP Stimulus Book

## Quick Neurological Screening Test III - Third Revised Ed. (QNST-III)

Margaret Mutti, Harold M. Sterling, N. Martin and Norma V. Spalding

Here is a rapid and reliable way to identify possible neurological interference in learning. Individually administered to children in grades K-12, the QNST-II assesses 15 areas of neurological integration. This revision includes the latest research findings concerning the soft neurological signs that may accompany learning disabilities. The test alerts special education professionals to physical problems (in dexterity, visual tracking, spatial orientation, tactile perceptual abilities, and motor skills) that often co-occur with learning disabilities.

## Rey Auditory Verbal Learning Test A Handbook

Michael Schmidt, ABPP, ABPN

The standard RAVLT format starts with a list of 15 words, which an examiner reads aloud at the rate of one per second. The patient's task is to repeat all the words he or she can remember, in any order. This procedure is carried out a total of five times. Then the examiner presents a second list of 15 words, allowing the patient only one attempt at recall. Immediately following this, the patient is asked to remember as many words as possible from the first list. The RAVLT has proven useful in evaluating verbal learning and memory, including proactive inhibition, retroactive inhibition, retention, encoding versus retrieval, and subjective organization.

## Shipley-2

Walter C. Shipley

This popular measure of intellectual ability and impairment has been used with millions of individuals 14 years of age and older. The Scale is composed of two brief subtests: (1) a 40-item Vocabulary Test that requires the respondent to choose which of four listed words "means the same or nearly the same" as a specified target word; and (2) a 20-item Abstract Thinking Test, which requires the respondent to fill in numbers or letters that logically complete a given sequence. The Shipley measures the discrepancy between vocabulary and abstract concept formation, providing a useful measure of cognitive impairment. In addition, it is widely used as a convenient intelligence measure because it is self-administering and brief and can be individually or group administered.

## Bender Visual-Motor Gestalt Test - 2nd Ed. (BGT - II)

Gary G. Brannigan and Scott L. Decker

The Bender Visual-Motor Gestalt Test, Second Edition (Bender-Gestalt II) is a brief assessment of visual-motor integration that may provide interpretive information about an individual's development and neuropsychological functioning. The Bender-Gestalt II is ideal for use as a first measure in an extended psychological battery. With its simple design and administration, the Bender-Gestalt II is an effective and non-threatening warm-up to more challenging assessments. It is also a reliable tool to assess Visual-Motor development and may be used as a screener for neuropsychological impairment.

## Koppitz Developmental Scoring System for the Bender Gestalt Test- 2nd Ed. (KOPPITZ-2)

Cecil R. Reynolds

The new Koppitz-2 has been expanded to cover a broad age range with additional designs and a revised scoring system to add reliability at all levels. For the first time, the Koppitz Developmental Scoring System has been normed on a nationally stratified, census matched sample of children and adults from throughout the United States. The new Koppitz-2 is ideal for use by psychologists, educational diagnosticians, licensed professional counselors, OTs, and others with proper training in the use of psychologically based tests of visual-motor integration. It is a highly reliable, valid measure of visual-motor integration skills that applies the developmental approach to scoring made so popular by its originator, Dr. Elizabeth Munsterberg Koppitz. The new Koppitz-2 is true to Koppitz' original conceptualization but has been redeveloped to meet current psychometric standards. The age range has been extended to allow the evaluation of special education students through age 21 and to assist in the evaluation of the visual-motor integration deficits of the growing population of seniors. For older children and adults, both 2 and 3 dimensional drawings are now required that reveal subtle deficits in visual-motor integration processes.

## Boston Qualitative Scoring System™ for the Rey-Osterrieth Complex Figure (BQSS™)

Robert A. Stern, Debbie J. Javorsky, Elizabeth A. Singer, Naomi G. Singer Harris

The BQSS is a comprehensive scoring system that provides a highly reliable and quantifiable approach to rating the qualitative features of Rey-Osterrieth Complex Figure (ROCF) productions. These qualitative features of the ROCF are based on three sets of ROCF elements--Configural Elements, Clusters, and Details. In addition to the 17 Qualitative scores for the Copy, Immediate Recall, and Delayed Recall Conditions, there are six BQSS Summary scores derived from combinations of the Qualitative scores that provide a more quantitative evaluation of the respondent's overall ROCF performance.

## AIIMS Neuropsychological Battery Adults (Hindi)

Surya Gupta

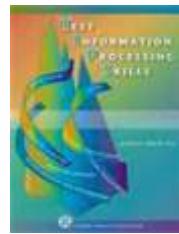

Demonstrates brain - behavior relationship. Useful in detection, lateralisation and localisation of discreet brain lesions that are typically seen in neurological setting. The scales included are: motor, visual, tactile, receptive speech, expressive speech, reading scale, writing scale, arithmetic, memory, intellectual process, pathognic scale, Left hemisphere, right hemisphere, total score scale.

## Test of Information Processing Skills (TIPS)

Raymond E. Webster, PhD

Here is a quick, reliable way to assess information processing skills in children and adults. Performance on the TIPS reflects executive functioning, working memory, auditory and visual processing, and ability to learn, retain, organize, and use new information. Appropriate for people between the ages of 5 and 90, the TIPS is useful in evaluating learning disabilities, brain injuries, and other cognitive difficulties. Specifically, the TIPS tells you how individuals process information that's seen or heard; how much they retain (immediately and after a delay); how they retain it (in sequence or out of order); and how interference affects recall. It also provides an estimate of semantic fluency. Individually administered in just 20 to 25 minutes, the TIPS is composed of the following subtests: Visual and Auditory Modality Letter strings are presented visually and orally, and the examinee is asked to recall the letters immediately, then after a counting task, and again after a sentence repetition task. Delayed Recall. The examinee is asked to recall animals or fruits from the sentence repetition task. Semantic Fluency. The examinee must generate word lists over one-minute spans, first orally and then in writing. The test provides norm-referenced standard scores and percentile ranks for visual and auditory memory, under three recall conditions. Differences between sequential and non sequential retention—often seen in students with learning difficulties—are also noted. In addition, error analyses (Proactive Inhibition and Auditory Intrusion) document the extent to which new information is lost or its retention is inhibited.

## Apraxia Battery for Adults- 2nd Ed. (ABA-2)

Barbara L. Dabul

Use the Apraxia Battery for Adults-Second Edition (ABA-2) to measure the presence and severity of Apraxia in adolescents and Adults. The objective scoring system provides the clinician with an initial step toward assessing recovery in relation to severity of Apraxia. The ABA-2 has been updated and redesigned. Those features clinicians found useful were preserved, and added features make the test even more effective at detecting the severity of Apraxia. More difficult items have been added to two subtests to raise the ceiling so clinicians can identify patients with mild Apraxia. Pictures and items have been updated and new normative data were collected in the Fall and Spring of 1998 and 1999.

## Color Trails Test (CTT)

Louis F. D'Elia, Paul Satz, Craig Lyons Uchiyama and Travis White

The CTT was developed to meet the need for a test with the sensitivity and specificity of the standard Trail Making Test (TMT), but one that was as free as possible from the influences of language and cultural bias. The CTT retains the psychometric properties of the standard TMT, but it substitutes the use of color for the use of English alphabet letters, making it more suitable in cross-cultural and other special needs contexts. Instructions may be presented either verbally or with visual cues. Respondents must be able to recognize Arabic numerals from 1 to 25 and to distinguish between the colors pink and yellow. Research has shown the CTT to be comparable to the original TMT. Validity of the CTT has been documented in a variety of clinical and neuropsychological populations.

## Ecologically Oriented Neurorehabilitation of Memory

Anthony Y. Stringer

The EON-MEM is a systematic, structured, and detailed cognitive rehabilitation program designed to help patients overcome memory impairment. Incorporating the author's 20 years of experience in cognitive rehabilitation and best empirical practices, the EON-MEM is ideal for adults with mild to moderate memory impairments caused by neurological conditions, including stroke, traumatic brain injury, and brain tumors. Incorporating mnemonic strategies and written aids, the EON-MEM introduces a simple, practical way to improve memory. Using the Write-Organize-Picture-Repeat (WOPR) method, along with an ingenious rhyming technique, EON-MEM helps patients recall information they need to function in their daily lives.

## Booklet Category Test- 2nd Ed. (BCT™)

**Nick A. DeFilippis and Elizabeth McCampbell**

The two portable BCT easel binders contain all 208 Category Test designs. The task demands of the BCT are essentially equivalent to those of the CT. The BCT eliminates the need for expensive, complex projection equipment. Administration instructions are now incorporated on the backs of the Stimulus Plates and in the Response Form to aid in standardization of the BCT administration. The BCT Response Form has also been updated to enhance its ease of use. The stimuli for each subtest are presented on a single page to aid in test administration and to facilitate the review of patient responses.

## Cognitive Strategies and Techniques for Brain Injury Rehabilitation (Brainwave-R)

**Kit B. Malia, Kristin C. Bewick, Michael J. Raymond and Thomas L. Bennett**

Brainwave-R is a comprehensive pen-and-paper based cognitive rehabilitation program that is divided into five hierarchically graded modules: Attention, Visual Processing, Memory, Information Processing, and Executive Functions. The program comprises the following: education, therapist instructions and client exercises. The program includes a total of 223 different exercises, which aim to optimize the development of functional skills via education, training on basic cognitive skills, and opportunities for generalization and strategy training. A metacognitive component to each exercise helps develop awareness of deficits and self-monitoring and self-evaluation skills.

## Aphasia Diagnostic Profiles

**Nancy Helm-Estabrooks**

The Aphasia Diagnostic Profiles (ADP) is a quick, efficient, and systematic assessment of language and communication impairment associated with aphasia that should be administered individually. Designed to meet the demands of today's medical climate, it contains nine brief subtests. Each subtest yields standard scores and percentile ranks. Behavioral Profile-indexes the patient's overall emotional state during testing. The ADP was standardized on 290 adults with neurological impairments (222 potentially aphasic adults) and 40 nonaphasic adults (median age 70). Reliability coefficients (interitem consistency) for subtest raw scores ranged from .73 (Behavioral Score) to .96 (Repetition), with most in the .90s. Test-retest coefficients ranged from .64 (Elicited Gestures) to .91 (Information Units).

## Multilingual Aphasia Examination, 3rd Ed. (MAE)

**Arthur L. Benton, Kerry deS. Hamsher, and Abigail B. Sivan, MAE Spanish Version by Gustavo J. Rey, Abigail B. Sivan, and Arthur L. Benton**

The MAE is a relatively brief test battery designed to evaluate the presence, severity, and qualitative aspects of aphasic disorder. Three tests assess different aspects of oral expression—naming, sentence repetition, and verbal associative capacity; three tests assess oral verbal understanding; one test assesses reading comprehension; and three tests assess oral, written and block spelling. Speech articulation and the fluency-nonfluency dimension of expressive speech are rated, but not systematically sampled. Writing is evaluated from performance on the test of written spelling. As a comprehensive aphasia battery, the MAE complements the use of other tests of neuropsychological function developed at the Benton Laboratory of Neuropsychology. The Manual includes new normative standards for elderly individuals, data on the discriminative value of each test, and recent clinical research results.

## PGI-Children's Memory Scale-PGI-CMS

### Adarsh Kohli, Samita Sharma & Dwarka Pershad

Evaluating the Memory of Children with various neurological and psychiatry disorder.

#### Test includes 10 Subtests:

- Remote memory
- Recent memory
- Mental Balance
- Attention and Concentration
- Delayed recall
- Immediate recall
- Verbal retention for similar pairs
- Verbal retention for diss. pairs
- Visual retention
- Recognition of common objects

## Brief Visuospatial Memory Test-Revised (BVMT-R™)

Ralph H. B. Benedict, PhD, ABCN

The BVMT-R is designed for use as a criterion measure of visuospatial memory within a large battery of neuropsychological tests, as a screening measure within a brief neuropsychological battery, and as a repeat measure to document changes in neurocognitive skills over time. BVMT-R materials were designed to be handled and transported easily, so that the test can be administered in a clinic setting or at the bedside using a clipboard. The materials include the Professional Manual, the Recall Stimulus Booklet, the Recognition Stimulus Booklet (easel format), and the Response Form.

## Communication Activities of Daily Living- 2nd Ed. (CADL-2)

Audrey L. Holl, Carol M. Frattali and Davida Fromm

Communication Activities of Daily Living, Second Edition (CADL-2) assesses the functional Communication skills of adults with neurogenic Communication disorders. The CADL-2 is given individually in about 30 minutes and contains 50 test items that assess Communication Activities in seven areas: Reading, writing, and using numbers; Social interaction; Divergent Communication; Contextual Communication; Nonverbal Communication; Sequential relationships; and Humor/metaphor/absurdity. Original CADL items that required role playing, use of an audiocassette for identification of environmental sounds, and certain props were eliminated to ease test administration and reduce total test time.

## Mini Inventory of Right Brain Injury - 2nd Ed. (MIRBI-2)

Patricia A. Pimental and Jeffrey A. Knight

The MIRBI2 lets you quickly screen clients for neurocognitive deficits associated with Right hemisphere lesions. Its development meets the need for a brief, standardized, Right-Brain Injury screening instrument that yields severity levels for deficit areas. Test reviews and professionals' comments from the field were incorporated into the new edition. A caliper is included for convenience and to standardize administration across examiners. The MIRBI2 was normed on 128 Right-Brain injured people. Reliability was estimated by coefficient alpha (.84). All item discrimination coefficients exceeded .3 acceptable levels and ranged from .37 to .81, median: .57. Inter-rater reliability was .99.

## Frenchay Dysarthria Assessment- 2nd Ed. (FDA-2)

Pamela Enderby and Rebecca Palmer

The second edition of Frenchay Dysarthria Assessment (FDA-2) includes new powerful knowledge about motor speech disorders and their contribution to neurological diagnosis. This updated edition remains a well-established test for the measurement, differential description, and diagnosis of Dysarthria. It can be used in international research, as well as all clinical settings. The test results can be recorded on the FDA-2 Rating Form, indicating both the client's strengths and weaknesses. The Rating Form also allows the clinician to compare the patient's performance across all the items. Normative data are reported for adults without Dysarthria as well as patients with specific Dysarthria associated with confirmed medical diagnoses.

## Hooper Visual Organization Test

H. Elston Hooper

The Hooper Visual Organization Test (VOT) allows you to quickly detect neurological impairment, even in clients who might otherwise be difficult to assess. Widely used with adults and adolescents, the VOT can be administered to children as well. This brief screening test measures the individual's ability to organize visual stimuli—a task that is particularly sensitive to neurological impairment. The test consists of 30 line drawings, each showing a common object—such as an apple or a ball—that has been cut into several pieces. The VOT minimizes situational factors—such as low motivation or inattention on the client's part—that can lead to diagnostic error. It is relatively independent of distractibility or verbal ability and doesn't require a motor response. The test is nonthreatening, and it usually engages even the most reluctant clients.

## Hopkins Verbal Learning Test- Revised

Jason Brandt and Ralph H. B. Benedict

THE HVLT-R offers a brief assessment of verbal learning and memory (recognition and recall). It is easy to administer and score and is well-tolerated even by significantly impaired individuals. Its use has been validated with brain-disordered populations (e.g., Alzheimer's disease, Huntington's disease, amnestic disorders). The Professional Manual provides information on administration and scoring, interpretation (including four case examples), development and psychometric characteristics, reliability, and validity of the instrument. Raw score to T-score conversions by age group are provided in the Appendix. Six distinct forms of the HVLT-R are available, eliminating practice effects on repeated administrations. Each form consists of a list of 12 nouns (targets) with four words drawn from each of three semantic categories.

## Scales of Cognitive and Communicative Ability for

Neurorehabilitation, Complete Kit

Lisa Milman and Audrey Holland

The Scales of Cognitive and Communicative Ability for Neurorehabilitation (SCCAN) assesses cognitive-communicative deficits and functional ability in patients in rehabilitation hospitals, clinics, and skilled nursing facilities. The SCCAN is appropriate for a broad range of neurological patients, provides a measure of both impairment and functional ability, and can be administered in 30 minutes. It can be used by speech language pathologists, neuropsychologists, psychologists, and related rehabilitation professionals.

## Multidimensional Everyday Memory Ratings for Youth™ (MEMRY™)

Elisabeth M. S. Sherman, PhD and Brian L. Brooks, PhD

It is designed to measure memory in children, adolescents, and young adults. It measures daily memory, learning, and executive aspects of memory, including working memory.

The MEMRY provides rapid screening for memory problems in youth, an ecologically relevant assessment of memory in everyday life, and multiple perspectives about memory capacity from different raters. The MEMRY can be used to determine whether a more comprehensive evaluation is required or as a core component of a comprehensive assessment for youth suspected of memory problems.

## Symbol Digit Modalities Test

Aaron Smith

The Symbol Digit Modalities Test is a simple, economical test is an ideal way for busy clinicians to screen for organic cerebral dysfunction in both children and adults. Brief, easy to administer, and much less expensive than neuropsychological test batteries, the SDMT has demonstrated remarkable sensitivity in detecting not only the presence of brain damage, but also changes in cognitive functioning over time and in response to treatment. The SDMT involves a simple substitution task that normal children and adults can easily perform. Using a reference key, the examinee has 90 seconds to pair specific numbers with given geometric figures. Responses can be written or oral, and for either response mode, administration time is just 5 minutes. The WPS AutoScore™ Test Form simplifies scoring. Because examinees can give written or spoken responses, the test can be used with almost anyone, including those with motor disabilities or speech disorders.

## The Dot Counting Test

Kyle Boone and David Herzberg

The Dot Counting Test (DCT) is a brief task that assesses test-taking effort in individuals. This convenient instrument allows you to detect lack of effort on cognitive measures, whether it is intentional (malingering) or unintentional (unconscious). The DCT measures an "overlearned" skill that is preserved in all but the most severe brain injuries. Because of this, a poor performance on the DCT suggests lack of effort. A validity study reported in the manual compared the DCT scores of 85 "suspect effort" patients (previously identified as "under attemptors" by rigorous inclusion and exclusion criteria) to those of patients in seven "normal effort" diagnostic groups: Depression, Schizophrenia, Head Injury, Stroke, Learning Disability, Mild Dementia, and Nonclinical. This study verified the ability of the DCT to discriminate among patients based on their effort status.

## Visual Search and Attention Test (VSAT)

Max R. Trenerry, Bruce Crosson, James DeBoe and William R. Leber

This norm-referenced test quickly measures attentional processes commonly disrupted in acute and chronic brain damage or disease. The VSAT consists of four visual cancellation tasks that require the respondent to cross out letters and symbols that are identical to a target. A stopwatch is required for administration. It yields an overall attention score and provides separate scores for left- and right-side performance to assess visual field defects, unilateral spatial neglect, or syndromes that affect the perception of portions of the visual space. Test-retest reliability of the VSAT is .95 for an average retest interval of 2 months. It correctly differentiated 84 to 86% of normal and brain-damaged subjects in validation and cross-validation samples.

## Visual Analog Mood Scales™ (VAMS™)

Robert A. Stern

The VAMS is a reliable and valid measure of eight specific mood states: Afraid, Confused, Sad, Angry, Energetic, Tired, Happy, and Tense. This simple, brief test places minimal cognitive or linguistic demands on the respondent and is appropriate for neurologically impaired individuals or those who are unable to complete more verbally or cognitively demanding instruments. Test materials include the Professional Manual, the VAMS Response Booklet, and a metric ruler. A pen or pencil is also required for administration. The scales have a "neutral" schematic face (and accompanying word) at the top of a 100 mm vertical line and a specific "mood" face (and word) at the bottom of the line.

## Ruff Figural Fluency Test (RFFT)

Ronald M. Ruff

The RFFT was developed to provide clinical information regarding nonverbal capacity for fluid and divergent thinking, ability to flexibly shift cognitive set, planning strategies, and executive ability to coordinate this process. Materials include the RFFT Professional Manual and the RFFT Test Booklet. The task is to draw as many unique designs as possible within a set period of time (60 seconds) by connecting the dots in different patterns. In each part of the test booklet, the five-dot stimuli are presented in 35 contiguous squares, arranged in a five square by seven square grid. Analogous to the different alphabetical letters that are used in verbal fluency tests, the 5-dot stimulus configurations are different in three parts of the test. In the other two parts, distractors are added to the dot configurations.

## FVLMA Kit: Functional Vision and Learning Media Assessment

Rebecca Burnett, Ed.D., and LaRhea Sanford, Ed.D.

This assessment tool helps practitioners gather, store, track, and analyze information regarding students' functional vision and appropriate learning media. Functional Vision and Learning Media Assessment (FVLMA) is written by Rebecca Burnett, Ed.D., and LaRhea Sanford, Ed.D. It has been revised and made an APH product. FVLMA is a user-friendly instrument that provides a framework for the systematic assessment of a student's visual functioning and needs for adapted educational media. Although not a standard test, FVLMA has been peer-reviewed by experts in the field of blindness and field tested by teachers and students.

## Finger Tapper Kit

PAR Staff

Finger tapper test provides information regarding brain damage and the integrity of brain functions. To measure the maximum oscillation rate of the index finger, the individual depresses a lever attached to a mechanical counter. A stopwatch is required.

## Rey Complex Figure Test and Recognition Trail (RCFT)

John E. Meyers and Kelly R. Meyers

The RCFT standardizes the materials and procedures for administering the Rey complex figure. The Recognition trial measures recognition memory for the elements of the Rey complex figure and assesses the respondent's ability to use cues to retrieve information.

**RCFT Materials:** The RCFT materials include the 120-page Professional Manual, Manual Supplement with data for children and adolescents, the laminated RCFT Stimulus Card, and the 16-page RCFT Test Booklet. A stopwatch is required for administration. The manual provides information on the development of the RCFT materials, administration and scoring procedures with scoring examples, demographically corrected normative data, guidelines for interpretation with case illustrations, and reliability and validity data.

## RIT™ (Reynolds Interference Task)

Cecil. R. Reynolds, PhD and Randy W. Kamphaus

The RIT is a Stroop-style test of complex processing speed that measures general neuropsychological integrity. It adds a layer of cognitive processing tasks— inhibition and attention-shifting—to simple tasks, which makes them more complex and thus more indicative of cognitive flexibility and selective attention.

The mental effort required for the RIT allows clinicians to measure the effects of TBI, stroke, brain insult or injury, dementia, Alzheimer's disease, and brain tumors. Alternately, the RIT can be used as a measure of attention and complex processing speed deficits and as a rapid means of measuring recovery from concussion.

## CTMT-2: Comprehensive Trail-Making Test Second Edition

Cecil R. Reynolds

The Comprehensive Trail-Making Test—Second Edition (CTMT2) is a standardized assessment that uses five visual search and sequencing tasks, called trails, that are heavily influenced by attention, concentration, resistance to distraction, and cognitive flexibility (or set-shifting). The basic task of the trails is to connect a series of stimuli (numbers, expressed as numerals or in word form, and letters) in a specified order as quickly as possible. The test's primary uses include the evaluation and diagnosis of brain injury and other forms of central nervous system compromise. Other purposes include detection of frontal lobe deficits; problems with psychomotor speed, visual search and sequencing, and attention; and impairments in set shifting along with monitoring recovery from concussion and other forms of TBI. Neuropsychologists; clinical, counseling, school, and pediatric psychologists; occupational therapists; speech and language professionals; physical therapists; and others interested in objective testing of functionality in brain–behavior relationships would all benefit from using the CTMT2.

## Neuropsychological Assessment Battery® (NAB®)

Robert A. Stern and Travis Whites

The NAB Provides an Efficient, Comprehensive Assessment of Attention, Language, Memory, Spatial Processing, and Executive Functions in Less Than 4 Hours... The NAB is a comprehensive, integrated, modular battery of 33 new neuropsychological tests developed to assess a wide array of neuropsychological skills and functions in adults (ages 18-97 years) who have known or suspected disorders of the central nervous system. The individual tests are grouped into six modules: Attention, Language, Memory, Spatial, Executive Functions, and Screening (which allows the clinician to determine which of the other five domain-specific modules are appropriate to administer to an individual patient).

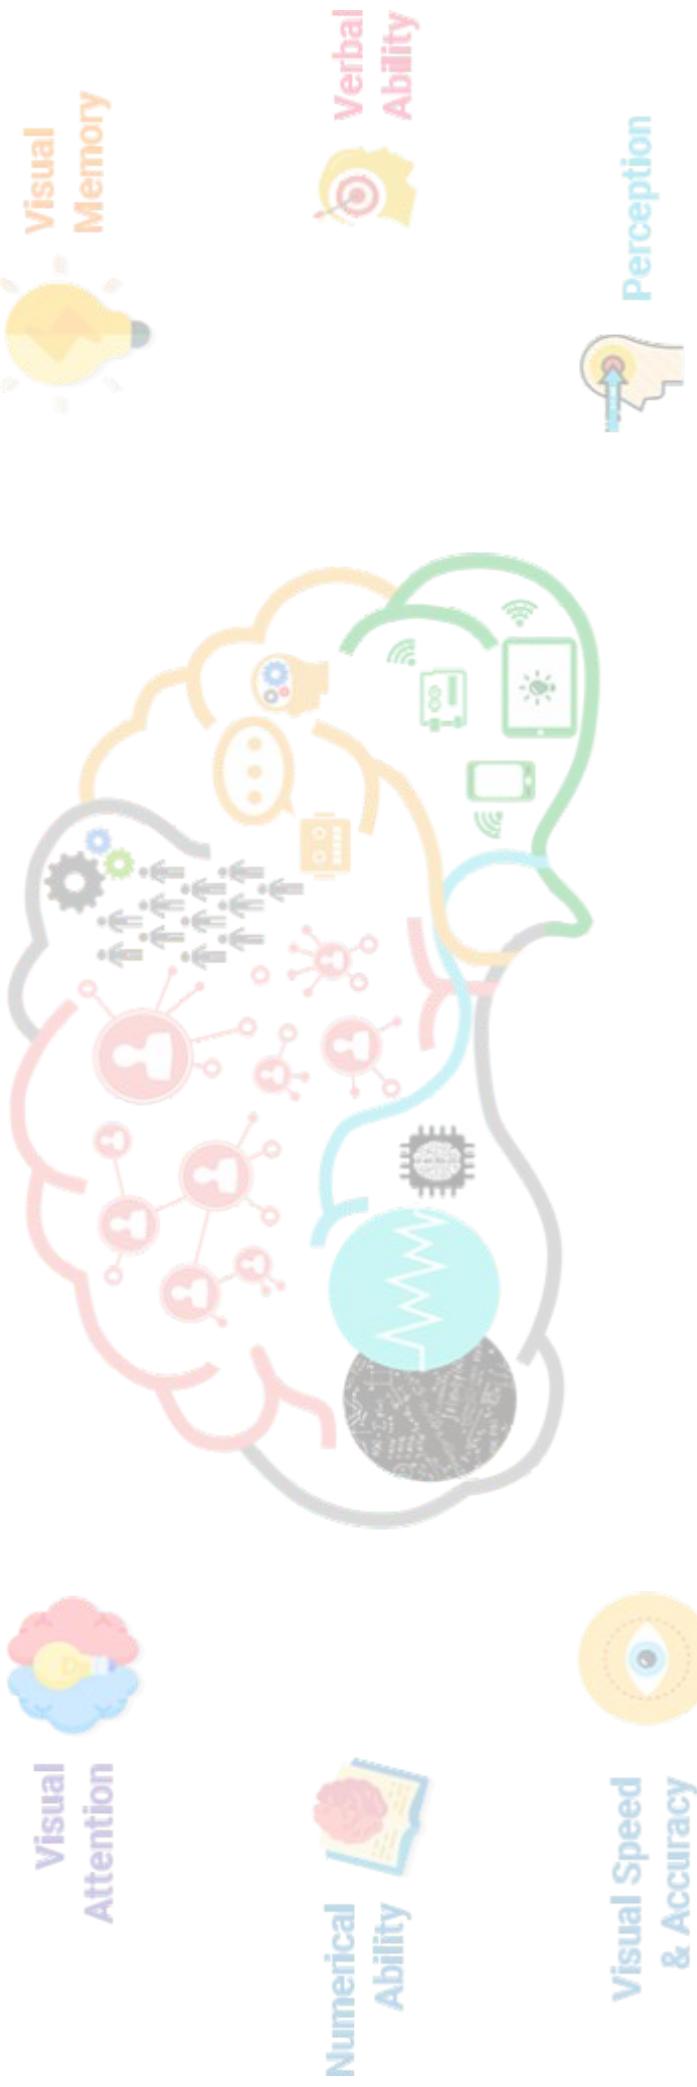

The NAB has excellent psychometric properties, includes extensive normative and validation data, provides clinical information that meets the needs of a broad range of modern referral sources, and offers two equivalent forms that reduce practice effects and facilitate reevaluation. The examiner can administer the entire NAB for a comprehensive evaluation of neuropsychological functioning in less than 4 hours.

Ten Innovative Features of the NAB

1. Feature Screening for both impaired and normal performance ("dual-screening capability")
2. Comprehensive coverage of functional domains
3. Combined strengths of flexible and fixed battery approaches to assessment
4. Avoidance of floor and ceiling effects
5. Reduced administration time
6. Entire battery normed on a single standardization group ("coordinated norming")
7. Demographically corrected norms based on age, education level, and sex
8. Provision of an equivalent/parallel form
9. Increased user-friendliness for both examiner and examinee
10. Focus on ecological validity

## Test of Nonverbal Intelligence- 4th Ed. (TONI-4)

Linda Brown, Rita J. Sherbenou and Susan K. Johnsen

The Test of Nonverbal Intelligence – Fourth Edition is a practical, easy-to-use, norm-referenced instrument that measures an individual's intelligence. The administration and response format are pragmatic with simple oral instructions, requiring test takers to answer only with simple but meaningful gestures such as pointing, nodding, or blinking. This test is ideal for those who have language, hearing, or motor impairments, or are not familiar with mainstream American culture. Data was collected from a normative sample of 2,272 people residing in 33 states. The toni-4 has two equivalent forms: Form A and Form B. Each form consists of 60 items, all of which are abstract/figural (i.e., void of pictures or cultural symbols), thus educational, cultural, or experiential backgrounds will not adversely affect test results.

## Primary Test of Nonverbal Intelligence (PTONI)

David J. Ehrler • Ronnie L. McGhee

The Primary Test of Nonverbal Intelligence (PTONI) is a theoretically sound, research-based method of assessing reasoning abilities in young children. Psychologists, diagnosticians, special educators, speech-language pathologists, and other professionals can use this test to identify both severe intellectual deficits and superior cognitive intelligence; help estimate future school success based on family history, educational background, and personality traits; and study a wide range of researchable topics and issues. The PTONI was normed on a culturally and ethnically diverse demographic sample of 1,010 children, residing in 38 states. It is unbiased, quick, accurate, and cost-efficient. Testing takes approximately 5 to 15 minutes. Minimal oral directions and a pointing-response format make it one of the simplest and easily understood of all nonverbal intelligence tests designed for young children.

The nonverbal format of the PTONI is especially appropriate for testing children who typically are not verbally or motorically well developed. Furthermore, directions in eight alternative languages are provided for the PTONI making it an appropriate assessment of intelligence for children from diverse language backgrounds.

## Comprehensive Test of NonVerbal Intelligence- 2nd Ed. (CTONI-2)

Don Hammill, Nils Pearson and J. Lee Wiederholt

The (CTONI)-2 is a popular norm-referenced Test that uses NonVerbal formats to measure general Intelligence of children and adults whose performance on traditional Tests might be adversely affected by subtle or overt impairments involving language or motor abilities. The (CTONI)-2 measures analogical reasoning, categorical classification, and sequential reasoning, using six subTests in two different contexts: Pictures of familiar objects (e.g., people, toys, animals) and geometric designs (unfamiliar sketches and drawings). The six subTests are: (1) Pictorial Analogies, (2) Geometric Analogies, (3) Pictorial Categories, (4) Geometric Categories, (5) Pictorial Sequences, and (6) Geometric Sequences.

## PRODUCT OVERVIEW

Product Code: 17-1280-KT

₹: 1,09,340.00

Age Range: 5-0 through 17-11 yrs

Time Taken: 10-15 minutes for the

Abbreviated Battery; 30 minutes for the Standard Battery; and 45 minutes for the Extended Battery

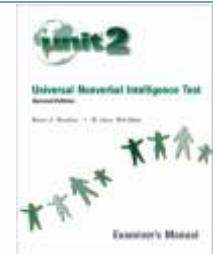

Administration: Individual

Language: English

## Universal Nonverbal Intelligence Test™ -2 (UNIT™-2)

Bruce A. Bracken and R. Steve McCallum

In most states and education agencies throughout the country, measures of cognitive ability are used as a component of the referral process for both giftedness programs and special education eligibility decisions. Ability measures that eliminate language dependent components may be better suited for informing program and service decisions about students with culturally, linguistically and ethnically diverse backgrounds. Pure cognitive abilities can be measured without language dependence. Nonverbal assessment provides the solution. The Universal Nonverbal Intelligence Test (UNIT) is a set of individually administered specialized tasks that measure cognitive abilities. Unique to the UNIT, both administration and item response formats are completely nonverbal.

## Kaufman Brief Intelligence Test, Second Edition (KBIT-2)

Alan S. Kaufman, PhD, Nadeen L. Kaufman, EdD

Kaufman Brief Intelligence Test Second Edition (KBIT-2) is a brief measure of verbal and nonverbal intelligence used with individuals ages 4 through 90 years.

### KBIT-2 Provides:

Improved Crystallized (Verbal) Scale—includes receptive and expressive vocabulary items that do not require reading or spelling.

Attractive test items—offers new, full-color items that are specially designed to appeal to children and reluctant examinees.

### PRODUCT OVERVIEW

Product Code: 14-3000-KT

₹: Price on Request

Age Range: 4:0-90:0 Years

Time Taken: 20 minutes

Administration: Individual

Language: English

## Wechsler Preschool and Primary Scale of Intelligence™ – Fourth Edition

(WPPSI™ – IV)

David Wechsler

The WPPSI-IV includes extensive content changes based on the most current literature in the field and feedback from experts and clinicians.

### Benefits:

Identify and qualify students with cognitive delays for special services.

Evaluate children for cognitive delays, intellectual disabilities, autism and giftedness.

Determine admittance eligibility for private schools.

Determine the impact of traumatic brain injury on cognitive functions in children.

Determine cognitive ability of children in question during custody hearings.

### PRODUCT OVERVIEW

Product Code: 14-2036-KT

₹: Price on Request

Age Range: 2:6 – 7:7 years

Time Taken: Ages 2:6 to 3:11:30–45 Minutes,  
Ages 4:0 to 7:7: 45–60 Minutes

Administration: Individual

Language: English

## Phonological and Print Awareness Scale (PPA Scale)

Kathleen T. Williams

The new Phonological and Print Awareness Scale (PPA Scale) measures early literacy skills and allows examiners to track the development of these skills over time. This research-based, standardized test can be administered quickly and helps identify children who may benefit from early intervention.

The PPA Scale assesses two important literacy skills that consistently demonstrate a strong, predictive relationship with later measures of reading and writing:

Phonological awareness: The ability to recognize and manipulate the individual sound structures of a whole word without any reliance on print

Print awareness: The understanding of the elements of print, including alphabet knowledge and concepts about print (for example, reading starts at the top left of a page)

Development of the PPA Scale was guided by expert research and reports highlighting the importance of both phonological and print awareness in learning to read and write successfully.

### PRODUCT OVERVIEW

#### COMPREHENSIVE PRINT KIT

Product Code: 27-0074-KT

₹: 63,470.00

Age Range: 3 years, 6 months to 8 years, 11 months

Time Taken: 10 to 15 minutes

Administration: Individual

## Reynolds Intellectual Assessment Scales™, Second Edition RIAS-2

Introductory Kit

Cecil R. Reynolds, PhD, and Randy W. Kamphaus, PhD

The RIAS-2 retains all the features that made the original instrument so popular and gives practitioners even more reason to trust this instrument.

### Features and benefits

Assesses both verbal and nonverbal intelligence. Verbal intelligence is assessed by measuring verbal problem solving and verbal reasoning, which uses acquired knowledge and skills. Nonverbal intelligence is assessed by measuring reasoning and spatial ability using novel situations and stimuli.

Optional memory subtests available. Verbal and nonverbal memory is assessed via the Composite Memory Index, useful when a broad estimate of memory is desired.

Informs decisions in classification, selection, and educational placement. The RIAS-2 is ideal as a stand-alone intellectual assessment or as part of a larger battery to diagnose specific disorders, such as intellectual disabilities or learning disabilities, and for educational placement.

## Reynolds Intellectual Screening Test RIST-2 Introductory Kit

Randy W. Kamphaus, PhD, and Cecil R. Reynolds, PhD

Developed to provide a quick and reliable screening measure of general cognitive aptitude, the RIST-2 is ideal for identifying individuals who may need a more comprehensive assessment of intelligence in a variety of settings. The RIST-2 also can be useful in clinical and school practice when a global estimate of intelligence is all that is needed.

### Test structure

Derived from the updated RIAS-2 subtests, the RIST-2 retains the same two subtests as the original RIST: Guess What and Odd-Item Out. Guess What, a verbal subtest, which is a traditional measure of crystallized intelligence; and Odd-Item Out, a nonverbal subtest, which focuses on fluid intelligence.

## Spatial Cognition Tool

Kirti Singh (Chauhan) & Dr. Sudha Chhikara

The test of Spatial cognition is meant for measurement of spatial cognition for children. This test is divided in four major components each having its sub component. Mapping (equality of area, mental rotation, reversibility, selective inference & arrangement of objects), Net working (distance decentration, spatial coordination, following order, Verbal visualization, traffic rules) Topology (Topological spacing, Perspective view/occlusion, Projective space, Topological mapping, Positional analysis & closure) and Manipulative arrangement (In-closed space, In-open space, Figurative). This test is appropriate for children from 6 to 8 years of age. The content of the test are designed to be suitable for both sexes as well as children from various socio-economic and cultural groups.

## Brief Cognitive Status Exam (BCSE)

Brief Cognitive Status Exam helps evaluate global cognitive functioning in patients with dementia, mild MR, TBI, or suspected Alzheimer's disease.

Covers seven cognitive domains: Orientation, Time, Mental Control, Planning and Visual-Perceptual Processing, Incidental Recall, Inhibitory Control, and Verbal Productivity.

Designed to yield a performance classification focused on impaired rather than normal or superior performance (Average, Low Average, Borderline, Low, Very Low).

## Raven's – Educational CPM/CVS, India English Edition

John C. Raven

Raven's Progressive Matrices and Vocabulary Scales enjoy a long and famous history in the assessment of general cognitive abilities in children.

The Progressive Matrices usefully provide an assessment of non-verbal ability, an important feature for a linguistically and culturally diverse population such as that of India. Vocabulary Scales provide scores in the verbal domain. This important assessment has been standardised for India, so now you can confidently use the Raven's to assess non-verbal and verbal aspects of general ability for children in India.

## Raven's 2 Kit

John C. Raven

Raven's 2 provides a measure of clear-thinking ability and intellectual capacity that minimizes the impacts of language skills and cultural differences.

Provides a standard score as well as a percentile rank.

Can be administered fairly to virtually everyone, including those who are not language proficient or have communication-related disabilities.

Digital test forms are constructed from item bank to limit item overlap between test takers, for greater security and limitation of practice effects.

## Multidimensional Aptitude Battery-II

Douglas N. Jackson and Narender K. Chadha

The MAB-II is a world class tool for the assessment of aptitude and intelligence. It is the best measures of general cognitive ability and is also best value. It assesses 10 distinct domains of human intelligence functioning, grouped into two - verbal and performance. It could be used for aptitude assessment for counseling and employment purposes. It is also a helpful tool for psychological research on intelligence and its relationship with other variables, such as job performance and learning.

## RAIT™ (Reynolds Adaptable Intelligence Test)

Cecil R. Reynolds

The RAIT is a rapid, reliable, and valid intelligence test designed for group or individual administration. Unlike many similar measures, the RAIT can be administered via computer.

### Features and benefits

- Composed of seven subtests that assess crystallized intelligence, fluid intelligence, and quantitative aptitude or intelligence.
- Designed to provide continuity of measurement across a wide age span.
- Requires minimal reading skill and almost no motor coordination and visual-motor skill, reducing the complications that can occur when manipulated objects (e.g., blocks) are used to assess intelligence.
- Administration and scoring are also available through PARiConnect; this digital version allows you to administer the full battery (i.e., all seven subtests) or the abbreviated battery (i.e., crystallized and fluid subtests only) and automatically calculates a measure of effort.

## PRODUCT OVERVIEW

## RAIT™-NV (Reynolds Adaptable Intelligence Test™—Nonverbal)

Cecil R. Reynolds

Derived from the RAIT, the RAIT-NV is a rapid, reliable, and valid test of nonverbal intelligence. It was created using the two nonverbal subtests from the RAIT to give an accurate assessment of fluid intelligence. Although the RAIT-NV has a maximum time limit, it remains a power test and not a speeded test.

### Features and benefits

- Created for use with individuals who do not speak English, those with hearing impairments, individuals unwilling to communicate verbally, or populations with minimal language capabilities. No reading skill, motor coordination, or visual-motor capabilities are required, reducing the confounds that occur when manipulated objects are used to assess nonverbal intelligence.
- Can be administered individually or in a group format. May be used in human resource and related industrial settings, schools, juvenile and adult justice systems, and clinical practices.
- Designed to provide continuity across a wide age span.
- Examined rigorously to be free of gender and ethnic bias, reducing gender and ethnicity as confounds, particularly important for use with English as a second language (ESL) students and adults.

## Gifted and Talented Evaluation Scales 2nd Ed. (GATES-2)

James Gilliam, Betsy Carpenter and Janis Christensen

The GATES is an innovative, quick approach for identifying students who are Gifted and Talented. Based on the most current federal and state definitions, the GATES satisfies the critical national need for a norm-referenced instrument that assesses the characteristics, skills, and talents of Gifted students. The GATES was normed in 1995 on a representative national sample of over 1,000 persons who were identified as Gifted and Talented. Characteristics of the normative group approximate those for the 1990 census data relative to gender, geographic location, race, ethnicity, and socioeconomic status.

## PRODUCT OVERVIEW

## Comprehensive Receptive and Expressive Vocabulary Test - 3 (CREVT-3)

Gerald Wallace and Donald D. Hammill

The Comprehensive Receptive and Expressive Vocabulary Test-Second Edition (CREVT-2) is an innovative, efficient measure of both receptive and expressive oral vocabulary. The CREV-2 has two subtests and is based on the most current theories of vocabulary development. The CREV-2 will rapidly become the new standard in vocabulary assessment.

## Seguin Form Board Test (Manual & Answer Sheets)

PPPL Staff

The Seguin Form Board Test is based on the single factor theory of intelligence, measures speed and accuracy. It is useful in evaluating a child's eye-hand co-ordination, shape-concept, visual perception and cognitive ability. The test primarily used to assess visuo-motor skills. It includes Gesell figures where in the child is asked to copy ten geometrical figures to evaluate visuo-motor ability. Test materials consist of ten differently shaped wooden blocks and a large form board with recessed corresponding shapes.

## Rapid Automatized Naming And Rapid Alternating Stimulus Test (RAN/RAS)

Maryanne Wolf and Martha Bridge Denckla

The RAN and RAS Tests are considered to be the "gold standard" of naming tests. The tests are simple, fun, and quick to administer (i.e., five to ten minutes for all six tests) make tests an important addition to any prediction battery or diagnostic assessment of oral and written language from age five to adulthood. The RAN and RAS Tests are individually administered measures designed to estimate an individual's ability to recognize a visual symbol such as a letter or color and name it accurately and rapidly.

## Creativity Assessment Packet (CAP)

Frank Williams

The CAP measures the cognitive thought factors of fluency, flexibility, elaboration, originality, vocabulary, and comprehension. CAP is a test Packet consisting of two group-administered instruments for children: the Test of Divergent Thinking (Forms A and B) and the Test of Divergent Feeling. A third instrument, The Williams Scale, is a rating instrument for teachers and parents of the same tested factors among children. CAP is suitable for children ages 6 through 18 and is self-scoring.

## Test of Early Mathematics Ability- 3rd Ed. (TEMA-3)

Herbert P. Ginsburg and Arthur J. Baroody

The TEMA-3 measures the mathematics performance of children and is also useful with older children who have learning problems in mathematics. It can be used as a norm-referenced measure or as a diagnostic instrument to determine specific strengths and weaknesses. Thus, the test can be used to measure progress, evaluate programs, screen for readiness, discover the bases for poor school performance in mathematics, identify gifted students, and guide instruction and remediation. The test measures informal and formal (school-taught) concepts and skills in the following domains: numbering skills, number-comparison facility, numeral literacy, mastery of number facts, calculation skills, and understanding of concepts. It has two parallel forms, each containing 72 items.

## Wechsler Abbreviated Scale of Intelligence | Second Edition(WASI II India)

David Wechsler

WASI-IIINDIA provides a brief, reliable measure of cognitive ability for use in clinical, educational and research settings. With India norms, WASI is now more accurate for use with the Indian population.

WASI was developed to meet professionals' demands for a brief but reliable measure of intellectual ability that could be used in multiple settings. In India, professionals, generally in clinical settings, who faced time constraints in assessing intellectual abilities often selected subtests from comprehensive batteries to estimate IQ but could not derive Full-Scale IQs (FSIQs) from these subtests. WASI-IIINDIA addresses this problem by providing FSIQs not only from four subtests but also from administering only two subtests that take about 15 minutes to administer.

## PRODUCT OVERVIEW

Product Code: 17-3084-KT

₹: 1,48,830.00

## Stanford-Binet Intelligence Scales - 5th Ed. (SB-5)

Gale H. Roid

The Stanford-Binet Intelligence Scales, Fifth Edition(SB5)is a contemporary assessment with a rich tradition, which began in 1916 when Lewis Terman completed his American revision of the Binet-Simon Scale (1905, 1908). Through various editions, this assessment has become widely known and is acknowledged as the standard for intelligence measurement.

## Cognitive Assessment of Young Children (CAYC)

M. Beth Langley • Rebecca Fewell • Taddy Maddox

The Cognitive Assessment of Young Children (CAYC) is an easy-to-administer screening and assessment tool used to identify children with developmental delays. It is based on the same reliable, successful, theoretical model upon which the DASI (Developmental Activities Screening Inventory) and DASI-II were both designed. This test was normed on 743 demographically representative children, residing in 16 different states.

**The CAYC serves four main purposes:**

1. Early Identification of Developmental Delay in order to facilitate early intervention.
2. Determination of Strengths and Weaknesses contributes valuable information to the total diagnostic effort.
3. Documentation of Progress provides clinicians, early childhood educators, teachers, diagnosticians, and psychologists a base from which to monitor change and evaluation. Conclusions can then be made on whether to continue, modify, or terminate the intervention program.
4. Research Data can be collected from the well-constructed, reliable and valid results.

## Kaufman Assessment Battery for Children, Second Edition Normative Update Supplement (KABC™-II NU)

Alan S. Kaufman, PhD, Nadeen L. Kaufman

The KABC-II NU updates the normative data for the existing KABC-II product. It maintains the strengths of the current product while providing updated normative information that reflects the changing population of children in the United States. The KABC-II NU Manual Supplement provides detailed information on the new standardization sample and includes the new normative tables.

## Wechsler Adult Intelligence Scale – Fourth Edition, India (WAIS-IV INDIA)

David Wechsler

The Wechsler Adult Intelligence Scale® – Fourth Edition is adapted and standardized for India, to give you the most comprehensive and advanced measure of cognitive ability in adolescents and adults, in response to the shifting demographic and clinical landscape in India. WAIS-IVINDIA celebrates the tradition pioneered by David Wechsler, which is solidly grounded in the scientist-practitioner model, integrating both nomothetic and idiographic perspectives. WAIS-IVINDIA provides subtest and composite scores that represent intellectual functioning in specific cognitive domains, as well as composite scores that represent general intellectual ability (i.e., Full Scale IQ).

WAIS-IVINDIA is the updated version of Wechsler Adult Intelligence Scale – Third Edition (WAIS-III)

## Emotional Intelligence Scale for Adults

Dr. Arun Kumar and Prof. Suraksha Pal

It is a five points rating scale to measure the final variations in response of the teachers. It was decided seeing the nature of the tool, construct a five point rating scale, so that it would explore the finer variation in teachers responses. After under taking the academic exercise, the following dimensions which constitute the Emotional Intelligence is given by Goleman in 1995.

1. Self awareness: Observing yourself and recognizing feeling as it happens.
2. Managing emotions: Handling feeling so that they are appropriate, realizing what is behind a feeling, finding ways to handle fears anxieties, anger and sadness.
3. Maturity: Channeling emotions in the services of a goal; emotional self control.
4. Empathy: Sensitivity to others feeling and emotions and taking their perspective appreciating the differences in how people feel about things.
5. Social skill and Social competency: Capacity for understanding what other are saying and feeling and capacity for acting in such a way that one is able to obtain desired results from others and reach personal goal.

## Hodson Assessment of Phonological Patterns — 3rd Ed. (HAPP-3)

Barbara Williams Hodson

The Hodson Assessment of Phonological Patterns-Third Edition (HAPP-3; Hodson, 2004) is a valid, reliable, standardized test that is norm-referenced and also criterion-referenced. The HAPP-3, as well as its predecessors (APP, 1980; APP-R, 1986), was designed for children with highly unintelligible speech. Some major improvements include: provision of normative data and technical information, stimulus words and phonetic transcriptions that have been updated and internationalized, and comprehensive evaluation analysis forms that are larger and "user friendly."

## Photo Articulation Test- 3rd Ed. (PAT-3)

Barbara A. Lippke, Stanley E. Dickey, John W. Selmar and Anton L. Soder

The Photo articulation Test-Third Edition (PAT-3) is a completely revised edition of the popular Photo articulation Test. It meets the nationally recognized need for a standardized way to document the presence of articulation errors. The PAT-3 enables the clinician to rapidly and accurately assess and interpret articulation errors. The test consists of 72 color Photographs (9 Photos on each of eight sheets). The first 69 Photos test consonants and all but one vowel and one diphthong. The remaining 3 pictures test connected speech and the remaining vowel and diphthong. A deck of the same 72 color Photographs, each on a separate card, is provided for further diagnosis and may be used in speech-language remediation.

## Multiple Intelligences Inventory

Amitha V & Dr. A.H.M Vijayalaxmi

A Multiple Intelligence theory inventory is structured to assess the dominant intelligences profile present in the children and help them understand their skills as well as hidden faculties for their holistic success in improving their confidence, interest, efficacy and efficiency. The elementary classroom children in the age range of 10 – 13 years can utilize this inventory to understand their intelligence profile. The tool consists of the eight Multiple Intelligences mentioned by Dr. Howard Gardner (1983) in his theory – Verbal/Linguistic Intelligence (10 items), Logical/Mathematical Intelligence (10 items), Rhythmic/Musical Intelligence (10 items), Bodily/Kinesthetic Intelligence (10 items), Visual/Spatial Intelligence (10 items), Interpersonal Intelligence (10 items), Intrapersonal Intelligence (10 items) and Naturalistic Intelligence (10 items). It is available in English.

## Test of Preschool Vocabulary (TOPV)

Steven C. Mathews \* Lynda Miller

The Test of Preschool Vocabulary (TOPV) is an easy-to-administer test that is appealing to preschoolers. The TOPV encourages children to share the words they know. The test measures children's ability to recognize (receive) and use (express) single words that represent all parts of speech and a variety of basic concepts (things, events, experiences, temporality, relational and substantive processes, and relative position). The words tested are ordered by difficulty level, progressing from familiar words and concepts to less familiar ones.

The TOPV has two subtests, Expressive Vocabulary and Receptive Vocabulary, the results of which are combined to create a composite, the General Vocabulary Index.

Test results can be used to (a) identify children with oral language disorders, (b) diagnose early semantic ability, (c) compare receptive and expressive vocabulary knowledge, (d) monitor language intervention progress, and (e) do research.

## Clinical Assessment of Articulation and Phonology–2nd Ed. (CAAP-2)

Wayne Secord and Joann Donohue

The CAAP-2 is the most current assessment for articulation and phonology. It is time-efficient, accurate, and yields results that are easy to score and interpret. You may administer the Articulation Inventory in 15-20 minutes. The checklist approach to assessing phonological processes virtually eliminates the need for phonetic transcription. CAAP-2 is an assessment that you will like giving and children will enjoy taking.

## Intellectual Disability Scale(IDS)

Dr. Sarika Sharma & Anash Kumar Das

Intellectual disability, formerly referred to us "mental retardation" is characterized by a combination of deficits such as cognitive/intellectual functioning, adaptive/behavior functioning and social functioning. It consists of 50 items including domains like Present Functioning, Intellectual Functioning, Behavior Skills, Adaptive Skills, Down Syndrome, Klinefelter Syndrome, Fragile X Syndrome, William Syndrome. Age limit is 3 to 18 years and it is available in English and Hindi.

## The WORD Test 3—Elementary

Linda Bowers \* Rosemary Huisinagh \* Carolyn LoGiudice \* Jane Orman

The WORD Test 3—Elementary assesses a student's ability to recognize and express semantic attributes critical to vocabulary growth and language competency. Current research clearly supports the impact each task on this test has on academic and reading competency. You will understand how your students attach meaning to words and why they might be struggling in the classroom.

The six subtests of The WORD Test 3—Elementary measure skills that correlate with word mastery, reading comprehension, and overall academic success. Test items are from the curriculum, including language arts, social studies, math, health, and science. There are fifteen tasks in each subtest.

## Family Relations Test: Children's Version

**Eve Bene and James Anthony**

The test assesses the feelings and emotions, negative and positive, that a child has towards their family. Separate record forms are designed for use with children age 3-7 years and 7-15 years respectively. Measures outgoing and incoming emotions, negative and positive feelings for each figure, highlighting relationships, which you may need to focus on. Gives you information about a child's views on their family relationships and thoughts concerning them, to which you can then focus attention. Contents an easy-to-use scoring procedure which assesses the feelings associated with material and parental over-protection and over-indulgence and personality strength and weakness.

## Scales for Assessing Emotional Disturbance - Third Edition (SAED-3)

**Michael H. Epstein and Douglas Cullinan**

The Scales for Assessing Emotional Disturbance—Third Edition (SAED-3) will help special educators, education diagnosticians, school psychologists, and other professionals identify students with emotional disturbance (ED). The SAED-3 includes a norm-referenced 45-item Rating Scale, a norm-referenced 10-item Screener, a supplemental Screener Decision Summary Form, a Developmental/Educational Questionnaire, and an Observation Form. These components can be used alone or in various combinations to create IEP goals, supplement other Functional Behavior Assessments, document progress, and facilitate research. Each measure is described briefly below.

## Suicidal Ideation Questionnaire (SIQ)

**William M. Reynolds**

The SIQ assesses the frequency of suicidal thoughts in adolescents and may be used to evaluate or monitor troubled youths. Because not all depressed adolescents are suicidal and not all suicidal adolescents are depressed, the SIQ is a valuable component in a comprehensive assessment of adolescent mental health. Items are rated on a 7-point scale. Hand-Scorable for individual or small group administration. Grades 10-12 (SIQ); Grades 7-9 (SIQ-JR). Use to evaluate large-scale intervention/prevention programs. Reliability coefficients are .97 for the SIQ; .93-.94 for the SIQ-JR. Validity consistently supported in many published content, construct, and clinical studies.

## PRODUCT OVERVIEW

Product Code: 20-1025-KT

₹: 17,430.00

Age Range: 18 to 88 years

Time Taken: 10 minutes or less

Administration: Individual/Group

## Adult Suicidal Ideation Questionnaire (ASIQ)

**William M. Reynolds**

The ASIQ can be used during intake interviews or during treatment to reduce liability and take appropriate preventive action whenever there may be a risk of suicide. Endorsement of critical items alerts you immediately in case of serious suicidal ideation. The ASIQ includes a 25-item self-report; items rated on a 7-point scale; and a built-in scoring key. Norms are based on 2,000 adults ages 18 years and older, including psychiatric outpatients, normal adults, and college students. Internal consistency and test-retest reliability coefficients range from .96-.97 and .85-.95, respectively, in various samples. The ASIQ yields a total score with a corresponding T score and percentile score. Comparing the total score to a cutoff allows you to identify individuals in need of further evaluation for suicide risk. Results of several research studies support the ASIQ as a valid measure of suicidal ideation.

## Geriatric Rehabilitation and Restorative Assessment System (GRRAS™)

**P. Andrew Clifford, PhD, Kristi D. Roper, PhD, and Daisha J. Cipher, PhD**

Designed to assess emotional and behavioral dysfunction associated with medical and psychiatric comorbidities of geriatric individuals who reside in long-term care (LTC) settings, the GRRAS documents the frequency, duration, and intensity of symptoms and plays an important role in establishing medical necessity for mental health services.

## General Health Questionnaire (GHQ)

David Goldberg and Paul Williams

The General Health Questionnaire (GHQ) screens for non-psychotic psychiatric disorders and is available in the following versions:

GHQ-60: the fully detailed 60-item questionnaire

GHQ-30: a short form without items relating to physical illness

GHQ-28: a 28 item scaled version – assesses somatic symptom, anxiety and insomnia, social dysfunction and severe depression

GHQ-12: a quick, reliable and sensitive short form – ideal for research studies.

The user's guide provides guidance for researchers intending to set up their own localised validation studies.

## FAST™ and FASI™

### Firestone Assessment of Self-Destructive Thoughts™

### and Firestone Assessment of Suicide Intent

Robert W. Firestone, PhD and Lisa A. Firestone, PhD

The FAST is an 84-item self-report instrument designed to measure a broad range of self-destructive behavior patterns characteristic of suicidal individuals, including hopelessness, depression, anxiety, and suicide ideation.

The client is asked to endorse how frequently he or she is experiencing self-critical/self-deprecating thoughts in the form of an internal dialogue or voice (i.e., negative thoughts directed toward oneself). When items are presented in this form, they often bring to light elements of a self-destructive process that have been partially or completely subconscious.

The FASI is a subset/brief version of the FAST; it consists of the 27 FAST items that best predict suicide risk.

### PRODUCT OVERVIEW

Product Code: 20-1315-KT

## SPECTRA™ (Indices of Psychopathology)

Mark A. Blais, PsyD, and Samuel Justin Sinclair

The SPECTRA provides a quick hierarchical assessment of adult psychopathology. It can be used to evaluate individuals in a variety of clinical settings, such as inpatient and outpatient clinics, hospitals, schools, and forensic settings.

### Features and benefits

- Measures 12 clinically important constructs (depression, anxiety, social anxiety, post-traumatic stress, alcohol problems, severe aggression, antisocial behavior, drug problems, psychosis, paranoid ideation, manic activation, and grandiose ideation).
- Constructs are organized into three higher-order psychopathology spectra (Internalizing, Externalizing, and Reality-Impairing).
- These spectra scores combine to provide a General Psychopathology Index (GPI).
- Maps on to DSM-5™ conditions and links assessment findings to quantitative model research literature.

## Mini-ICF-APP Social Functioning Scale (MINI ICF)

Michael Linden, Stefanie Baron, Beate Muschalla & Andrew Molodynski

The Mini-ICF-APP Social Functioning Scale is designed for adults with mental health disorders of all types, and of varying degrees of disability.

The WHO International Classification of Functioning, Disability and Health (ICF) was developed to provide a standardised classification of functioning and disability. The framework provided by the ICF is detailed and complex, which means that it can be difficult to use in day-to-day clinical practice. The Mini-ICF-APP Social Functioning Scale was therefore created to allow the reliable and rapid measurement and recording of impairments of capacity. It is the first instrument of its kind.

## Emotional Processing Scale(EPS)

**Roger Baker, Peter Thomas, Sarah Thomas, Mariaelisa Santonastaso & Eimear Corrigan**

The Emotional Processing Scale (EPS) is a 25-item questionnaire designed to identify emotional processing styles and potential deficits. Developed over the course of 12 years by an experienced team, the EPS is for use by clinicians working in mental health, psychological therapy and health psychology, as well as researchers interested in the emotional life of healthy individuals and other populations.

- Identify and quantify healthy and unhealthy styles of emotional processing;
- Assess the contribution of poor emotional processing to physical, psychosomatic and psychological disorders;
- Provide a non-diagnostic framework to assess patients for research or therapy;
- Measure changes in emotions during therapy/counselling; and assist therapists in incorporating an emotional component into their formulations of psychological therapy.

## Social-Emotional Developmental Age Level (SEDAL)

**Joop Hoekman, Aly Miedema, Bernard Otten & Jan Gielen**

The SEDAL is an assessment that includes 152 items divided equally into two interrelated domains, social and emotional development, classified in increasing age categories from 0 to 14. Its broad application is useful for children with intellectual disabilities, behavioural problems, sensory or motor disabilities, as well as children with normative development and adults with intellectual disabilities or delayed development. It also offers electronic scoring and analysis.

The SEDAL is a behavioural assessment scale designed to establish social-emotional progress in children and adults. Test results deliver in-depth analysis to aid and plan for an individual's ongoing positive growth and development.

*The Social Development domain includes dimensions such as:*

- Social independence
- Self-awareness in social contexts
- Social skills
- Initiating contact
- Social assessment skills
- Relating to authority

*The Emotional Development domain's dimensions include:*

- Emotional independence
- Impulse control
- Fears
- Moral development
- Self image
- Regulation of emotions

## Children's Aggression Scale (CAS)

**Jeffrey M. Halperin, PhD, and Kathleen E. McKay, PhD**

The CAS is a multi-informant rating scale that evaluates the setting-specific frequency and severity of aggressive acts in children through parent and teacher rating forms.

Items describe aggressive acts and are weighted differentially depending on the severity of the act.

Standardized on a community sample of 438 parents and 516 teachers of children ages 5-18 years.

Data were also collected on a clinical sample of 247 parents and 252 teachers of children who had been diagnosed with one or more of the following: ADHD, Oppositional defiant disorder, conduct disorder, and social maladjustment.

## SAVRY™

### Structured Assessment of Violence Risk in Youth

**Randy Borum, PsyD, Patrick Bartel, PhD, and Adelle Forth**

The SAVRY is composed of 24 items in three risk domains (Historical Risk Factors, Social/Contextual Risk Factors, and Individual/Clinical Factors), drawn from existing research and the professional literature on adolescent development as well as on violence and aggression in youth.

## Survey of Pain Attitudes (SOPA™)

Mark P. Jensen, PhD, and Paul Karoly

The SOPA helps you understand the pain-related beliefs of your chronic pain patients.

**Both adaptive and maladaptive beliefs are assessed**

Adaptive Beliefs scales consist of Control and Emotion; Maladaptive Beliefs scales consist of Disability, Harm, Medication, Solicitude, and Medical Cure.

## Social Emotional Assets and Resilience Scales (SEARS)

Kenneth W. Merrell

Focusing on a child's strengths, the SEARS can be used with children and adolescents who exhibit a variety of clinical problems or who are at high risk for developing such problems.

### Features and Benefits

Includes separate assessment forms for children (ages 8 to 12 years or Grades 3 to 6) and for adolescents (ages 13 to 18 years or Grades 7 to 12), as well as teacher report forms and parent report forms. The forms may be used for any combination of student, parent, and teacher assessment.

All forms measure common constructs (e.g., self-regulation, responsibility, social competence, empathy), but also include items designed to capture the unique perspective of the rater. Items are phrased as desirable positive characteristics.

## PTSD and Suicide Screener (PSS)

John Briere, PhD

The PSS is helpful in determining PTSD and suicide risk for individuals exposed to a variety of traumas, including childhood abuse, adult sexual or physical assaults, disasters, motor vehicle accidents, shootings and stabbings, burns, life-threatening illnesses, invasive medical procedures, and events associated with military deployment. The PSS consists of two scales: PTSD Risk (PR) and Suicide Risk (SR). The PR scale consists of eight items from the DAPS that, together, tap into aspects of all PTSD symptom clusters in both the DSM-IV-TR™ and the DSM-5™ and best predict PTSD status. Reliability analyses indicated that both PR and SR scales are internally consistent, with alpha coefficients of .87 and .91, respectively.

## Differential Scales of Social Maladjustment and Emotional Disturbance (DSSMED)

David J. Ehrler • Ronnie L. McGhee • Carol G. Phillips • Elizabeth A. Allen

The Differential Scales of Social Maladjustment and Emotional Disturbance (DSSMED) is a 46-item, norm-referenced teachers' rating scale that can be used to identify students with socio-emotional disturbance. The DSSMED is used primarily to differentiate between students with social maladjustment and those with emotional disturbance. The DSSMED is normed on a national sample of 1,337 students and has proven reliability and validity. Teachers, school psychologists, or other knowledgeable professionals rate the items on a 5-point Likert-like scale. Ideally, the examiner should be someone who has had regular, daily contact with the student in a school setting for at least four weeks. It takes approximately 10 minutes to rate a student's observed emotional behavior. Results of the DSSMED can be used as part of a pre-referral/referral tool to identify "at risk" students and to assist with education programming decisions.

## Chronic Pain Coping Inventory™ (CPCI™)

**Mark P. Jensen, Paul Karoly, Judith A. Turner, Joan M. Romano, Warren R. Nielson and PAR Staff**

The CPCI/SOPA-SP designed to assess the use of coping strategies that are typically targeted for change in multidisciplinary pain treatment programs, the CPCI can be used as a treatment outcome measure, as a screening measure, and to document the necessity of treatment. CPCI software score and generate reports for both the CPCI and the SOPA. After the examiner enters the client's demographic information and CPCI or SOPA item responses or scale raw scores, the program generates two useful and informative reports for each test: The CPCI Score Report and The CPCI Longitudinal Report.

## PRODUCT OVERVIEW

## Reynolds Child Depression Scale™ –2nd Edition (RCDS™-2)

**William M. Reynolds**

Designed to screen for depression in children, the RCDS-2 retains the 30 items used in the original measure but presents updated normative data. Children are asked to answer questions about how they have been feeling during the past 2 weeks. All items are worded in the present tense to elicit current symptoms status. A short form, ideal for screening, is also available.

### Features and Benefits

- Appropriate for children ages 7-13 years.
- No scoring key is needed—the RCDS-2 form is presented in a convenient carbonless form. All scoring and administration information is presented in the brightly colored Test Booklet.
- A new standardization sample of students drawn from 11 states is stratified to match U.S. Census statistics for gender and ethnic background. T scores and percentile ranges are provided for the total standardization sample, by gender, by grade, and by gender for each grade.
- Maps onto the symptoms of depressive disorders outlined in the DSM-IV™.

## Reynolds Depression Screening Inventory (RDSI)

**William M. Reynolds and Kenneth A. Kobak**

The RDSI is a self-report measure designed to quickly assess symptoms of depression in adults. The RDSI items assess the contemporary symptoms of depression specified by the DSM-IV™ for Major Depressive Disorder. Although the RDSI does not provide a formal DSM-IV diagnosis, clinicians can use the empirically derived cutoff scores to identify those individuals who may be at-risk for more serious, diagnostic forms of depression. The RDSI development sample consisted of 855 adults: 531 nonreferred community adults and 324 psychiatric outpatients, including 150 outpatients diagnosed with Major Depression. The RDSI Professional Manual provides normative data based on a sample of 450 nonreferred community adults.

## Beck Scale for Suicide Ideation (BSS)

**Aaron T. Beck**

The BSS measures attitudes and behaviors that clinicians routinely consider when assessing a patient's suicide risk. Reveals specific suicidal characteristics that require greater clinical scrutiny. Can be administered with the BDI®-II and the BHS® for a more complete evaluation. Five screening items reduce the length and the intrusiveness of the questionnaire for patients who are nonsuicidal. Full scale consists of 21 test items.

## Adolescent Anger Rating Scale™ (AARS™)

DeAnna McKinnie Burney

The AARS is a 41-item psychometrically sound instrument that assesses the intensity and frequency of anger expression in adolescents. The items are consistent with behaviors identified in the DSM-IV™. Elevated AARS scores can help to identify adolescents who are at risk for diagnoses of Conduct Disorder (CD), Oppositional Defiant Disorder (ODD), or Attention-Deficit/Hyperactivity Disorder (ADHD). Individuals indicate which behaviors they exhibit when angered and how often each behavior typically occurs; the 4-point response scale ranges from Hardly Ever to Very Often. Scores are reported for Total anger and for three subscales measuring aspects of the adolescent's typical anger response pattern: Instrumental Anger, Reactive Anger, and Anger Control. The goal of any anger intervention program is to help the adolescent manage his or her anger. Practitioners using the AARS will be able to select the most appropriate intervention program for the specific type(s) of anger the adolescent typically experiences.

### PRODUCT OVERVIEW

Product Code: 20-1503-KT

₹: 31,395.00

Age Range: 11 - 19 yrs

Time Taken: 5 - 10 minutes for individuals; 10 - 20 minutes for groups

Administration: Individual/Group

## Multidimensional Anxiety Questionnaire (MAQ)

William M. Reynold

The MAQ Total scale allows for a reasonably comprehensive evaluation of an individual's level of anxiety based on this brief self-report. The four symptom domains assessed are Physiological-Panic (12 items), Social Phobia (9 items), Worry-Fears (10 items), and Negative Affectivity (9 items). The MAQ Total scale also provides a cutoff score to assist in identifying individuals likely to have a clinically relevant level of anxiety symptomatology. As a specific measure of anxiety, the MAQ is useful in clinical situations either by itself or as part of a broader psychopathological assessment battery. It can be used in private practice, hospitals, or other clinical settings, and can be especially valuable in general medical settings, such as HMOs, where research suggests a significant proportion of general care patients demonstrate clinical levels of anxiety or anxiety disorders that often go on unrecognized and untreated. The MAQ is also well adapted for use in college settings.

## Hospital Anxiety and Depression Scale (HADS)

Phillip Snaith and Anthony S. Zigmond

HADS measures depression and anxiety in and outside hospital and community settings. It also contains an easy-to-use questionnaire, which allows you to establish the presence and severity of both anxiety and depression simultaneously, whilst giving a separate source for each.

- gives cut-off points to indicate whether someone is 'within the normal range', or in a 'mildly', 'moderately' or 'severely' disordered state.
- contains two scales that give an estimate of irritable mood disorder and help identify particular areas of anxious concern (manual)

## Detailed Assessment of Posttraumatic Stress (DAPS)

John Briere

The DAPS is a 104-item, detailed, and comprehensive clinical measure of trauma exposure and posttraumatic stress. The instrument assesses peri- and posttraumatic symptoms (e.g., intrusion, avoidance, hyperarousal) and associated features (e.g., dissociative symptoms, substance abuse, suicidality) related to a specific traumatic event and generates a tentative diagnosis of Posttraumatic Stress Disorder (PTSD) or Acute Stress Disorder (ASD) in considerably less time than is required for a structured diagnostic interview. The diagnosis can then be confirmed by a clinical interview. The DAPS assesses both current and lifetime history of DSM-IV-TR trauma exposure, as well as the severity and clinical significance of an individual's posttraumatic symptoms, including dissociative, cognitive, and emotional responses.

## Beck Youth Inventories 2nd Ed. (BYI-II)

Judith S Beck, Aaron T Beck, John Jolly and Robert Steer

The five inventories each contain 20 questions about thoughts, feelings, and behaviors associated with emotional and social impairment in youth. Children and adolescents describe how frequently the statement has been true for them during the past two weeks, including today. The instruments measure the child's or adolescent's emotional difficulties, disruptive behavior and social impairment in five specific areas: Depression, Anxiety, Anger, Disruptive Behavior & Self-Concept.

## Beck Depression Inventory II (BDI-II) COMPLETE KIT+Reg Kit

**Aaron T Beck, Robert A Steer and Gregory K Brown**

You can assess depression with the Beck Depression Inventory®—II (BDI®—II), which is in line with the depression criteria of the Diagnostic and Statistical Manual of Mental Disorders—Fourth Edition (DSM-IV). This new edition of the Beck Depression Inventory®, the most widely used instrument for detecting depression, takes just five minutes to complete and is more clinically sensitive than ever. This BDI-2 consists of 21 items to assess the intensity of depression in clinical and normal patients. Each item is a list of four statements arranged in increasing severity about a particular symptom of depression.

## Aggression Questionnaire (AQ)

**Arnold H. Buss and W. L. Warren**

This self-report inventory makes it possible—and practical—to routinely screen children and adults for aggressive tendencies. The Aggression Questionnaire (AQ) measures an individual's aggressive responses and his or her ability to channel those responses in a safe, constructive manner. Because it takes just 10 minutes to complete, the AQ can be administered quickly to large numbers of people.

## PRODUCT OVERVIEW

## Student's Stress Scale

**Dr. Manju Aggarwal**

The present scale is a culturally appropriate scale for University students to assess their level of distress. This scale measures those dimensions which have been empirically found to be predictors of strain. The scale scores will help the parents and teachers to identify the major source of stress and areas requiring emotional and professional support for students/children. The scale consists of 64 life events items that have to be on a 7-point rating scale. It has nine sub scales: Financial, Family, Social Education, Ego-Threat, Bereavement, Separation, Personal Setback, Health of Others

## Trauma and Attachment Belief Scale (TABS)

Laurie Anne Pearlman

Previously known as the Traumatic Stress Institute, (TSI) Belief Scale, this highly useful new instrument assesses the long-lasting psychological impact of traumatic life events. The TABS helps clinicians design the most effective therapeutic approach for individual trauma survivors as well as important themes that characterize the client's relationships--often including the therapeutic relationship. Assess 5 areas sensitive to the effects of trauma. Composed of 84 items, the TABS is a self-report, paper-and-pencil test. It assesses beliefs--about self and others--that are related to five needs commonly affected by traumatic experience: Safety, Trust, Esteem, Intimacy, Control.

## Marital Satisfaction Inventory, Revised (MSI-R)

Douglas K. Snyder

Widely used to assess the nature and extent of conflict within a marriage or relationship, the MSI-R helps couples communicate hard-to-express feelings, providing an easy, economical way to gather information about a broad range of issues. And, because the items refer to "partner" and "relationship" rather than "spouse" and "marriage," the test is useful with both traditional and nontraditional couples. Each partner responds to 150 True-False items (129 if the couple has no children), which cover the following dimensions of marital interaction: Affective Communication, Role Orientation, Problem-Solving Communication, Aggression, Family History of Distress, Time Together, Dissatisfaction With Children, Disagreement About Finances, Conflict Over Child Rearing, Sexual Dissatisfaction and Global Distress.

### PRODUCT OVERVIEW

## Multiple Anxiety Inventory

Dr. Vishal Sood, Dr. Arti Anand and Tarun Mehta

The scale is designed to measure different types of anxieties namely Self Anxiety, Death Anxiety and Social Anxiety among school and college students. This scale contains eighty (80) items with 6 positive and 74 negative type items. Each item is ranked on the five point Likert scale. The dimensions will be interpreted on the basis of raw and Z-scores.

## Novaco Anger Scale and Provocation Inventory

Raymond W. Novaco

Initially developed in conjunction with the MacArthur Foundation Network on Mental Health and Law, the NAS-PI helps clinicians and researchers evaluate the role of anger in various psychological and physical conditions. Brief and easy-to-administer, this self-report questionnaire is an excellent way to assess anger in clinical, community, and correctional settings. The NAS-PI is composed of two parts: The Novaco Anger Scale (60 items), which tells you how an individual experiences anger; and the Provocation Inventory (25 items), which identifies the kind of situations that induce anger in particular individuals.

## Suicide Probability Scale (SPS)

John G. Cull and Wayne S. Gill

The Suicide Probability Scale (SPS) gives clinicians a rapid, accurate, and empirically validated measure of suicide risk in adults and adolescents over 13 years of age. Quick and cost-effective, the SPS permits routine screening in any high-risk setting. The scale is composed of 36 items that describe particular feelings and behaviors. The respondent indicates how often each statement applies to him or her, using a 4-point scale. The test form does not mention suicide in its title. The SPS generates three summary scores a total weighted score, a normalized T-score, and a Suicide Probability Score which give an overall indication of suicide risk.

## Conflict Tactics Scales

**Murray A. Straus, Sherry L. Hamby, Sue Boney-McCoy, David B. Sugarman, David Finkelhor, David W. Moore, and Desmond K. Runyan**

The Conflict Tactics Scales (CTS) have been used for decades to evaluate violence within families and intimate relationships. The widespread use of these scales has resulted in a proliferation of adapted forms and some confusion about their clinical and research application. This Handbook clarifies the situation by compiling and organizing—in a single source—the large body of information about the CTS. In addition, it presents two updated versions of the instrument that serve as standard forms.

## Trauma Symptom Inventory™-2(TSI™-2)

**John Briere**

A broadband measure, the TSI-2 is designed to evaluate posttraumatic stress and other psychological sequelae of traumatic events, including the effects of sexual and physical assault, intimate partner violence, combat, torture, motor vehicle accidents, mass casualty events, medical trauma, traumatic losses, and childhood abuse or neglect.

### Features and benefits

Three scales (Insecure Attachment, Somatic Preoccupations, and Suicidality) and several subscales, as well as four summary factors (Self-Disturbance, Posttraumatic Stress, Externalization, and Somatization), are new or have been significantly reconfigured.

New items assess clients' tendencies to deny symptoms that are commonly endorsed, to overendorse unusual or bizarre symptoms, or to respond in a random manner; the instrument now addresses malingering.

## PRODUCT OVERVIEW

## The Stress Profile

**Kenneth M. Nowack**

The Stress Profile quickly identifies individual characteristics and behaviors that protect against or contribute to stress-related illness. In just 20 minutes, the Stress Profile measures all personal traits and lifestyle habits that have been shown to moderate the stress-illness relationship. It is ideal for both clinical and organizational use—for behavioral health or executive coaching programs. This convenient self-report inventory provides scores in 15 areas related to stress and health risk: Stress, Cognitive Hardiness, Health Habits, Coping Style, Exercise, Rest/Sleep, Eating/Nutrition, Prevention, Positive Appraisal, Negative Appraisal, Threat Minimization, Problem Focus, Social Support, Psychological Well-Being and Type A Behavior.

## Emotional Disturbance Decision Tree™ (EDDT™)

**Bryan L. Euler**

The EDDT-PF offers school/clinical professionals a standardized approach to gathering parent information about children's functioning in the areas that make up the federal ED criteria. It allows an assessment of ED criteria and related issues that, when considered with data from the EDDT Teacher Form, promotes a comprehensive assessment of the student across school and home environments. Clusters, including Attention-Deficit Hyperactivity Disorder, Possible Psychosis/Schizophrenia, and Social Maladjustment, gauge subject-specific behaviors or possible comorbidities. The Level of Severity Cluster provides an indication of the severity of emotional-behavioral problems a child is facing, and the Motivation Cluster and the Resilience Scale measure student strengths.

## Rogers Criminal Responsibility Assessment Scales (R-CRAS)

**Richard Rogers**

The R-CRAS provides the forensic psychologist or psychiatrist with an empirically based approach to evaluating criminal responsibility. This instrument allows you to quantify the impairment at the time of the crime, to relate the impairment to the appropriate legal standard, and to render an expert opinion with respect to that legal standard. Part I establishes the degree of impairment on psychological variables significant to the determination of insanity. Part II aids in rendering an accurate opinion on criminal responsibility with the ALI standard, and also includes experimental decision models for guilty-but-mentally-ill (GBMI) and M'Naghten standards.

## Structured Interview of Reported Symptoms, 2nd Ed.

**Richard Rogers, Kenneth W. Sewell and Nathan D. Gillard**

The SIRS was designed for the assessment of feigning, including a scale to assess defensiveness; the content of each scale varies so that endorsement of items on a particular scale does not reflect any specific mental disorder. Each scale produces useful information on how a particular client may distort or fabricate his or her symptoms. The primary focus of the SIRS-2 is on the evaluation of feigning and the manner in which it is likely to occur, such as an exaggeration of symptom severity rather than a fabrication of symptomatology.

## PRODUCT OVERVIEW

## Uniform Child Custody Evaluation System

**Harry L. Munsinger, and Kevin W. Karlson**

The UCCES was developed to meet the need for a uniform custody evaluation procedure for mental health professionals. The UCCES consists of a Manual and 25 forms that provide a systematic method for gathering the data necessary to determine a child's best interest, organising information, presenting relevant data in an organised and logical manner, writing logical evaluation reports, and testifying in court.

## Evaluation of Competency to Stand Trial™ - Revised (ECST™-R)

Richard Rogers, Chad E. Tillbrook, and Kenneth W. Sewell

The ECST-R is a semistructured interview designed to assess dimensions of competency to stand trial, with questions probing purported impairment and symptomatology specifically germane to competency issues. The ECST-R contains 18 items and three individual scales that assess separate dimensions of competency to stand trial: Factual Understanding of the Courtroom Proceedings, Rational Understanding of the Courtroom Proceedings, and Consult with Counsel. The ECST-R also includes 28 items and five scales for atypical presentation: Realistic, Psychotic, Nonpsychotic, Impairment, and Both (Psychotic and Nonpsychotic combined).

## Miller forensic Assessment of Symptoms Test

Holly A. Miller

The M-FAST is a brief 25-item screening interview for individuals ages 18 years and older that provides preliminary information regarding the probability that an individual is feigning psychiatric illness. Most malingering and symptom validity instruments assess malingered cognitive and/or neuropsychological deficits. The M-FAST focuses exclusively on malingered psychiatric illness. The seven M-FAST scales operationalize response styles and interview strategies that have been demonstrated to successfully identify individuals who are attempting to feign psychology: Reported vs. Observed (symptoms) (RO), Extreme Symptomatology (ES), Rare Combinations (RC), Unusual Hallucinations (UH), Unusual Symptom Course (USC), Negative Image (NI), and Suggestibility (ES).

### PRODUCT OVERVIEW

## The MacArthur Competence Assessment Tool Criminal Adjudication

Steven K. Hoge, Richard J. BonnieB, Norman G. Poythress and John Monahan

The MacCAT-CA is a 22-item structured interview for the pretrial assessment of adjudicative competence. This instrument uses a vignette format and objectively scored questions to standardize the measurement of three competence-related abilities. Understanding capacity for factual understanding of the legal system and the adjudication process. Reasoning ability to distinguish more relevant from less relevant factual information and ability to reason about the two legal options: pleading guilty or not guilty. Appreciation capacity to understand his or her own legal situation and circumstances.

## Structured Inventory of Malingered Symptomatology™ (SIMS™)

Glenn P. Smith, Professional Manual by Michelle R. Widows and Glenn P. Smith

The SIMS is a 75-item, true/false screening instrument that assesses for both malingered psychopathology and neuropsychological symptoms. The instrument reduces clinician burden and increases assessment efficiency by serving as a screen for malingering and by reducing hands-on administration time. In addition to serving as a screening measure, the SIMS can be used as part of a battery of tests providing convergent evidence of malingering, rather than relying on a single instrument for diagnosis. The SIMS also is recommended as part of a comprehensive approach to evaluation alternative hypotheses for response patterns are to be considered.

# BIOFEEDBACK

## GSR BI GSR BIOFEEDBACK "BIOTRAINER" (16-3127-KT)

₹ 99,990.00

In uneasiness, anxiety and tension sympathetic nerve system is tensed, perspiration increases and GSR (galvanic skin resistance) drops GBF-2000 helps trainee perform self-control over emotional responses leading to relaxation. Perspiration decreases and GSR rises

## TEMPERATURE BIOFEEDBACK "BIOTRAINER" (16-3128-KT)

₹ 99,990.00

An increasing stress causes peripheral blood vessels to constrict, lessening blood flow to the hands and feet thus lowering extremity temperature. For those who experience the discomfort of cold hand and feet or headache when under stress caused by constricted blood vessels in the head Temperature biofeedback is most useful.

## EMG BIOFEEDBACK "BIOTRAINER" (16-3129-KT)

₹ 99,990.00

Tension headaches are caused by muscle contractions of the scalp, face and neck. An essential step towards preventing and curing the tension headache is to learn how to relax these muscles. Different techniques are used to teach muscle relaxation. The most successful results have been obtained by using EMG BIOFEEDBACK.

## PULSE BIOFEEDBACK "BIOTRAINER" (16-3130-KT)

₹ 99,990.00

Pulse biofeedback is the process of monitoring and displaying an individual ongoing heartbeat. Its most common clinical application is to control dangerous heartbeat irregularities by force of mental discipline alone. It is important to control tachycardia and these irregularities or PVC's (Premature Ventricular Contractions) as their presence is associated with an increased probability with an increased probability of sudden death.

## RESPIRATION BIOFEEDBACK "BIOTRAINER" (16-3131-KT)

₹ 99,990.00

A highly sensitive movement suspended above the area of the greatest respiratory scans the patients breathing rhythm. The RBF-8000 amplifies the minimal electrical impulses converting them in to two signals optical (lamps) and acoustical. Both signals develop in strict synchronization with in and exhalation. During inhalation brightness of the lamps and the volume of the sound increases while the lamps glow dimmer and the sound volume softer during inhalation. The Patient lies on the coach and he/she is instructed to concentrate on the slow. Soothing rhythm of his/her own breathing.

## ECG BIOFEEDBACK "BIOTRAINER" (16-3132-KT)

₹ 99,990.00

The applications specifications and uses of ECG Biofeedback is the same as that of Pulse Biofeedback. The signal is detected from the QRS wave of ECG. The OUTPUT is provided for all the leads i.e. i,ii,iii, AVR, AVL, AVF and chest.

## EEG (ALPHA) BIOFEEDBACK "BIOTRAINER" (16-3133-KT)

₹ 99,990.00

By learning to enhance the generation of EEG (Alpha) activity, the subject suffering from a chronic mental posture contributing a component of Psychosomatic or Psychological disorder can cultivate a more normal mental posture. An integrator mode is provided for knowing quantitatively the improvement of the subject. In integrator mode, the EEG (Alpha) keeps accumulating during a set period of time.

## MEDLEC (ELECTRO SLEEP) APPARATUS (16-3134-KT)

₹ 59,000.00

Small-modulated electrical impulses applied to the skull with a synchronized audio stimulus. The therapy is pleasant and useful to those patients with increased Psychomotor activity i.e. Anxiety States, Tension States and the cases of Insomnia, Migrain, Tension headache, Hysteria, Obsessional neurosis, Phobic States and Hypocandriasis. Cases of Insomnia, Migrain and Tension Headache respond well. Insomnia cases are in deadly treated at their normal bedtime to re-establish a normal sleep pattern. In the field of Physical ailments it is beneficial in Asthma, Colitis, Gastric, Ulcers & Eczema where a psychogenic factor is involved.

## MULTI BEHAVIOUR THERAPY (16-3135-KT)

₹ 99,990.00

It is a combination of Sex Therapy, Electro Sleep, Brain Polariser and Aversion Therapy in a single unit i.e. four in one with auto cut off timer. Sex Therapy: Sex Therapy instrument adopts a treatment strategy for sexual dysfunctions arising out of Psychological factors. Brain Polarizer: Used to treat for depression even in those cases where drugs & E.C.T. fail. Aversion Therapy: The Therapy used for de-addiction by applying electrical Stimulus to the Addictive.

## ASEBA CBCL Preschool (1.5- 5 yrs) Computer-Scoring / Hand Scoring Kit

Thomas M. Achenbach & Leslie A. Rescorla

The empirically based syndromes scored from the CBCL/1½-5 and C-TRF reflects actual patterns of problems derived from factor analyses that were coordinated between the two instruments. The CBCL/1½-5 also has a Sleep Problems syndrome. Both forms have parallel Internalizing, Externalizing, and Total Problems scales and a NEW Stress Problems scale. An especially valuable feature of the CBCL/1½-5 is the Language Development Survey (LDS), which uses parents' reports to assess children's expressive vocabularies and word combinations, as well as risk factors for language delays.

## ASEBA CBCL School Age(6 - 18 yrs) Computer-Scoring/Hand Scoring Kit

Thomas M. Achenbach & Leslie A. Rescorla

This displays problem-scale profiles and cross-informant bar graphs in relation to multicultural (including U.S.) norms. Different norms can be selected for a child's CBCL, TRF, and YSR scores. If the norms are unavailable for a society, you can elect default norms or other norms deemed appropriate for the child. The Module includes the following scales added in 2007: Obsessive-Compulsive Problems, Posttraumatic Stress Problems, Sluggish Cognitive Tempo (not on YSR), and Positive Qualities (YSR only). The Multicultural Supplement fully documents the multicultural norms and scales added in 2007.

## ASEBA Adult Self-Report Computer-Scoring / Hand Scoring Kit

Thomas M. Achenbach & Leslie A. Rescorla

The Adult Self-Report (ASR) obtains adults' self-reports of diverse aspects of adaptive functioning and problems. The Adult Behavior Checklist (ABCL) is a parallel form for obtaining reports from people who know the adult well. Both forms are valuable for assessing adults in mental health, family therapy, forensic, counseling, medical, substance abuse, and other settings. The ASR and ABCL are especially valuable for assessing parents of children seen for mental health and family therapy services. By having parents complete ASRs to describe themselves and ABCLs to describe their partner, you obtain profiles that highlight crucial agreements and disagreements between parents' self-descriptions and other people's descriptions of their functioning. You can also compare parents' ASR and ABCL profiles with their children's ASEBA profiles.

## ASEBA Older Adult Self Report Computer-Scoring / Hand Scoring Kit

Thomas M. Achenbach, Paul A. Newhouse & Leslie A. Rescorla

The OASR obtains older adults' self-reports of diverse aspects of adaptive functioning and problems. The OABCL is a parallel form for obtaining reports from people who know the adult well. Greatly improve assessment in contexts such as: psychiatric and psychological evaluations; medical care, including routine care and evaluation of functioning following events such as strokes, falls, and illnesses; following significant life changes, such as loss of a loved one, moves to retirement communities, assisted living, and nursing homes; and evaluations before and after planned changes and interventions. Especially helpful to have forms completed at regular intervals, such as 2 months, to determine if functioning is improving, worsening, or stable.

## Mental Status Checklist Adult (Pkg/25)

John A. Schinka

Consists of 120 items typically included in a comprehensive mental status of exam of adults.

## Trauma Symptom Checklist for Young Children™ (TSCYC™)

John Briere

Because exposure to traumatic events (e.g., child abuse, peer assaults, community violence) is an unfortunate part of many children's lives, psychological tests for trauma effects have become an important part of the child-focused assessment battery. Eight years in the making, and tested by clinicians and researchers throughout North America, the TSCYC is a 90-item caretaker-report instrument, with separate norms for males and females in three age groups: 3-4 years, 5-9 years, and 10-12 years. Caretakers rate each symptom on a 4-point scale according to how often the symptom has occurred in the previous month. Unlike most other caretaker-report measures, the TSCYC contains specific scales to ascertain the validity of caretaker reports (Response Level and Atypical Response), as well as providing norm-referenced data on the number of waking hours the caretaker spends with the child in the average week (0-1 hours to Over 60 hours).

## Trauma Symptom Checklist for Children™ (TSCC™)

John Briere

The TSCC is a self-report measure of posttraumatic stress and related psychological symptomatology in children ages 8-16 years who have experienced traumatic events (e.g., physical or sexual abuse, major loss, natural disaster, or witness violence). The 54-item TSCC includes two validity scales (Underresponse and Hyperresponse), six clinical scales (Anxiety, Depression, Anger, Posttraumatic Stress, Dissociation, and Sexual Concerns), and eight critical items. The alternate 44-item version (TSCC-A) is identical to the TSCC, except it makes no reference to sexual issues (and has no Sexual Concerns scale) and includes seven Critical Items. This instrument is suitable for individual or group administration. Item responses on a 4-point scale are entered on the top page of the carbonless test booklet. Item responses are automatically transferred to the scoring page underneath, allowing for easy hand scoring. Profile Forms allow for conversion of raw scores to age- and sex-appropriate T-scores and graphing the results.

## Personal History Checklist Adolescent (Pkg/25)

Edward H. Dougherty and John A. Schinka

Designed for adolescents ages 13-17 years. Completed by the clinician or the client to facilitate the client history during intake.

### PRODUCT OVERVIEW

Product Code: 20-0012-KT

₹: 10,605.00

Age Range: 13 - 17 yrs

# Tests of Dyslexia

The First Comprehensive Dyslexia Assessment

## Dyslexia is complex Assessing for it doesn't have to be

The Tests of Dyslexia (TOD™) is the first comprehensive assessment of dyslexia, eliminating the need to use tests from different assessments. Linking dyslexia assessment to targeted interventions has never been more efficient and effective.

### Assessment areas covered:

- Spelling
- Reading Fluency
- Basic Reading Skills
- Orthographic Processing
- Reading Comprehension Efficiency
- Reasoning
- Phonics Knowledge
- Sight Word Acquisition
- Auditory Working Memory
- Visual Verbal Paired Associate Learning
- Vocabulary
- Decoding Efficiency
- Phonological Awareness
- Rapid Automatized Naming

### Benefits of the Tests of Dyslexia (TOD™):

- The first Comprehensive Dyslexia Assessment to include interventions tied to the assessment data.
- Suitable for all ages, the TOD offers age and grade-based tests, indexes, and composite scores.
- TOD-Early (Grades K-2; 5 years, 0 months-9 years, 3 months) and TOD-Comprehensive is for ages 6 years, 0 months-89 years, 11 months (Grade 1 through adulthood; 6 years, 0 months-89 years, 11 months)
- The screener provides a Dyslexia Risk Index score in 10-15 minutes
- This brief assessment can be given individually or in a group format by teachers or other professionals.

- Clothes – coat, shoes, sweater, jeans

## PRODUCT OVERVIEW

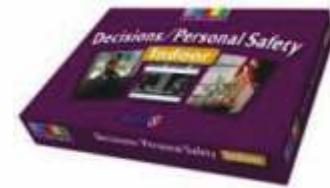

Product Code: 70-5002-CC  
 ₹: 6,490.00  
 Age Range: All ages  
 Contents: 36 A5 cards + booklet  
 Language: English

## Decisions / Personal Safety - Indoors

This set of ColorCards® illustrates a variety of everyday activities, situations and objects encountered that can easily cause danger and mishap if not considered as a potential hazard or used safely. Each card provides multiple opportunities for discussion and the accompanying booklet provides ideas for ways to use the cards both on a one-to-one basis and in a group or classroom situation.

Examples of cards included are:

- Candles lit near curtains
- Owning large dogs
- Sitting on an upstairs window ledge
- Very sharp knives left on the kitchen counter
- Personal hygiene
- Bleach in low store cupboard
- Cyber-safety

The cards can be used in a number of ways to encourage the development of decision making and having regard for safety issues. This could include discussion, role-play, storytelling and creative activities.

- Vocabulary work
- Classification
- Language development
- Story making
- Sequencing

## PRODUCT OVERVIEW

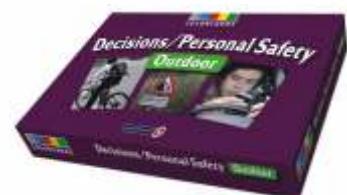

Product Code: 70-5003-CC  
 ₹: 6,490.00  
 Age Range: All ages  
 Contents: 36 A5 cards + booklet  
 Language: English

## Decisions / Personal Safety - Outdoors

Thinking through how to identify and deal with unexpected and potentially dangerous situations provides invaluable knowledge about possible and appropriate reactions. Understanding and acknowledging the need to consider this aspect of life will help students be prepared to mentally deal with some of life's challenges.

This set of cards features 36 different situations and dilemmas, including:

- Cycling on the road without a helmet and listening to music
- Picking up hitch hikers/being a hitch hiker
- Using a mobile phone whilst driving
- Building site dangers
- Stranger danger
- Dangerous dogs

The set is designed to encourage students to think logically, to use reasoning skills and to make prompt and rational decisions. This can be achieved through discussion, role-play, storytelling and creative activities.

The accompanying booklet provides details about the cards in the box as well as other activities and ideas for use.

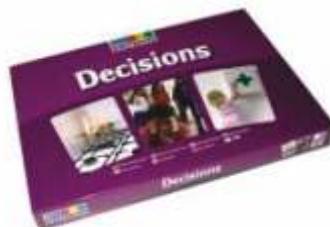

## PRODUCT OVERVIEW

Product Code: 70-5004-CC  
 ₹: 6,490.00  
 Age Range: 5+  
 Contents: 30 A4 (210 x 297mm) cards + CD + booklet  
 Language: English

## Decisions

Designed to encourage rational decision-making, this set of 30 photographic cards depicts unexpected or unwelcome situations, varying from minor difficulties like missing a bus, to dangerous predicaments such as finding a saucepan on fire. The set is designed to encourage children to use reasoning skills to make prompt and rational decisions. They will help children:

- Make responsible choices
- Develop independent thought
- Keep safe
- Understand the differences between minor difficulties and emergencies
- Realise that some problems are practical and that some include an element of social behaviour
- Know when there is danger or potential danger
- Understand that sometimes you should ask for help, sometimes take the initiative and walk away
- Find a balance between acting quickly and considering all aspects of a situation
- Recognise that there will be consequences of intervening and think about what might happen next.

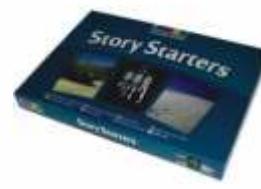

## Story Starters

Boost creative writing sessions with 30 A4 cards that provide an image for the opening of a narrative and can be expressed through storytelling, drama, poetry or prose. The cards are grouped into genres including:

- Real-life adventure • Travel • Mystery • Fantasy

Suggestions are related to each genre and some images link to more than one category. This resource includes a free CD-ROM to enable teachers to print off each card as required for individual pupils.

### PRODUCT OVERVIEW

Product Code: 70-5005-CC

₹: 6,490.00

Age Range: 5+

Content: 30 A4 (210 x 297mm) cards + booklet + CD

Language: English

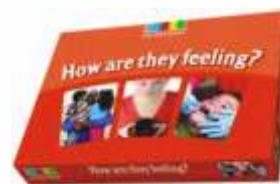

## How Are They Feeling?

A range of influential scenarios and activities that impact upon everyday life – such as moving house or cyber bullying. Relevant cards will spark a discussion on what is (or is not) portrayed as part of a conversation or storytelling session.

Scenarios depicted include:

- Parents arguing in front of daughter • Visit to the dentist • Feeding a pet • Attending a night club/concert/festival • Starting a race • Moving house • Cyber bullying • Having no money

The accompanying booklet gives guidance for how to use the cards effectively and the CD includes worksheets for each card.

### PRODUCT OVERVIEW

Product Code: 70-5007-CC

₹: 6,490.00

Age Range: 5+

Content: 30 cards, 297 x 210mm (A4), CD Rom + instruction booklet

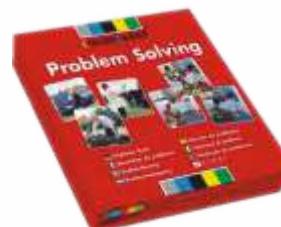

Language: English

## Problem Solving

How to solve everyday problems. There are three cards in each sequence; the first shows the problem, the second shows a possible solution, the third card introduces an alternative way of dealing with it. Situations include:

- Car broken down – try to repair it, ask where to get help
- Woman is unhappy as overweight – tries healthy eating, exercise
- Child is unhappy and bored – woman comforts her, woman takes her out
- Girl doesn't like her meal – leaves it, talks to the waiter
- Man cannot sleep – has a hot drink, reads a book
- Woman and girl argue – they sulk, they make up

The cards underline that problems should be approached logically, and that the chosen solution may influence later events and may not please everyone involved.

### PRODUCT OVERVIEW

Product Code: 70-5011-CC

₹: 6,490.00

Age Range: 5+

Content: 48 (148 x 148mm) cards + booklet

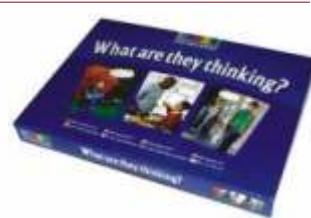

Language: English

## What are they thinking?

A creative resource for developing empathy, understanding feelings and recognising emotions.

The user imagines what the people depicted are thinking and how they may feel in a similar situation, then fills in the speech bubble. Designed to stimulate animated discussion or creative writing with all ages, the cards enable participants to:

- Focus on thinking • Explore the relationship between thoughts and feelings • Recognise that behaviour can affect others • Look at the influences on thoughts and feelings, of factors such as surprise, stress, anger and excitement.

### PRODUCT OVERVIEW

Product Code: 70-5014-CC

₹: 6,490.00

Age Range: 5+

Content: 30 A4 (210 x 297mm) cards + booklet + CD

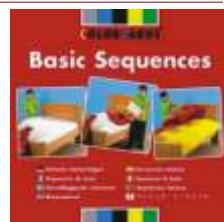

Language: English

## Basic Sequences

48 cards illustrating everyday activities in 3-step sequences. Use these three-step sequences to demonstrate simple sequentially related actions which will help establish basic concepts and encourage an understanding of order and direction.

The set of 16 three-step sequences portrays a range of everyday topics, including:

- Making a bed • Wrapping a present • Dressing a baby

### PRODUCT OVERVIEW

Product Code: 70-5008-CC

Contents: 48 (148 x 148mm) cards + booklet

Language: English

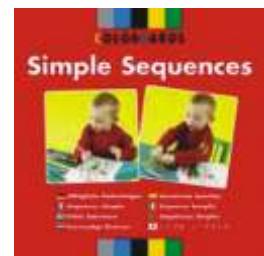

## Simple Sequences

48 cards depicting 2-step and 3-step sequences of everyday activities within the experience of most users. Includes twelve 2-step sequences such as:

- Cleaning teeth • Making jam tarts • Tidying the living room
- Packing a school bag

Eight further complex 3-step sequences include:

- Doing a jigsaw puzzle • Playing a computer game • Decorating a cake
- Riding a bike

## PRODUCT OVERVIEW

Product Code: 70-5015-CC

₹: 6,490.00

Age Range: All ages

Content: 36 A5 cards + booklet

Language: English

## More What are they thinking?

As with the original set of 'What are they thinking?' this collection of cards is designed to encourage users to focus on the thoughts and feelings they and other people experience when confronted with a situation.

Each card includes a 'thought bubble' to facilitate consideration of both what that individual is thinking and also the user's personal response.

Discussions about the appropriateness of the situation and of the best way to deal with it will all help to develop:

- Thinking skills • Understanding relationships • Problem solving • Social and emotional skills The cards cover a diverse range of circumstances, including:
- Difficult or dangerous situations • Team work
- Tests and achievement.

## PRODUCT OVERVIEW

Product Code: 70-5016-CC

₹: 6,490.00

Age Range: 11-18 Yrs

Content: 36 A5 cards + booklet + CD

Language: English

## Teen Issues

The 36 cards and worksheets in this pack provide a platform for lively discussion around the variety of key experiences and situations that young people encounter in the modern world.

Topics covered include:

- Relationships – parents and step families, siblings, friends, enemies, bullying • Lifestyle – diet and fitness, mental and physical health, self-esteem, addictions, body image • Safety – gaining independence, stress, bullying, gangs, cyber safety

• Life skills – money management, gambling, climate change, school workload, politics, making choices  
CD-ROM includes worksheets for each ColorCard.

## PRODUCT OVERVIEW

Product Code: 70-5018-CC

₹: 6,490.00

Age Range: 11-18 Yrs

Contents: 36 A5 cards + booklet

Language: English

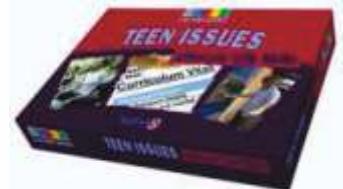

## Teen Issues - Lifestyle/ Life Skills

36 full colour, A5 cards portraying a variety of topics of concern to teenagers. Teenage life often requires decisions to be made in a variety of areas – these cards provide a vehicle to explore best options through discussion, role-play and other activities which are developed in the accompanying booklet.

Examples of cards in each group include:

Lifestyle: • Diet and fitness • Mental and physical health • Drug addiction • Eating disorders • Self esteem

Life Skills: • School workload • Money management • Career choices • Environmental concerns • Making responsible decisions Suitable for use during PSHE classes, or on a one-to-one basis to encourage discussion of a particular issue.

## Feelings

Happiness, sadness, anger, fear and more: this comprehensive card set illustrates the range of positive and negative feelings felt by children and adults. Children will be able to relate to the situations depicted that are designed to help them recognise and understand the significance of facial expressions and body language.

Use this set to focus on:

- The vocabulary of feelings and emotions
- Managing individual emotions
- How feelings may change in different situations
- How other people also have feelings and needs
- Non-verbal language
- Caring attitudes
- Feeling comfortable at home, at school and in social situations
- Good ways to listen, speak and behave
- A valuable addition to resources for SEAL

The large format makes these cards ideal for groups and circle time.

### PRODUCT OVERVIEW

Product Code: 70-5021-CC

₹: 6,490.00

Age Range: 5+

Contents: 48 A4 (210 x 297mm) cards + booklet

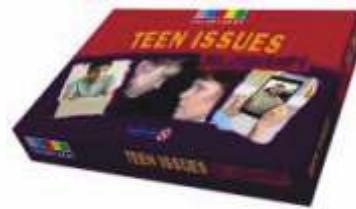

Language: English

## Teen Issues - Relationships

This set of cards considers a wide range of different types of relationships that may be encountered and are grouped in the following way to identify associated issues for discussion:

- Family connections
- Non-family relationships
- Relationship events
- Communication in relationships
- Personal identity

The accompanying booklet details how the images could be used within this framework and also provides two sample questionnaires and discussion points.

### PRODUCT OVERVIEW

Product Code: 70-5017-CC

₹: 6,490.00

Age Range: 11-18 Yrs

Content: 36 A5 cards + booklet

Language: English

Subjects illustrated on the cards include:

- Parental relationships
- Bullying
- Jealousy
- Lovesickness
- Cyber-bullying
- Online dating

The cards can be used for one to one discussions to tackle individual concerns or within PHSE lessons to highlight and inform on specific issues relevant to that curriculum.

## Emotions & Expressions 2 Color Cards

Sioban Boyce

This second set of emotion and expression cards provide an increased level of complexity to help tackle problems associated with children who have learned to talk but have not developed sufficient non-verbal understanding to enable them to hold effective conversations. Using the cards will enhance a child's ability to:

- Interpret facial expressions and body language
- Recognise the signals that indicate where people are
- Know what people might be doing, thinking, feeling or talking about
- Produce information relevant to the situation and people present
- Develop key observational skills
- Exhibit theory of mind – understand and empathise from another's perspective

The pack contains cards showing 4 different age examples of the following emotions – interested; sad; angry; kind; scared; worry; share; bored; pleased; confused; fed up.

# Ordering Information

## COPYRIGHT AND USE AGREEMENT

All materials in this catalogue are respectively copyrighted. Their reproduction or adaptation, in whole or in part without prior written permission from PPPL is a violation of copyright law. This policy applies to all tests and all test materials, including quoted material found in manuals, brochures, or books. Signing the Qualification Form, submitting a completed order form or purchase order, or paying part or all of a PPPL invoice implies acceptance of these terms and conditions by the purchaser.

## LIMITED WARRANTY

PPPL guarantees that all materials offered for purchase are suitable and in usable quality, in accordance with applicable professional psychological standards, for their intended purpose. PPPL makes no other warranties regarding merchantability or fitness for a particular purpose. At PPPL's option, purchasers may obtain replacement materials or a refund on all or a portion of the purchase price (based on usability of the test). PPPL is not responsible for any damages incurred in connection with a test or test materials, their use or misuse, scoring, or other services connected to test administration. PPPL is not liable for expenses incurred while using a test; for delays; for costs of substitute materials; or for possible lost income, grants, profits, or any damages. These conditions apply to all orders and may not be modified unless expressly agreed to in writing by PPPL.

## SHIPPING AND HANDLING

Shipping and handling charges include shipping, handling, and insurance for your order. Unless otherwise specified, orders will be shipped via courier service. Extra shipping charges may apply for extremely heavy items. International orders are shipped Duty and VAT collect.

## SHIPPING TIME

Orders placed Monday-Saturday before 4 p.m. IST will be shipped the same day (except holidays). All other orders will be shipped on the next business day. Due to unexpected delays (subject to unavailability of the product) and shipping time, PPPL recommends that you place orders at least 2 weeks prior to the time materials are needed.

## TERMS AND PRICES

Individuals must prepay their orders with a cheque, draft, NEFT/RTGS transfer or credit card. Companies, institutions, or other business entities within INDIA should use a purchase order. Prior approval from PPPL is necessary to establish the ability to use purchase orders. Purchase orders should specify that payment would be made in 30 days. Prices in the catalog are subject to change without notice. Contact PPPL for current prices or specify "Authorized to charge at current prices" on your purchase order. All orders must be paid in Indian Rupees. Individual order or orders from outside India must be prepaid.

## RETURN POLICY

PPPL accepts the return of any item purchased excluding distributors & reseller. For full Invoice credit in terms of credit note only (less if any shipping charges), please return the item with your invoice within 15 days purchase. Returns after 30 days require prior authorization and are subject to a 20% restocking fee. (PPPL also reserve the right to assess restocking charge for item return).

All return material must be in re-saleable condition. Return should be sent via trackable courier service to:

# DR. KRANTI APTITUDE BATTERY 2.0

Product Code: **16-6666-KT**

Age Range: **10 to 18 years**

Administration: **Group**

Format: **Online Test**

Language: **English**

Time: **55 to 60 minutes**

Content: **102 items with 4 responses**

## Description:

Indigenised scale for Indian students which assess aptitude across seven domains: Verbal Reasoning, Critical Reasoning, Numerical Aptitude, Spatial Aptitude, Clerical Aptitude, Abstract Reasoning, and Mechanical Aptitude.

# DR. KRANTI CAREER INTEREST SCHEDULE

Product Code: **16-5555-KT**

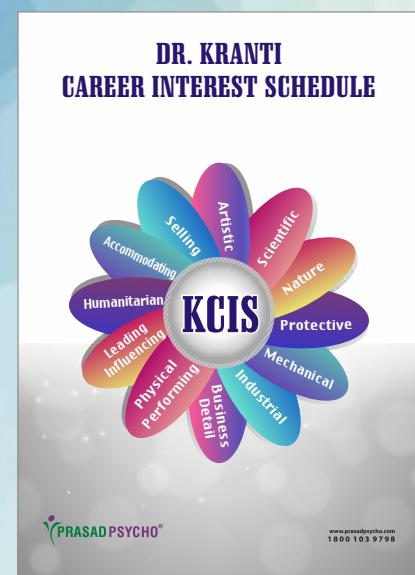

Age Range: **Grades 8 to 12**

Administration: **Individual/Group**

Price: **₹ 6990.00**

Language: **English**

Time: **30 to 45 minutes**

## Description:

**Dr. Kranti Career Interest Schedule** measures 12 interest factors directly related to the occupations listed in the Guide of Occupational Exploration. The factors are **Artistic, Scientific, Nature, Protective, Mechanical, Industrial, Business Detail, Selling, Accommodating, Humanitarian, Leading-Influencing, and Physical Performing**. KCIS contain items scored as Like, Neutral, or Dislike. Teachers, counselors, and other professionals can easily use the **KCIS** to assist in the career development of students.

# VIRTUAL REALITY THERAPY PLATFORM

## Heal Phobia and PTST in a controlled & Safe Virtual Environment

## Assessment Solution for Professionals

**Individual and Group Assessments**

**Seamless remote administration**

**Pay as you go**

**Ensured data privacy**

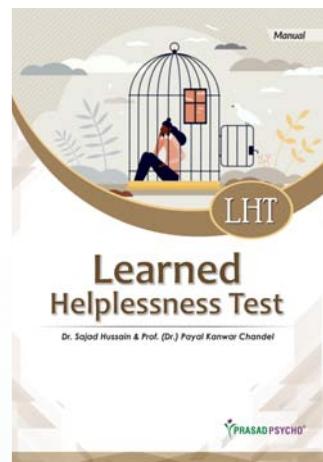

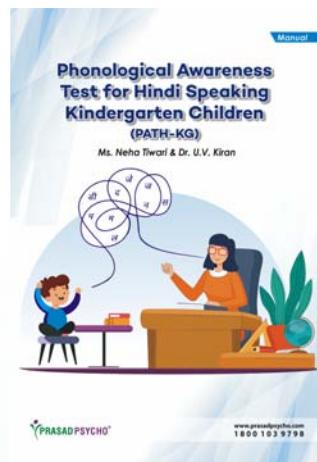

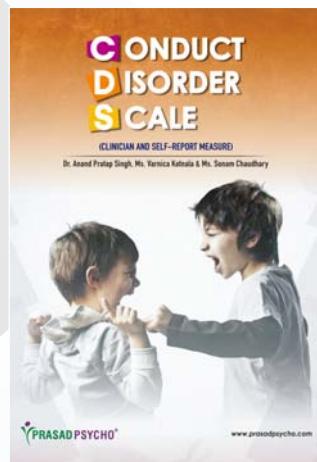

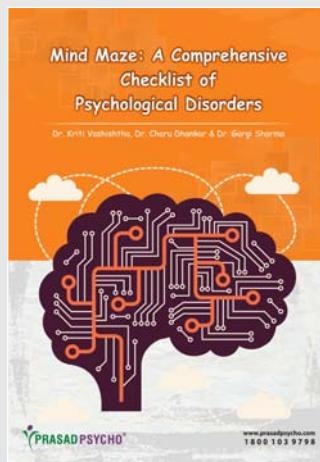

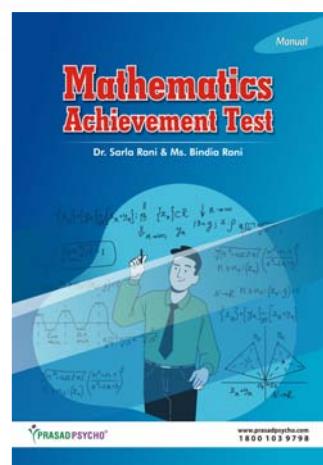

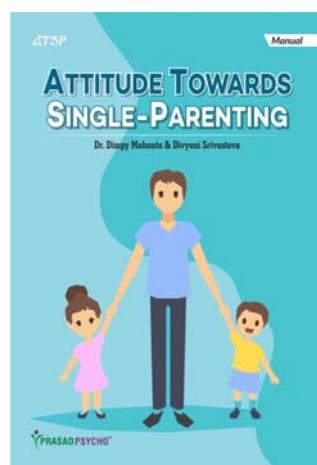

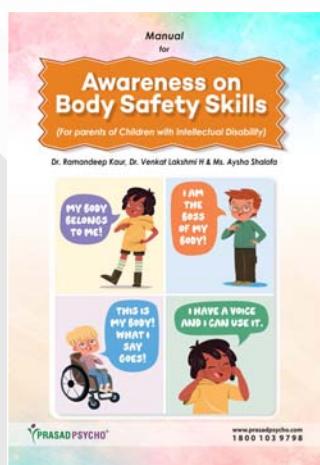

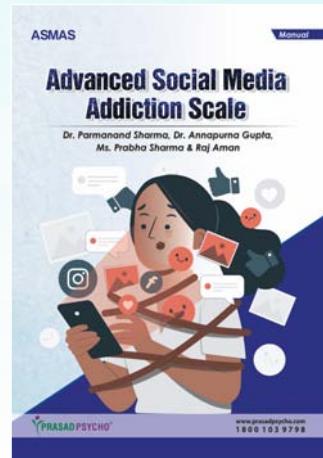

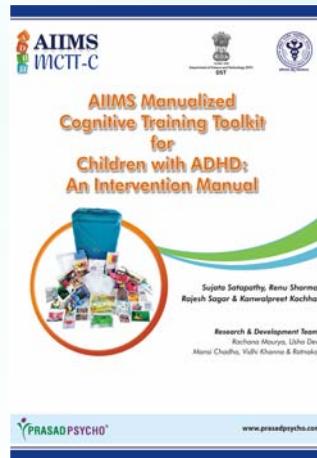

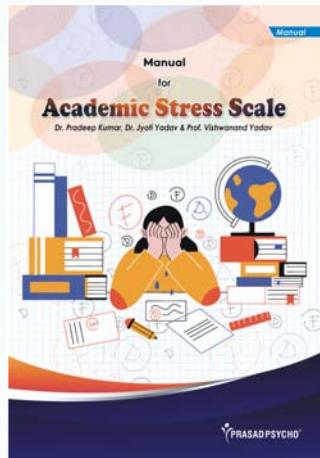

**Automated assessment reports**
